**FIRST AID**

**IF SWALLOWED:** Immediately call a poison center or doctor. Do not induce vomiting unless told to do so by the poison center or doctor. Do not give any liquid to the person. Do not give any food to the person.

**IF IN EYES:** Hold eyes open and rinse slowly and gently with water for 15 - 20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eyes. Call a poison center or doctor for further advice.

**IF ON SKIN OR CLOTHING:** Take off contaminated clothing. Rinse skin immediately with plenty of water for 15 - 20 minutes. Call a poison center or doctor for further advice.

**NOTE TO PHYSICIAN:** Contains pyrethrin that may cause respiratory symptoms. In case of contact with skin or clothing, wash with soap and water. Remove and wash contaminated clothing before reuse.

**PRECAUTIONARY STATEMENTS**

**HAZARDS TO HUMANS AND DOMESTIC ANIMALS**

**CAUTION**

Nutmull absorbed through skin. Causes moderate eye irritation. Avoid contact with skin, eyes, or clothing. Wash with soap and water after handling and before eating, drinking, chewing gum, or using tobacco. Remove and wash contaminated clothing before reuse.

**ENVIRONMENTAL HAZARDS**

This product is toxic to fish and aquatic invertebrates. Do not apply directly to water or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water by cleaning equipment or disposing of equipment wash water. Observe the most restrictive of existing fish and wildlife protection regulations and precautions of all products used in mixture.

**PHYSICAL OR CHEMICAL HAZARDS**

Combustible. Do not use near heat or open flame. Do not use this product or any electrical equipment that is capable of generating sparks.

**STORAGE AND DISPOSAL**

Do not contribute water, food, or feed by storage or disposal.

**PESTICIDE STORAGE:** Store in a cool dry area under lock and key. Peel as a pesticide storage area.

Always store pesticides in the original container. Store away from food, soaps, cleaners, and cigarette tobacco.

**PESTICIDE DISPOSAL:** Use approved disposal methods to dispose of this product and all its containers (except the container itself). Dispose of the remaining container into approved equipment or a rinsate tank and drainage for 10 seconds after the rinse begins to stop. Fill the container with water and recap. Shaker for 10 seconds. Pour rinse into approved equipment or a rinsate tank and drain for 10 seconds after the rinse begins to stop. Fill the container with water and recap. Shaker for 10 seconds. Pour rinse into approved equipment or a rinsate tank and drain for 10 seconds after the rinse begins to stop. Repeat the procedure two more times. Then store for recycling if available, or puncture and dispose of in a sanitary landfill or by incineration. Do not burn unless allowed by state and local ordinances.

INDOOR FLEA CONTROL
PRE-TREATMENT: Carpets, draperies and upholstered furniture should be vacuumed thoroughly and the vacuum cleaner bag disposed of in an outdoor trash receptacle. Remove pets from area to be treated. After treatment, do not allow children and pets into treated areas until spray has dried.

INSTRUCTIONS FOR USE: This concentrate is mixed with water and applied with spray equipment such as any low pressure sprayer typically used for indoor application.

SPRAY PREPARATION: Prepare a diluted spray solution by adding 1 fl oz of this concentrate per gallon of water. Partially fill the mixing container with water, add concentrate, agitate and fill to final volume. Mix before each use.

IN CONJUNCTION WITH AN ADULTICIDE INSECTICIDE: This concentrate can be mixed with other pesticides registered for adult control of fleas in accordance with the most restrictive of label limitations and precautions. No label dosage rates may be exceeded. This product cannot be mixed with any product containing a label prohibition against such mixing. The combination would provide immediate control of adult fleas and inhibit the development of the immature stages of the flea for 7 months. Use this product at application rates specified above.

GENERAL SURFACE APPLICATION: Apply product diluted spray solution at the rate of 1 gal/1,500 sq ft of surface area. Treat all areas that may harbor fleas, including carpets, furniture, pet sleeping areas and throw rugs. Treat under cushions of upholstered furniture. Do not allow children or pets to contact treated surfaces until spray has dried.

