The Scotts Advantage

Kills moss quickly and builds thick, green lawns
- Each moss plant in your lawn will get thoroughly coated to assure complete, effective control. The moss will turn black and eventually disappear. This product controls existing moss.
- Every Turf Builder with Moss Control particle delivers all of the feeding nutrients and moss control to every square inch of turf for even, consistent feeding plus better moss control than ordinary mixed moss control granules.
- To prevent moss from becoming established during winter or spring, apply Turf Builder with Halts in the fall (August-December), after temperatures have cooled and fall rains have begun (except in California).

Scotts All-in-One Particles® deliver even feeding and control.

Turf Builder® With Moss Control

*All-in-one particles = nitrogen, phosphorus, potassium and the weed control ingredient contained in every particle

Choose the Right Product for the Situation

If you only have small areas of moss in your lawn, your lawn still needs a spring feeding. Apply Scotts® Turf Builder® Lawn Fertilizer and then spot treat with either Scotts® Moss Control Granules or Ortho® Moss-B Gon.

For a thick, green lawn follow Scotts Annual Lawn Care Program.
- Start the program at any time
- Allow 2 months between applications

Take The Guesswork Out Of Lawn Care

KEY PRODUCT FACTS

How and When to Apply
Directions for Use
- 8 oz. = 5 - 10 lbs. of Turf Builder with Moss Control
- It is best to apply when the lawn ismoist and soil is dry to improve low-growing grass. Use the NEAREST RATE (ounces 3,000 sq. ft. for normal moss infections, ounces 4,000 sq. ft. for heavy moss infections).
- Do not apply to a newly seeded or sodded lawn until it has been mowed one time.
- Avoid or move seeds, killed concrete, slabs, clothing, or shoes is present in the area.
- Grass blades may show a temporarily black color, however, this condition will disappear after raining.

Spreading Tips
- Apply at the rate and in the way directed on the label. Two or more applications a year are usually necessary for moss control.

Spreader Settings
For best results, use a Scotts spreader.

Additional Spreader Settings
- U.F., Paper Plus, F.D. (in dry season), 6% (in dry season)
- Lime, Morton Micron, 4% (in dry season)
- Sulfur, Burford, 4% (in dry season)
- (Non-stick spray) spray to spreader bag before use.

KEEP OUT OF REACH OF CHILDREN

CAUTION: Harmful if swallowed, inhaled or absorbed through skin. Causes moderate eye irritation. Avoid contact with skin, eyes or clothing. Avoid breathing dust. Wash thoroughly with soap and water after handling. Do not allow children to touch or play near treated areas.

Application Instructions
- Use the spreader according to the instructions on the label.
- Wet end of spreader to ensure proper delivery and even distribution.
- To avoid getting the spreader wet, cover the spreader with a plastic bag before and after use.

Pest Control
- For best control, apply in the summer months when weeds are most susceptible.
- For best control, apply 3-4 times a year. The first application should be made in the spring, followed by applications in June, July, and August.
- For best control, apply in the fall (August-December), after temperatures have cooled and fall rains have begun (except in California).
