Dipodomys merriami parvus

BARLEY

This product may be broadcast by hand, cyclone seeder, or ground-driven dispensing devices at rates of up to 10 lbs. (0.2 lb. active ingredient) per acre during crop dormancy. A maximum of 20 lbs. per acre (0.4 lb. ai/A) may be applied annually.

Washington. Do not graze animals in treated areas.

READ THIS LABEL:

ZP

Bait stations are mandatory for outdoor, above-ground use. Tamper-resistant bait stations must be used if children, pests, non-target mammals, or birds may access the bait.

Inside Burrows

For control of California ground squirrels (Dipodomys), white-footed mice (Microtus), and roof rats (Rattus). When the room contains only one burrow, apply as a 10–15 foot opening with sod, a rock, or soil to exclude light. Take care not cover bait with soil. Depending upon mound density, make two to five bait placements per burrow system. Recover and bury all spilled pellets. Applied in this manner, one pound of bait will treat 10 pounds of mounds per acre.

APPLICATIONS FOR BURROW TREATMENT

1. Observe burrows to determine the distance between runs, as well as entrance and exit points. Choose the run nearest the center of the burrow system as the starting point.
2. Make a 10–15 foot opening with sod, a rock, or soil to exclude light. Take care not cover bait with soil.
3. Depending upon mound density, make two to five bait placements per burrow system. Recover and bury all spilled pellets. Applied in this manner, one pound of bait will treat 10 pounds of mounds per acre.

BROADCAST BAITING:

This product may be broadcast by air or ground-driven dispensing devices along bushes, rock outcrops, and fence lines. Make up to 2 applications at a minimum interval of 25 days. A maximum of 12 lbs. per acre (0.24 lb. ai/A) may be applied per application. Reintroductions.

Cultural Measures

To reduce rodent infestations, avoid planting legumes, clover, and alfalfa in pastures and adjacent noncrop areas.

For control of California ground squirrels (Dipodomys), white-footed mice (Microtus), and roof rats (Rattus) in range land, pastures and adjacent noncrop areas. Also for control of Peromyscus leucopus (Stephan's Kangaroo Rat).

BROADCAST BAITING:

This product may be broadcast by air or ground-driven dispensing devices. Apply bait at a rate of up to 6 lbs./A (0.12 lb. ai/A). Make only one application per season. Reintroductions.

FOLLOW-UP:

Do not allow the area to cool off for one to two weeks after treatment until it is thoroughly dry. Edible food sources should be reduced as much as possible.

Safe Storage

Nonrefillable container. Do not reuse or refill this container. Offer for recycling, if available. Completely empty bag by shaking and tapping sides and bottom to loosen clinging particles.

Special Storage Handling

This product is a highly toxic bait that is lethal to mammals, birds, and other wildlife. It is intended for use in the control of black-tailed prairie dogs (Cynomys ludovicianus), flickertails (Spermophilus suslikus and S. armatus), pocket gophers (Thomomys bottae, T. talpoides, and the Merced subspecies of T. talpoides), and pack rats (Ochrotomys nuttalli). Use this product only for the control of these species in the following areas:

- In and around buildings and structures
- Uses associated with non-building agricultural sites
- Uses associated with buildings and structures to control normal rats, roof rats, and house mice
- Uses associated with non-structural agricultural sites

APPLICATION DIRECTIONS FOR RATS:
- Apply 1 to 2 teaspoon amounts of bait per placement in tamper-resistant bait stations. Maintain an uninterrupted supply of fresh bait until all signs of feeding have stopped. Do not treat the same area of less than 30 days.

APPLICATION DIRECTIONS FOR MICE:
- Apply 1 teaspoon of bait per placement, up to 12 foot intervals. For outdoor use, place bait in tamper-resistant bait stations. Maintain an uninterrupted supply of fresh bait until all signs of feeding have stopped. Do not treat the same area of less than 30 days.

FOLLOW-UP:
- Using water, gloves, and permission of the property owner. Do not dispose of equipment wash water or rinseate.

NOTICE: Do not use for domestic bronchial asthma and/or allergic reactions. Do not use in critical habitat within 6.3 miles (10 kilometers) of any prairie dog town to limit risks to the black-footed ferret from exposure to dibromochloropropane or dibromochloromethane.

DIRECTIONS FOR USE:
- Do not apply to areas open to hoofed livestock, raccoons, bears, other potentially commensal rodents, or birds.
- Do not dispose of equipment wash water or rinseate.