IN CONJUNCTION WITH CARPET SHAMPOO: This concentrate may be combined with a liquid, non-heat extracting carpet shampoo application. Following dilution instructions on carpet shampoo, add 1 fl oz of concentrate per gallon of diluted shampoo to be applied to carpet. Mix well and shampoo carpet as per instructions on the shampoo product label using approximately 1 gal of diluted shampoo to treat 1,500 sq ft. Allow carpet to completely dry and vacuum thoroughly.

OUTDOOR FLEA CONTROL
PRE-TREATMENT: Treat these areas which will stop the development of pre-adult fleas from becoming biting and reproductive adult fleas. Using an adjustable hose-end sprayer, tank type sprayer or sprinkling can, prepare a diluted spray solution by adding 1 fl oz/gal of water. Partially fill the sprayer with water, add required amount of concentrate in sprayer, agitate and fill to final volume. Agitate before each spray.

Apply at a rate of 1 gal diluted solution per 1,500 sq ft of surface area. Apply to resting areas, walls, floor, animal bedding and run areas. Remove animals before spraying and do not return animals to treated areas until spray has dried completely. Pets and their bedding should also be treated with EPA registered flea and tick control products, such as flea or flea and tick collar, pet powder, pet spray, pet dip, pet shampoo, flea shampoos or flea and tick pet shampoos, in conjunction with this application as part of a complete flea control program to prevent the introduction of adult fleas.

IN KENNELS AND DOGHOUSES: Treatment of these areas will stop the development of pre-adult fleas from becoming biting and reproductive adult fleas. Using an adjustable hose-end sprayer, tank type sprayer or sprinkling can, prepare a diluted spray solution by adding 1 fl oz/gal of water. Partially fill the sprayer with water, add required amount of concentrate in sprayer, agitate and fill to final volume. Agitate before each spray.
This product may be used to prepare a diluted spray solution by adding 2 fl oz of this concentrate per gallon of water. Partially fill the mixing container with water, add concentrate, agitate and fill to the final volume. Agitate before each spray. FOR FOGGING APPLICATION: To prepare the fogging solution, mix 1 fl oz of this concentrate with 1 fl oz of petroleum distillate or 1 fl oz of water and agitate to assure a uniform mixture. The resulting 2 fl oz of solution will then be used to fog 1,900 ft² of space.

IN CONJUNCTION WITH AN ADULTICIDE INSECTICIDE: This product can be mixed with other pesticides registered for adult control of cockroaches in accordance with the most restrictive of label limitations and precautions. No label dosage rates may be exceeded. This product cannot be mixed with any product containing a label prohibition against such mixing. The combination would provide immediate control of adult cockroaches and inhibit the development of the immature stages of the cockroach eggs for 180 days. Use product at application rates specified above.

GENERAL SURFACE APPLICATIONS – COCKROACHES, Brown Banded Cockroach, Asian Cockroach, German Cockroach, and Cricket: Apply diluted spray at the rate of 1 gal/1,000 ft² of surface area as a spot treatment, surface application and Crack & Crevice spray. Contact as many insects as possible with this spray in addition to thorough spraying of all parts of the room suspected of harboring these pests. Special attention should be paid to hiding places such as beneath sinks, behind and beneath stoves and refrigerators, cracks and crevices, around garbage cans, cabinets, along the outside of baseboards, door and window sills, door and window frames and floors, around and on drains, pipes, plumbing, behind books, storage and other utility installations, infested furniture and the inside of cabinets and closets hitting insects with spray whenever possible. FOR OUTDOOR PERIMETER TREATMENTS FOR COCKROACHES AND CRICKETS: Prepare a diluted spray solution by adding 2 fl oz of this concentrate per gallon of water into any low-pressure sprayer. At the rate of 1 gal/7,000 ft², apply in a band 3 - 4 ft adjacent to and around the structure and apply to a height of 2 - 3 ft on the foundation where pests may be active or may find entrance. Apply as a surface spray around window frames, doors, garage-doors, patios, decks, carports, and shutters, around garbage areas, sill plates and other areas where cockroaches may congregate. Do not apply as a space spray. Do not apply under windy conditions. Do not apply this product in or around bodies of water.

