H-130 MICROBICIDE
TWIN CHAIN QUATERNARY AMMONIUM COMPOUND CONCENTRATE
WATER TREATMENT MICROBICIDE FOR COMMERCIAL AND INSTITUTIONAL BUILDINGS AND INDUSTRIAL AND COMMERCIAL COOLING TOWERS

ACTIVE INGREDIENTS
Didecyldimethyl ammonium chloride.................50%
INERT INGREDIENTS........................................50%
Total.............................................................100%

KEEP OUT OF REACH OF CHILDREN
DANGER

H-130 Microbiocide will control algae and bacterial slime found in recirculating cooling tower waters. Helps clean and loosen slime debris from cooling system surfaces. Is economical to use because it is concentrated. It must be handled with care.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

METHOD OF FEEDING

Feed H-130 Microbiocide directly from drums or pails by means of a proportioning pump or other food equipment to a system whose efficiency is impaired or in property of becoming affected. Apply H-130 Microbiocide throughout the system in the product that will be uniformly mixed and evenly distributed, such as the tower sump.

Recirculating Cooling Water Towers

FEED REQUIREMENTS

Badly fouled systems must be preclarified before treatment is begun. Best results are achieved when H-130 Microbiocide is fed intermittently.

Continuous Feed Method

Initial Dose: When the system is noticeably fouled, apply 6 fluid ounces of H-130 Microbiocide per thousand gallons of water (20 ppm active quat) in the system.

Subsequent Dose: Maintain treatment by starting a continuous feed of 2 to 3 fluid ounces of H-130 Microbiocide per thousand gallons of makeup water (~7-10 ppm active quat).

Intermittent Feed Method

Initial Dose: When the system is noticeably fouled, apply 6 fluid ounces of H-130 Microbiocide per thousand gallons of water (20 ppm active quat) in the system. If the dosage does not produce satisfactory results, increase dosage to 10 fluid ounces of H-130 Microbiocide per thousand gallons of water (30 ppm active quat). Typically, an antibiotic is required to maintain maximum (~50 ppm) dosages of H-130 Microbiocide are required to achieve biological control. After optimum treatment has been determined, repeat treatment weekly or increase frequency as required.

Subsequent Dose: When microbial control is evident, add 2 to 3 fluid ounces of H-130 Microbiocide per thousand gallons of water in the system weekly or as needed to maintain control (~7-10 ppm active quat).

Oil Field Water Flooded Salt Water Disposal Systems and Fracturing Fluids

For the control of slime forming and sulphate reducing bacteria in oilfield water flood or salt water disposal systems, add 5-10 ppm (active) of this product (1% - 3 gallons per 3,000 barrels of water) continually. Levels for effective control will vary depending on conditions at the site. For intermittent use, dose at a rate of 5-20 ppm (active) of this product (1% - 6 gallons per 3,000 barrels of water) for 4 to 8 hours per day, one to four times a week as needed to maintain control.

Oilfield Injection and Waste Water

This product must be added to the waste handling system at a point of uniform mixing such as the area of addition of make up water to the holding tank.

METHOD OF APPLICATION

Continuous Injection: Add this product at 30 ppm (9 fluid ounces per 1000 gallons of water) when system is noticeably fouled. When microbial control is evident, add this product at 5 ppm (4.5 fluid ounces per 1000 gallons of water) to maintain control.

Batch Treatment: Add this product at 180 ppm (46 fluid ounces per 1000 gallons of water) over a period of 4-6 hours. This is typically done as needed when system is noticeably fouled. When microbial control is evident, add this product at 90 ppm (23 fluid ounces per 1000 gallons of water) over a period of 4-6 hours one or more times per month.

Gas Storage Wells and Systems

Treat individual injection wells with this product to produce effective concentration of 65,000 ppm (active) of this product. Use treatment rate as needed. This product must be diluted by the water present in the formulation. Injection may be repeated yearly or as needed to maintain control.