Disposal of Spilled and Excess Bait, and Careless Information Applicable for All Agricultural Uses

Spilled and Excess Bait: Weaning water, gloves, and permission of the property owner. Do not dispose of equipment wash water or rinseate.

Carcasses: Weaning water, gloves, and permission of the property owner. Do not dispose of equipment wash water or rinseate.

FRUIT AND NUTTREE ORCHARDS (DOMINANT)

VINES AND WHITE FOOTED MICE

USE RESTRICTIONS:
- For control of Meadow, Prairie, Pine, California (except for endangered subspecies), Amargosa, and the following California counties: Fresno, Kern, Kings, Merced, Monterey, San Benito, San Luis Obispo, Santa Barbara, and Tulare (California).

TRADEMARKS:
- Set equipment to drop one teaspoon amount of bait (4 grams) at 4-10 foot intervals in the artificial baits, one on each side of the fence row, and one at the corner of the fence row. Apply even amounts of bait on or near the bait station. Do not use on or near residential areas, or over water.

Disposal of Spilled and Excess Bait, and Careless Information Applicable for All Agricultural Uses

Spilled and Excess Bait: Weaning water, gloves, and permission of the property owner. Do not dispose of equipment wash water or rinseate.

Carcasses: Weaning water, gloves, and permission of the property owner. Do not dispose of equipment wash water or rinseate.

RESTRICTED USE PESTICIDE
Due to hazards to Non-target Species
For retail sale to and use only by Certified Applicators or persons under their direct supervision or under those covered by the Certified Applicator’s certification.

NON-RESIDENTIAL LAWNS, ORNAMENTALS, GOLF COURSES, AND PARKS
(continued from other panel)
for by pulling overlapping gosses over bait. Allow bait to fall to the ground in the surficial baits but do not apply bait to bare ground.

BAIL STATIONS: Place bait in barrier-resistant bail stations if children, pets, or non-target mammals or birds may access the bait.

POCKET GHOVER USE RESTRICTIONS:
For use of pocket gopher bait (Gopherus berlandieri), southeastern pocket gophers (G. holbrookii), western pocket gophers (G. externus), and yellow-footed pocket gophers (Thomomys talpoides) in non-residential lawns, ornamentals, golf courses, and parks.

TYPHONY PRODUCED FOR RAY
USE RESTRICTIONS:
For use of control of meadow voles, long-tailed voles, California voles (except for endangered subspecies), American voles, see section "ENHANCED SPECIES CONSIDERATION," Oregon voles, mountain voles, and Townsend’s voles (Microtus ochrogaster) in non-residential lawns, ornamentals, golf courses, and parks.

TYPHONY PRODUCED FOR RAY 2
USE RESTRICTIONS:
For use of control of meadow voles, long-tailed voles, California voles (except for endangered subspecies), American voles, see section "ENHANCED SPECIES CONSIDERATION," Oregon voles, mountain voles, and Townsend’s voles (Microtus ochrogaster) in non-residential lawns, ornamentals, golf courses, and parks.

Meadow vole, long-tailed vole, and Townsend’s vole populations can be controlled with the following materials.

USE RESTRICTIONS:
For control of meadow voles, long-tailed voles, California voles (except for endangered subspecies), American voles, see section "ENHANCED SPECIES CONSIDERATION," Oregon voles, mountain voles, and Townsend’s voles (Microtus ochrogaster) in non-residential lawns, ornamentals, golf courses, and parks.

USE RESTRICTIONS:
Control of meadow voles, long-tailed voles, California voles (except for endangered subspecies), American voles, see section "ENHANCED SPECIES CONSIDERATION," Oregon voles, mountain voles, and Townsend’s voles (Microtus ochrogaster) in non-residential lawns, ornamentals, golf courses, and parks.

USE RESTRICTIONS:
For control of California ground squirrels (Spermophilus beecheyi) and Richardson’s ground squirrels (S. richardsonii) in stone fruit (peach, cherry, apricot, plum, prune, nectarine) and nut tree orchards, in and around buildings, and other sites to control the species listed in the use directions.

ACTIVE INGREDIENT:
Zinc Phosphide (CAS 1243-144-7)  Two percent.
OTHER INGREDIENTS:  98%.

TOTAL 100%.

T o the extent consistent with applicable law, buyer assumes all risk of use and handling of this material when such sale or handling is contrary to local instructions.

STORAGE AND DISPOSAL
Do not contain vireo, vireo, or enter any bait into the ground, or use any livestock foraging activity. This use is restricted to Idaho, Oregon and Washington. Do not apply to actively growing timothy or timothy/tall fescue mixes. A minimum of 189 days must pass between an application of 29% Rodent Baits Agran and any livestock grazing activity. This use is restricted to Idaho, Oregon and the state of Washington.

