WARRANTY STATEMENT: Seller warrants that this product conforms to the ingredient statement on the label. Since conditions of use, such as weather, compatibility with other chemicals, and conditions of application equipment will vary, seller makes no claim other than those stated on the label.

DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. Do not apply this product through any type of irrigation system.

DRY APPLICATION RATES: The goal is to get coverage over the entire plant, especially under the leaves. For young plants, as little as two pounds per acre may be sufficient. For larger plants, five pounds may be necessary. With denser growth, it may be necessary to increase amount. An examination of the leaves will tell if the leaf bottom is covered. For yards and gardens, apply to get light, thorough coverage.

APPLICATION EQUIPMENT: A good dust applicator is essential, and should be equipped with electronic nozzles, which put a negative charge on the dust. The plant being positive attracts the dust resulting in better coverage even on leaf bottom. A hand-held duster or a plastic squeeze bottle container with a fine nozzle works well for yards and gardens.

WET APPLICATION RATES: The same rates apply when using PERMA GUARD GARDEN AND PLANT PROTECTION INSECTICIDE AS A WETTABLE POWDER. Adding water is merely a means of using existing spray equipment.

MIXING INSTRUCTIONS:

MINIMUM: 1 lb to 2 gal water.
MAXIMUM: 1 lb to 25 gal water.

The purpose is to get a solution that will flow easily through the nozzle, and still put the recommended amount of product. It is essential to get coverage on the underside of the leaf.

GREENHOUSE, YARD AND GARDEN PLANTS: The same application instructions apply. Get coverage on top and bottom of leaf. Apply either wet or dry.

APPLICATION EQUIPMENT: A variety of equipment is available, from small hand units, backpacks, and tractor equipment, or some capable of applying either wet or dry.
