DIRECTIONS FOR USE CONTINUED:

POULTRY HOUSING: For control of darkling beetles, lesser mealworms, and lice apply INSECTO to litter at a rate of 1 to 2 pounds per ton and top dress at 4 pounds per 100 square feet of surface area, side walls, and other areas within the poultry house. Where extensive infestation and/or high moisture levels exist in the litter an additional application of the feeder dose of INSECTO should be applied to the rate of 1 to 2 pounds per 100 square feet. Immediately after each new poultry batch and/or additional litter material is recommended.

PEST CONTROL AROUND THE HOUSE: Lightly coat the area (10 oz. per 1,000 sq. ft.) released with Amo, Poches, Flies, Silver Fish Lure, Water Bugs, and Mites.

FOOD AND FEED AREAS: In areas where food or feed is received, processed (including enclosed processing systems), packed (bottled items), stored, or served, application is limited to cracks and crevices and spot treatment only. All food or food should be removed or covered before treatment. Apply sparingly into cracks and crevices using equipment designed to place powder in specific locations. Test open spaces below floors, ceilings, walls, under sinks, underneath and behind equipment, appliances, around pipes, under sinks, in utility closets, around garbage cans, etc.

No individual spot will exceed two (2) square feet. Limit spot treatments to wall or floor surfaces where pests have been seen or where pests are suspected of hiding.

NON-FOOD: FEED AREA: Use stack and crawls and spot treatments as described above. Also apply to any interior spaces where pests hide, run, or wander such as attics and spaces above suspended ceilings, cornices, under sinks, storage rooms, basements, and crawl spaces, cracks in basements, moldings and doorframes, corners in closets, cracks in and around doors, windows, furniture, and appliances, etc. Worns into and apply under carpets, rugs, mattresses, couch cushions, furniture. Wash boxes and pans and fill dust to dust bedding and surrounding areas. Apply to mattresses and bed frames to kill bed bugs and certain other insects, such as cockroaches and ants, and along foundations where dust will remain dry.
