STORAGE AND DISPOSAL

PESTICIDE STORAGE

Do not contaminate water, food by feed or storage, disposal or cleaning of equipment. Do not apply this product in a way that will contact workers or other persons. Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide or insecticide is a violation of federal law. If these materials are applied to the water, food by feed or storage, disposal, or cleaning of equipment, call a state (or local) official to: 1) Ensure that this product has been disposed of in the water, feed, or storage; and 2) Ensure that this product has been disposed of properly; and then 3) Ensure that proper disposal of this pesticide has been completed. For the proper disposal of this pesticide, see DISPOSAL OF WASTES.

CORROSIVE

HAZARDOUS TO HUMANS AND DOMESTIC ANIMALS

POTENTIAL HAZARDS TO HUMANS AND DOMESTIC ANIMALS

HARMFUL IF SWALLOWED OR ABSORBED THROUGH THE SKIN

HARMFUL IF INHALED

CORROSIVE

PESTICIDE STORAGE

STORAGE AND DISPOSAL

IN CASE OF AN EMERGENCY ENDANGERING LIFE OR PROPERTY INVOLVING THIS Product:

FIRST AID

PERSONAL PROTECTIVE EQUIPMENT

1. Keep the product container or label with you when calling a poison control center or doctor, or read the label if possible.

2. Remove clothing immediately and wash in soapy water if clothing is contaminated with this product.

3. If spilled on skin, wash with soap and water for at least 20 min. then continue to wash thoroughly.

4. For the control of microbial biofilms, bacteria, algae, and fungi, add this product to industrial recirculating water cooling systems or some part of the system to induce uniform mixing. For the control of microbial biofilms, bacteria, algae, and fungi, add this product to the Beater, recirculating water cooling towers at some point in the system to ensure uniform mixing.

PRIMARY ACTIVITY INGREDIENTS

Application Example:

- For the control of microbial biofilms, bacteria, algae, and fungi, add this product to process water systems at some point in the system to ensure uniform mixing.
- For the control of microbial biofilms, bacteria, algae, and fungi, add this product to brewery pasteurizers.
- For the control of microbial biofilms, bacteria, algae, and fungi, add this product to potable water or dialysis is prohibited. Add 10-333 ppm of product (0.15-5 ppm active ingredient) to the cleaning solution.
- For the control of microbial biofilms, bacteria, algae, and fungi, add this product to hospital or medical life support systems and non-medical non-life support systems. For the control of microbial biofilms, bacteria, algae, and fungi, add this product to hospital or medical life support systems and non-medical non-life support systems.
For the control of microbial biofilms, bacteria, algae, and fungi, add this product to air conditioning/refrigeration condensate water systems at some point in the system to insure uniform mixing.

INITIAL DOSE: When the system is noticeably fouled, apply 148-883 ppm product (2.2-13.2 ppm active ingredient). Repeat until control is achieved. Badly fouled systems should be cleaned before treatment is begun.

SUBSEQUENT DOSE: When microbial control is evident, add 35-219 ppm product (0.5 to 3.3 ppm active ingredient) weekly or as needed to maintain control.

For the control of microbial biofilms, bacteria, algae, and fungi, add this product to hydrostatic sterilizer water systems at some point in the system to insure uniform mixing.

INITIAL DOSE: When the system is noticeably fouled, apply 148-883 ppm product (2.2-13.2 ppm active ingredient). Repeat until control is achieved. Badly fouled systems should be cleaned before treatment is begun.

SUBSEQUENT DOSE: When microbial control is evident, add 35-219 ppm product (0.5 to 3.3 ppm active ingredient) weekly or as needed to maintain control.

This product is recommended for the control of microbial biofilms, bacteria, fungi, and algae in industrial wastewater treatment and sewage systems. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority.

INITIAL DOSE: When the system is noticeably fouled, apply 148-883 ppm product (2.2-13.2 ppm active ingredient). Repeat until control is achieved. Badly fouled systems should be cleaned before treatment is begun.

SUBSEQUENT DOSE: When microbial control is evident, add 35-219 ppm product (0.5 to 3.3 ppm active ingredient) weekly or as needed to maintain control.

For the control of microbial biofilms, bacteria, algae, and fungi, add this product to influent water filtration systems at some point in the system to insure uniform mixing.

INITIAL DOSE: When the system is noticeably fouled, apply 148-883 ppm product (2.2-13.2 ppm active ingredient). Repeat until control is achieved. Badly fouled systems should be cleaned before treatment is begun.

SUBSEQUENT DOSE: When microbial control is evident, add 35-219 ppm product (0.5 to 3.3 ppm active ingredient) weekly or as needed to maintain control.

For the control of microbial biofilms, bacteria, algae, and fungi, add this product to can warmers at some point in the system to insure uniform mixing.

INITIAL DOSE: When the system is noticeably fouled, apply 148-883 ppm product (2.2-13.2 ppm active ingredient). Repeat until control is achieved. Badly fouled systems should be cleaned before treatment is begun.

SUBSEQUENT DOSE: When microbial control is evident, add 35-219 ppm product (0.5 to 3.3 ppm active ingredient) weekly or as needed to maintain control.

For the control of microbial biofilms, bacteria, algae, and fungi, add this product to retort water systems at some point in the system to insure uniform mixing.

INITIAL DOSE: When the system is noticeably fouled, apply 148-883 ppm product (2.2-13.2 ppm active ingredient). Repeat until control is achieved. Badly fouled systems should be cleaned before treatment is begun.

SUBSEQUENT DOSE: When microbial control is evident, add 35-219 ppm product (0.5 to 3.3 ppm active ingredient) weekly or as needed to maintain control.

For the control of microbial biofilms, bacteria, algae, and fungi, add this product to evaporative condenser water systems at some point in the system to insure uniform mixing.

INITIAL DOSE: When the system is noticeably fouled, apply 148-883 ppm product (2.2-13.2 ppm active ingredient). Repeat until control is achieved. Badly fouled systems should be cleaned before treatment is begun.

SUBSEQUENT DOSE: When microbial control is evident, add 35-219 ppm product (0.5 to 3.3 ppm active ingredient) weekly or as needed to maintain control.