Pipeline Pigging and Scraping Operations

Add this product to slugs of water immediately following the scraper (keep the water volume to a minimum and contained between the scraper and the pig). Add an effective concentration to produce 75-100 ppm depending on the length of the pipeline and the severity of the fouling.

Drilling, Completion and Workover Fluids Systems

Add to the fluid system at a point of uniform mixing such as circulating mud tank. Initial treatment: 65-1000 ppm (active) added to a freshly prepared fluid. Maintenance dosage: 5-600 ppm as to maintain control.

Packer Fluids

Add a packer fluid at a point of uniform mixing such as circulating mud tank at a rate of 65-1000 ppm (active for 100 barrels of fluid) to a freshly prepared fluid depending on the severity of contamination. Seal the fresh packer fluid in the well between the casing and the production tube.

Hydrotesting

Test water used to hydrotest pipelines or vessels at 65-1000 ppm active depending on the water quality and length of time the equipment will remain idle.

Thermal Processing and Pasteurization Operations

May be added to thermal processing water, pan count water or daily sweeter to control slime forming bacteria and deposition formation. Use 3-15 ppm active quat.

H-130 Microbiocide

Nalco Company

1631 West Dell Road

Naperville, IL 60563-1198

EMERGENCY PHONE NO.: (800) 424-9300
PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
DANGER: Corrosive. Causes irreversible eye damage and skin burns. Do not get in eyes, on skin, or on clothing. Wear protective eyewear, (goggles or face shield), protective clothing, and rubber gloves. May be fatal if swallowed or inhaled. Do not breathe vapor or spray mist. Wear a dust/mist filtering respirator (MSHA/NIOSH approval number prefix TC-21C), or a NIOSH approved respirator with any R, P, or H filter. Harmful if absorbed through the skin. Prolonged or repeated skin contact may cause allergic reactions in some individuals. Wash thoroughly with soap and water after handling and before eating, drinking or using tobacco. Remove contaminated clothing and wash before reuse.

ENVIRONMENTAL HAZARDS
This product is toxic to fish, aquatic invertebrates, and shrimp. Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans, or other waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the sewage treatment plant authority. For guidance contact your State Water Board or Regional Office of the EPA.

PESTICIDE STORAGE
DO NOT store near heat or open flame.
PESTICIDE DISPOSAL: Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture or rinsewater is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

CONTAINER HANDLING: Non-refillable container. Do not re-use or refill this container. Triple rinse (or enough water to fill a container) before discarding. Dispose of; Empty remaining contents into application equipment or a mix tank. Empty the container ¾ full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinse into application equipment or a mix tank, rinse, and store in a packer. Use rinsed container immediately. Do not store rinsate for later use or disposal. Repeat this procedure at both ends and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank, rinse, and store in a packer. Use rinsed container immediately.

CONTAINER HANDLING: Non-refillable container. Do not re-use or refill this container. Triple rinse (or enough water to fill a container) before discarding. Total.................................................................100%

KEEP OUT OF REACH OF CHILDREN
DANGER

H-130 Microbiocide will control algae and bacterial slime found in recirculating cooling tower waters. Helps clean and loosen slime debris from cooling system surfaces. Economical to use because it is concentrated. It must be handled with care.

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

METHOD OF FEEDING
Feed H -130 Microbiocide directly from drums or by means of a proportioning pump or other food equipment to a system whose efficiency is impaired or in jeopardy of becoming affected. Apply H-130 Microbiocide as needed to the system where the product will be uniformly mixed and evenly distributed, such as the tower sump.

Recirculating Cooling Water Towers

FEED REQUIREMENTS
Badly fouled systems must be pre-cleaning before treatment is begun. Best results are achieved when H-130 Microbiocide is fed continuously.

Continuous Feed Method
Initial Dose: When the system is noticeably fouled, apply 6 fluid ounces of H-130 Microbiocide per thousand gallons of water (20 ppm active quat) in the system.
Subsequent Dose: Maintain treatment by starting a continuous feed of 2 to 3 fluid ounces of H-130 Microbiocide per thousand gallons of make up water (~7-10 ppm active quat).