NONFOOD WAREHOUSES: This product may be applied as a general surface, fogger, spot or Crack & Crevice treatment in nonfood storage warehouses. Apply to all areas that may harbor pests, including under and between pallets. Repeat application in 90 days.

TREATMENTS IN FOOD HANDLING ESTABLISHMENTS: (Places other than private residences in which food is held, processed, prepared or served.)

NONFOOD AREAS: This product may be used to treat nonfood areas. Nonfood areas include areas such as garage rooms, laundries, floor drains (to sewers), entries and vestibules, offices, locker rooms, machine rooms, boiler rooms, garages, mop closets and storage (after cleaning or bottling). Do not use in food/feed areas of food/feed handling establishments, restaurants or other areas where food/feed is commercially prepared or processed.

FOR INDOOR COCKROACH AND CRICKET CONTROL:

INSTRUCTIONS FOR USE: This concentrate is mixed with water and applied with spray equipment such as a low pressure sprayer typically used for indoor applications.

SPRAY PREPARATION: Prepare a diluted spray solution by adding 2 fl oz of this concentrate per gallon of water. Partially fill the mixing container with water, add concentrate, agitate and fill to the final volume. Agitate before each spray.

DILUTION FOR FOGGING APPLICATION: To prepare the fogging solution, mix 1 fl oz of this concentrate with 1 fl oz of petroleum distillate or 1 fl oz of water and agitate to assure a uniform mixture. The resulting 2 fl oz of solution will then be used to fog 1,900 ft² of space.

IN CONJUNCTION WITH AN ADULTICIDE INSECTICIDE: This product can be mixed with other pesticides registered for adult control of cockroaches in accordance with the most restrictive of label limitations and precautions. No label dosage rates may be exceeded. This product cannot be mixed with any product containing a label prohibition against such mixing. The combination would provide immediate control of adult cockroaches and inhibit the development of the immature stages of the cockroach eggs for 180 days. Use product at application rates specified above.

GENERAL SURFACE APPLICATIONS – COCKROACHES: Brown Banded Cockroach, Asian Cockroach, German Cockroach, and Cricket: Apply diluted spray at the rate of 1 gal/1,000 ft² of surface area as a spot treatment, surface application and Crack & Crevice spray. Contact as many insects as possible with this spray in addition to thorough spraying of all parts of the room suspected of harboring these pests. Special attention should be paid to hiding places such as beneath sinks, behind and beneath stoves and refrigerators, cracks and crevices, around garbage cans, cabinets, along the outside of baseboards, door and window sills, door and window frames and floors, around and on drains, pipes, plumbing, behind books, storage and other utility installations, infested furniture and the inside of cabinets and closets hitting insects with spray whenever possible.
SPPRAY PREPARATION FOR SURFACE, SPOT, AND CRACK & CREVICE APPLICATIONS: Prepare a diluted spray solution by adding 1.5 fl oz of this concentrate per gallon of water. Partially fill the mixing container with water, add concentrate, agitate and fill to final volume. Agitate before each spray application.

TANK MIXING: This product can be mixed with other pesticides in accordance with the most restrictive of label limitations and precautions. No label dosage rates may be exceeded. This product cannot be mixed with any product containing a label prohibition against such mixing. NOTE: See chart on next page.

GENERAL SURFACE APPLICATIONS: Apply diluted spray at a rate of 1 gal/1,000 ft². Apply with a sprayer that will give coarse, wet droplets. Spray surfaces, into cracks and crevices in walls and floors, under and between palettes, areas at the base of machinery and equipment, under furniture, in mop and equipment closets, behind cabinets, under shelves and racks, around pipes and openings in floors and walls, along baseboards, in wall voids, and other areas where insects seek harborage. Contact as many insects as possible. Repeat application in 90 days.

SPOT AND CRACK AND CREVICE APPLICATIONS: Apply diluted spray solutions using a pressurized spray system capable of delivering a pinpoint or variable spray pattern. Crack & Crevice applications may be made directly to areas such as crevices, boardboards, floors, ceilings, walls, expansion joints, molding, areas around water and sewer pipes, voids where pests can hide and similar areas. Spot treatments may also be made to areas including storage areas, closets, around water pipes, doors and windows, behind and under refrigerators, cabinets, sinks, stoves and other equipment, shelves, drawers and similar areas.