Bait that is not used should be returned to the manufacturer.

Bait stations in the nursery are not used, the prongs will drop about 2 inches due to decreased resistance from soil.

Applying Bait to Runways: Using a long-handled spoon or mechanical probe, drop one teaspoon (4 grams) of bait at each end of runway. Cover opening with a rock, a soil, or seal with cut grass. Take care not to cover bait with soil. Dispersion by hand may result in increased organophosphate persistence in peritoneum. Bait must be applied directly into pocket gopher’s underground burrow systems or into underground tunnels created by burrow-building machines.

Baiting: Follow the directions indicated below to locate and treat pocket gopher burrow systems.

Location UnderGround Runways: Use a specially designed gopher probe, a metal rod, a strong smooth stick, or other suitable implement to probe the ground 10 to 15 inches away from the shaped gopher mound. Begin probing on the flat side of the mound.

When the main runway has been entered, the prongs will drop about 2 inches due to decreased resistance from soil.

Hand baiting: Build your manufacturer’s instructions for the type of equipment used. Cover bait equipment to drop a teaspoon quantity (4 grams) of bait at 4- to 6-foot intervals in the artificial burrow made by the machine. Apply at a rate of 0.2-0.3 lbs per acre (0.45-0.6 lb/A). Place up and dispose of all supplied baits according to "Pesticide Disposal" instructions.

ALFA LFA VOLES USE RESTRICTIONS:
For use of meadow voles, long-tailed voles, California voles (except for endangered subspecies), American voles, see section "ENHANCED SPECIES CONSIDERATION," Oregon voles, mountain voles, and Townsend’s voles (Microtus ochrogaster) in alfalfa. All applications must occur shortly after a cutting of the hay, and/or just prior to the new growth’s appearance. A safety zone for treated areas must not be harvested until it reaches maturity. This use is restricted to Montana, California, Idaho, Oregon, and Washington.

BroadCast: This product may be broadcast by air or ground-driven dispensing devices. Apply at a rate of up to 10 lbs per acre (2.2 lb/A). For voles, make two applications per year separated by a minimum interval of 10 days. Maximum of 200 lbs per acre (44.1 lb/A) may be applied per year. Do not apply by air if wind velocity exceeds 10 mph. Do not apply in piles or permit piles to be formed by equipment.

POCKET GHOVER USE RESTRICTIONS:
For use of pocket gopher bait (Gopherus berlandieri), southeastern pocket gophers (G. holbrookii), western pocket gophers (G. externus), and yellow-footed pocket gophers (Thomomys talpoides) in non-residential lawns, ornamentals, golf courses, and parks.

TYPHONY PRODUCED FOR RAY USE RESTRICTIONS:
For use of control of meadow voles, long-tailed voles, California voles (except for endangered subspecies), American voles, see section "ENHANCED SPECIES CONSIDERATION," Oregon voles, mountain voles, and Townsend’s voles (Microtus ochrogaster) in timothy during the non-growing season. Do not apply by air. Do not apply to actively growing timothy or timothy/tall fescue mixes. A minimum of 189 days must pass between an application of 29% Rodent Baits Agran and any livestock grazing activity. This use is restricted to Idaho, Oregon and the state of Washington.

TYPHONY PRODUCED FOR RAY 2 USE RESTRICTIONS:
For use of control of meadow voles, long-tailed voles, California voles (except for endangered subspecies), American voles, see section "ENHANCED SPECIES CONSIDERATION," Oregon voles, mountain voles, and Townsend’s voles (Microtus ochrogaster) in timothy during the non-growing season. Do not apply by air. Do not apply to actively growing timothy or timothy/tall fescue mixes. A minimum of 189 days must pass between an application of 29% Rodent Baits Agran and any livestock grazing activity. This use is restricted to Idaho, Oregon and the state of Washington.
GROUND SQUIRRELS
mounds in feeding runs within 3 ft of active burrow entrances.

Prebait mixture at 6 lbs per acre 2–3 days prior to using ZP® Rodent Bait Ag.

PREBAITING (Mandatory): Prebait with a 50/50 mixture of ground corn and wheat to enhance bait acceptance by Richardson's ground squirrels. Apply the prebait mixture at 6 lbs per acre 2–3 days prior to using ZP® Rodent Bait Ag.

