MICRON CSC®
DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

PRODUCT DESCRIPTION: MICRON CSC® is the newest in a series of multi-layer anticorrosion paints based on Controlled Solubility Copolymers™ technology. These products are designed to wear away (etch) at a controlled rate similar to that of soap. As a result, there will be a reduced buildup of film and minimal sanding at repainting. In addition, this technology allows the boat to be hauled and relaunched the following season without repainting. MICRON CSC® contains high solids and thins to light colors. It will provide excellent adhesion and blocking against all types of algae, weeds, barnacles, and other similar fouling. MICRON CSC® can be used below the waterline in fresh, salt or brackish water on fiberglass, wood and properly painted metal hull and parts. Do not use on aluminum.

COMPATIBILITY: MICRON CSC® can be applied over most hard conventional anti-fouling paints as long as the old coating is lightly sanded and in sound condition. MICRON CSC® should not be applied over MICRON® 33, MICRON®-41 or soft anticorrosion paints. These old coatings should be removed. MICRON CSC® is compatible with conventional bottom paints after they have been thoroughly sandblasted with 80 grit wet or dry sandpaper.

VGS: Less than 400 gals/lb (3.3 lb/gal) as supplied

THINNER: Brushing - Brush-Ease 433™
Spraying - Special Thinner 216™

THINNING: This only when necessary. Do not exceed 10% by volume.

CLEAN-UP: Special Thinner 216™ or Brush-Ease 433™

THEORETICAL COVERAGE: 440 square feet per gallon/coat will yield 2-3 dry mil thickness.

DRY TIMES: Touch dry - 2 hours

APPLICATION TEMPERATURE: 50°F (10°C) and above. (Air and hull).

* If either the air or hull temperature falls below 50°F (10°C) during the 16 hour dry time extend the dry time to a minimum of 36 hours.

APPLICATION SYSTEMS

GENERAL APPLICATION PROCEDURES: Shake or mix well prior to use. Apply at least 2 full coats (2 coats on bare wood) to MICRON CSC® by brush or solvent resistant 2-3M™ green (“C” handle) plastic sprayer. Only apply one thin coat. Keep in mind that the life of the paint is directly related to the amount of paint applied. If the bottom is being repainted, brush pull-up or roller application is used. Interlux® Brush-Ease 433™ to improve covering. Certain areas of hull experience faster polishing than other areas. These areas include the transom, the leading edge of the bow and forward of the transom. If the bottom is being repainted, brush pull-up or roller application is used. Interlux® Brush-Ease 433™ to improve covering. Certain areas of hull experience faster polishing than other areas. These areas include the transom, the leading edge of the bow and forward of the transom.

PREVIOUSLY PAINTED SURFACES - GOOD CONDITION: Remove all traces of old paint and contamination by sandblasting or scraping. Sand to a bare, smooth surface with 80 grit wet or dry sandpaper. Ensure surface is clean with Interlux® Special Thinner 216™. Apply at least 2 coats of MICRON CSC®, allowing proper dry times.

PREVIOUSLY PAINTED SURFACES - POOR CONDITION: Completely remove all old anti-fouling paint with Interlux® 216™ roughing-up. Before liquid coats, wipe clean with a dry cloth. (Be sure all wax and other contaminants are removed). Failure to properly clean the surface will result in paint delamination. Sand any imperfections and repair with Interlux® Watertite YAW-133 sand and wipe clean. Apply two coats of Interlux® Watertite No Sand Flat Primer H20™ with brush or roller. Do not spray. Do not sand. Allow to cure 2 hours but no more than 3 hours. Apply first coat of MICRON CSC® and dry to dry overnight. Apply at least one more coat of MICRON CSC® allowing proper dry times.

BARE FIBERGLASS - NO SAND SYSTEM: Wash entire surface thoroughly with Interlux® Fiberglass Solvent Wash 202™ twice with fresh water. Fill blowers with Interlux® Solvent Wash 202™. Apply at least 2 coats of MICRON CSC® allowing proper dry times.

BARE WOOD: Sand entire surface thoroughly with 80 grit dry or wet sandpaper. Wipe dust clean with Interlux® Brush-Ease 433™. Apply six (6) coats of MICRON CSC® with Interlux® Brush-Ease 433™. Do not Sand between coats. Apply six (6) coats of MICRON CSC® with Interlux® Brush-Ease 433™. Do not Sand between coats. Apply first coat of MICRON CSC® and then let dry to dry overnight. Apply at least one more coat of MICRON CSC® and then let dry to dry overnight. Sand any imperfections and repair with Interlux® Watertite YAW-133 sand and wipe clean. Sand entire gelcoat well with 30 grit wet or dry sandpaper. Before liquid coats, wipe clean with a dry cloth. (Be sure all wax and other contaminants are removed). Failure to properly clean the surface will result in paint delamination. Sand any imperfections and repair with Interlux® Watertite YAW-133 sand and wipe clean. Sand entire gelcoat well with 30 grit wet or dry sandpaper. Before liquid coats, wipe clean with a dry cloth. (Be sure all wax and other contaminants are removed). Failure to properly clean the surface will result in paint delamination.

STORAGE & DISPOSAL: Do not contaminate water, food, feed by storage or disposal.

STORAGE DISPOSAL: Pesticide, barium mixture or reagents that cannot be used according to label instructions must be disposed of according to applicable Federal, State, or local procedures.

CONTAINER DISPOSAL: Triple rinse (or equivalent) before offering for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by other procedures approved by state and local authorities.