FOGGING APPLICATIONS: This product may be applied as a fog or ultra-low volume (ULV) application with equipment such as ULV equipment, mechanical misting sprayers, aerosol generators, or thermal foggers. To prepare the fogging solution, follow the equipment manufacturer’s solution preparation instructions. For fogging applications, this concentrate may be diluted with water or petroleum distillate. Apply at a rate of 1.5 fl oz of this concentrate diluted in appropriate carrier per 12,000 ft³. Fogging applications are recommended for larger facilities including food and nonfood warehouses. Close area to be treated and shut off all ventilation systems. Apply the product in the air and direct fog or mist toward all areas that may harbor target pests. After treatment, leave the room closed for 30 minutes or longer as recommended by the equipment manufacturer or the labels of other products applied in tank mixing. Do not remain in treated area. Ventilate thoroughly before reentry.

FOR CONTROL OF LITTER BEETLES (Such as Darkling, Hide and Carrion Beetles) This product can be applied to litter, such as in poultry houses infested with litter beetles, to break the lifecycle of these insect pests. Make uniform application of this product to litter at the rate of 1 fl oz of concentrate per 1,000 ft² of space in sufficient volume of water to achieve thorough coverage. For effective prevention of beetle larvae in litter, remove animals from immediate treatment area and old litter. Surface treat immediately after animals are removed and again just prior to new animal placement is most effective. Adult egg-laying beetles can be killed with fast-acting adulticides. Application of adulticides to walls and floors at cleanout, before reintroduction of animals, will suppress beetles that escaped earlier treatment and will help delay onset of future infestations. Pay attention to areas where beetles frequently occur, such as stalls, supports, cages, stalls and around feeders. Cover or remove exposed food, feed, water and watering equipment. Apply uniformly at the rate of 1 fl oz of concentrate per 1,000 ft² to floor area and to walls, pots, and cage framing (birds grown in cages only). Application should also be made into cracks and crevices around insulation. Reapply after each grow out or sanitation procedure. Indoor control can be enhanced by making perimeter treatment around the outside of buildings to prevent immigrating adult beetles. Apply this product or adulticide insecticides, or both, in a uniform band at least 1 ft up and 1 - 4 ft out from foundation. Maintaining a year-round treatment program will prevent background populations from reaching problem levels.

NOTE: See chart on next page.

-Booklet applied to front of bottle on top of base label
FOR CONTROL OF ANTS
Apply this product at the rate of 2 fl oz diluted in 1 gal of water per 1,000 ft² to interior areas
where ants are actively foraging and in a band 6 - 10 ft wide adjacent to the exterior foundation
wall of the building. This product may be used alone, with alternating treatments of an adulticide
insecticide, or in a tank mix combination with an adulticide insecticide.
If needed, repeat treatments with this concentrate may be made 14 days after previous
treatment or if heavy rainfall occurs repeat application.
NOTE: See chart on next page.

FOR CONTROL OF FLYING INSECT PESTS
Such as Flies, Moths, Midges, Mosquitoes & Gnats
GENERAL SURFACE TREATMENTS: For control of Houseflies, Stable Flies, Moths, Mosquitoes, Nuisance Flies (Gnats, Midges) and other similar flying pest insects such as those classified as Dipterus or Hymenopterus. This product effects both adult and juvenile stages. In Houseflies, this product causes a decrease in the number and hatching of eggs laid by treated adults. Fly larvae (maggots) show physiological and functional defects leading to the inability to develop into normal adults. When used alone, this insect growth regulator will result in a reduction in adult fly populations after 3 - 4 weeks when previously hatched adult flies have died naturally.
This product may be used for control of flying insect pests in those areas in, on and around residential, commercial, public, industrial and agricultural buildings. For the purposes of controlling general and occasional insect pests, this product may be used to control nuisance flies, gnats, midges, and mosquitoes by application into moist breeding areas (potted plants, moist debris or litter) or into areas holding standing water such as gutters, drains, pools and fountains.
• Do not apply directly to any natural bodies of water such as ponds, lakes, streams, rivers, marshes, potholes and estuaries.
• If needed, repeat treatments may be made 14 days after previous treatment or, if heavy rainfall occurs, repeat application.
TREATMENTS IN COMBINATION WITH AN ADULTICIDE: For knockdown and more rapid
control of adult flying insect pests or to control an influx of flies from untreated areas, use this
product in alternation or in a tank mix combina-
tion with an adulticide insecticide. The combina-
tion would provide for immediate control of adult
flying insects such as flies on resting surfaces
such as walls and overhead areas while pre-
venting immature insect stages from developing
into adults.