BROADCAST BAITING: This product may be broadcast by air or ground-driven dispensing devices. Apply bait at a rate up to 6 lbs per acre (0.12 lb ai/A). Do not apply by air.

RANGELAND, PASTURES, and ADJACENT NONCROP AREAS

KANGAROO RATS

BAITING: Place one tablespoon (1/2 gram) of bait on both sides of opposite sides of mounds in feeding runs within 3 ft of active burrow entrances.

GROUND SQUIRRELS

USE RESTRICTIONS: For control of California ground squirrels (Spermophilus beecheyi) and Richardson's ground squirrels (S. richardsonii) in noncrop areas, pastures and adjacent noncrop areas. Product must not be applied on roads, near residential areas, over water or where plants are grown for food or feed.

PREBAITING (Mandatory): Prebait with a 50/50 mixture of ground corn and wheat to enhance bait acceptance by California and Richardson's ground squirrels. Apply the prebait mixture at 6 lbs per acre 2–3 days prior to using ZP® Rodent Bait Ag.

BROADCAST BAITING: This product may be broadcast by air or ground-driven dispensing devices at a rate of 6 lbs per acre (0.12 lb ai/A). Do not apply by air.

NONCROP RIGHTS-OF-WAY

USE RESTRICTIONS: For control of California ground squirrels (Spermophilus beecheyi) on noncrop rights-of-way adjacent to canal and ditch banks and other noncrop corridors during late spring and summer. 20% PreBait Rodent Bait Ag must not be applied on roads, near residential areas, over water or where plants are grown for food or feed.

PREBAITING (Mandatory): Prebait with a 50/50 mixture of ground corn and wheat to enhance bait acceptance by California ground squirrels. Apply the prebait mixture at 6 lbs per acre 2–3 days prior to using ZP® Rodent Bait Ag.

BROADCAST BAITING: This product may be broadcast by air or ground-driven dispensing devices at a rate of 6 lbs per acre (0.12 lb ai/A). Do not apply by air.

BUSHBERRIES AND CANEBERRIES

USE RESTRICTIONS: For control of meadow voles, prairie voles, and pine voles (Microtus spp.) in huckleberries (Vaccinium occidentale), currants (Ribes spp.), blackberries (Rubus spp.), gooseberries (Ribes spp.), and huckleberries (Vaccinium parvifolium). Do not apply by air or ground-driven dispensing devices at a rate of 6 lbs per acre (0.12 lb ai/A). Do not apply by air.

PREBAITING (Mandatory): Prebait with three pounds of untreated steamed crimped oats per acre one or two weeks prior to using toxic bait may enhance bait acceptance. Prebait at 6 lbs per acre 2–3 days prior to using ZP® Rodent Bait Ag.

IN-FURROW APPLICATION

USE RESTRICTIONS: For control of meadow voles, long-tailed voles, California voles (except for endangered subspecies), Amargosa vole (see section ENDANGERED SPECIES CONSIDERATION). Oregon vole, mountains voles (Thomas's vole) and Richardson's ground squirrels (Spermophilus richardsonii) in growing-season and preplant applications in barley. Do not apply this product to barley within 30 days of harvest. This use is restricted to Idaho, Oregon and Washington. Use of this product in barley within 90 days of harvest is prohibited.

BROADCAST BAITING: This product may be broadcast by air or ground-driven dispensing devices. Apply bait at a rate up to 6 lbs per acre (0.12 lb ai/A). Do not apply by air.

BEANS (Oryza sativa)

USE RESTRICTIONS: For control of prairie voles (Microtus ochrogaster), meadow voles (Microtus pennsylvanicus), house mice (Mus musculus), deer mice (Peromyscus maniculatus), white-footed mice (P. leucopus), Ord's kangaroo rats (Dipodomys ordii), banner-tailed kangaroo rats (D. mearnsi), and California voles (S. beecheyi) in noncrop borders during late spring and summer. ZP® Rodent Bait Ag must not be applied in noncrop borders during late spring and summer. ZP® Rodent Bait Ag must not be applied in noncrop borders during late spring and summer. ZP® Rodent Bait Ag must not be applied in noncrop borders during late spring and summer.

PREBAITING (Mandatory): Prebait with a 50/50 mixture of ground corn and wheat to enhance bait acceptance by Richardson's ground squirrels. Apply the prebait mixture at 6 lbs per acre 2–3 days prior to using ZP® Rodent Bait Ag.

BROADCAST BAITING: This product may be broadcast by air or ground-driven dispensing devices. Apply bait at a rate up to 6 lbs per acre (0.12 lb ai/A). Do not apply by air.
