SANICARE TBX is designed specifically as a general non-acid cleaner and disinfectant for use in hospitals, nursing homes, schools, food service establishments, transportation terminals, office buildings, manufacturing facilities, public buildings, hospitals, clinics, nursing homes, and other areas where householding is of prime importance in controlling the hazard of cross contamination. It is formulated to disinfect, kill or reduce on-porous non-inanimate environmental surfaces, floors, metal, stainless steel surfaces, glazed porcelain, glazed ceramic tile, plastic surfaces, bathrooms, shower stalls, bathtubs, and cabinets. For plastic or painted surfaces, spot test on an inconspicuous area before use. In addition, it can be used on many different areas which are prone to bacterial and microbial contamination caused bychselon infections.

Animal Housing Facilities and Poultry and Swine Premises: SANICARE TBX removes dirt, grime, mold, mildew, blood, urine, fecal matter and common other odors found in animal housing facilities, kennels, pet stores, veterinary clinics, laboratories or other small animal facilities. It eliminates odors leaving surfaces smelling clean and fresh. It cleans, decontaminates and deodorizes hard, non-porous inanimate surfaces in one step. Use daily to clean and decontaminate hard, non-porous inanimate surfaces: termined surfaces associated with floors, walls, cages, cabinets, and equipment found in animal housing facilities. When handling items soiled with blood or body fluids use disposable latex gloves.