-100%
-Pages 17-20
-Each page measure 2.875" (w) x 4.25" (h)
-Booklet applied to front of bottle on top of base label
**TANK MIXING:** This concentrate can be mixed with other pesticides in accordance with the most restrictive of label limitations and precautions. No label dosage rates may be exceeded. This product cannot be mixed with any product containing a label prohibition against such mixing. Prepare the tank mix using the recommended label rate of adulticide and this product by adding the adulticide first and making sure it is well mixed and in suspension and then adding the correct amount of this concentrate according to the label instructions below.

**NOTE:** See chart on next page.

---

**TREATMENTS IN, ON AND AROUND LIVESTOCK AND POULTRY HOUSING AND PET KENNELS**

This product may be used by pest control operators or livestock producers in livestock housing structures (including poultry houses) and pet kennels to control flying insects. Remove pets from kennels before treatment. Apply as a general surface, fogger/ULV or a crack and crevice application to areas where flying pests collect or breed. For surface applications, thoroughly wet floors, walls, ceilings, and doors, around windows, garbage and refuse areas. When used as directed, control will be enhanced when facilities are cleaned and interior applications are supplemented with exterior perimeter treatments.

- Treat birdcages or stock pens only after removal of animals.
- Do not make interior applications of this product in areas of facility where animals are present.
- Allow treated areas to dry before allowing animals back in treated areas of facility.
- Cover or remove exposed food, feed, water and watering equipment.

**TREATMENTS TO INTERIOR AREAS AND SURFACES:** Use 1 fl oz of concentrate per gallon of water and apply to 1,500 ft² of surface area or in sufficient volume to achieve adequate coverage. Treat all areas where flying insects may collect, rest or breed, including vertical walls, ceilings, pipes, conduits, stalls, stanchions, floors, and walkways. When this product is used alone, treatments can be extended to animal bedding, manure, and other potential areas where flying insects may breed.

**TREATMENTS TO PERIMETER AREAS AND SURFACES:** Use 1 fl oz of concentrate per gallon of water and apply to outside surfaces of buildings, porches, patios, garages and other areas where these pests have been seen or found. For perimeter control, make a general surface application of 1 fl oz of product diluted in water to cover 1,500 ft² or in sufficient volume to achieve adequate coverage. To help prevent infestations of buildings by flying insects, treat soil, vegetation or other substrates in a band 6 - 10 ft wide adjacent to the building foundations, walls, around doors and windows, and overhead areas where these pests are active and may find entrance or harborage.

---

**STORAGE AND DISPOSAL**

Do not contaminate water, food, or feed by storage or disposal.

**PESTICIDE STORAGE:** Store in a cool, dry area under lock and key. Post as a pesticide storage area. Always store pesticides in the original container. Store away from food, pet food, feed, seed, fertilizers, and veterinary supplies. Place liquid formulations on lower shelves and dry formulations above.

**PESTICIDE DISPOSAL:** To avoid wastes, use all materials in the containers by application according to label directions. If wastes cannot be avoided, offer remaining product to a waste disposal facility or pesticide disposal program (often such programs are run by state or local governments or by industry).

**CONTAINER HANDLING:** Nonrefillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling if available, or puncture and dispose of in a sanitary landfill or by incineration. Do not burn unless allowed by state and local ordinances.
