It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Technical assistance in applying BUSAN 30WB for microorganism control as described in the following is available upon request when a description of the problem is provided.

LEATHER: BUSAN 30WB is recommended for the prevention of mold, bacteria and fungi in the storage, transport and processing of wet leather stock such as pickled, vegetable-, chrome-, alternative metal or metal free tanned hides and skins. Dosages of 0.05-0.2% (250-1000 ppm) of BUSAN 30WB can be used on the white line stock weight basis to prevent microbial growth on processed hides and skins. The dosage level should be increased to 0.1-0.5% (500-2500 ppm) of BUSAN 30WB if pickled hides and skins are to be used. BUSAN 30WB is recommended for the control of microbial growth in the tanning process. It is particularly effective in preventing fungal growth. BUSAN 30WB can be mixed with other tanning agents or incorporated in the tanning mix prior to application. For example, BUSAN 30WB can be used in the pickling liquor, or to the tanning liquor at the start of the tanning process or to the rinse water in a post tanning refloat. The concentration of BUSAN 30WB required will vary with the degree of fouling. It should be added at a rate that will provide 10 to 30 parts per million BUSAN 30WB (weight/weight) of the waste water. This addition can be made at various points in the system including the influent to and effluents. The quantity of BUSAN 30WB required varies with the degree of fouling. For bacterial and fungal degradation of the fluids or muds used in the drilling of wells, BUSAN 30WB is incorporated in the drilling fluid at concentrations of 0.05 to 0.15% based on the total wet weight of the fluids.

WATER TREATMENT SYSTEMS: When used as directed, BUSAN 30WB controls bacteria and fungal slime in water waste systems and effluents. The quantity of BUSAN 30WB required varies with the degree of fouling. It should be added at a rate that will provide to 30 parts per million of bacteria and fungi in the waste water. This can be added after the clarification or the holding basins or ponds. Not registered for this use in California.

First Aid

If In Eyes - Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.

- Call a poison control center or doctor for further treatment advice.

If on Skin - Rinse skin immediately with plenty of water for 15-20 minutes.

- Call a poison control center or doctor for treatment advice.

If Inhaled - Move person to fresh air.

- If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth if possible.

- Do not give anything by mouth to an unconscious person.

If Swallowed - Do not induce vomiting unless told to do so by the poison control center or doctor.

- Rinse mouth and gargle.

- Call a poison control center or doctor for further treatment advice.