Intermittent Feed Method
Initial Dose: When the system is noticeably fouled, apply 6 fluid ounces of H-130 Microbiocide per thousand gallons of water (20 ppm active quat) in the system. If the dosages does not produce satisfactory results, increase dosage to 9 fluid ounces of H-130 Microbiocide per thousand gallons of water (30 ppm active quat). Typically, an antifoam is required to minimize foaming (~ 5-10 ppm) dosages of H-130 Microbiocide are required to achieve biological control. After optimum treatment has been determined, adjust treatment weekly or increase frequency as required.
Subsequent Dose: When microbial control is evident, add 2 to 3 fluid ounces of H-130 Microbiocide per thousand gallons of water in the system weekly or as needed to maintain control (~7-10 ppm active quat).

Oil Field Water Flood Or Salt Water Disposal Systems and Fracturing Fluids
For the controls of slime forming and sulfate reducing bacteria in oil field water flood or salt water disposal systems, add 5-10 ppm (active) of this product (1/10 - 3 gallons per 1,000,000 gallons of water) continuously. Levels for effective control vary depending on conditions at the site. For intermittent use, dose at a rate of 5-20 ppm (active) of this product (1/10 - 3 gallons per 1,000,000 gallons of water) (2-4 hours a day, one to four times a week) as needed to maintain control.

Oilfield Injection and Waste Water
This product must be added to the waste handling system at a point of uniform mixing such as the area of addition of make water to the holding tank.

METHOD OF APPLICATION
Continuous Injection: Add this product at 30 ppm (9 fluid ounces per 1000 gallons of water) when system is noticeably fouled. When microbial control is evident, add this product at 15 ppm (4.5 fluid ounces per 1000 gallons of water) to maintain control.
Batch Treatment: Add this product at 180 ppm (54 fluid ounces per 1000 gallons of water) over a period of 4-6 hours per day for 2 weeks. Add 4-6 hours of treatment per night if not reliably fed. When microbial control is evident, add this product at 90 ppm (27 fluid ounces per 1000 gallons of water) over a period of 4-6 hours one or more times per week.

Gas Storage Wells and Systems
Test individual injection wells with this product to produce effective concentration of 65-100 ppm (active) of this product. Use treatment as needed to control bacteria. This product must be diluted with the water present in the formation. Injection may be repeated yearly or as needed to maintain control.

Pipe Line Pigging and Scraping Operations
Add this product to slug of water immediately following the scraper (keep the water volume to a minimum and contained between the scraper and equipment). Add an effective concentration to produce 75-100 ppm depending on the length of the pipeline and the severity of the fouling.

Dredging, Completion and Workover Fluids Systems
Add to the fluid system at a point of uniform mixing such as circulating mud tank. Initial treatment: 65-100 ppm (active) added to a freshly prepared fluid. Maintenance dosage: 65-100 ppm as-us to as maintain control.

Packer Fluids
Add to a packer fluid at a rate of uniform mixing such as circulating holding tank a rate of 65-100 ppm (active per 100 barrels of fluid) to a freshly prepared fluid depending on the severity of the fouling. Seal the fresh packer fluid in the well between the casing and the production tube.

Hydrotesting
Treat water used to hydrotest pipelines or vessels at 65-100 ppm active depending on the water quality and length of time the equipment will remain idle.

Thermal Processing and Pasteurizer Operations
May be added to thermal processing water, pasteurization cooling water or dairy sweetwater to control slime forming bacteria and disinfection. Use 3-15 ppm active quat.

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
DANGER: Corrosive. Causes irreversible eye damage and skin burns. Do not get in eyes, on skin, or on clothing. Wear protective eyewear, (goggles or face shield), protective clothing, and rubber gloves. May be fatal if swallowed or inhaled. Do not breathe vapor or spray mist. Wear a dust/mist filtering respirator (MSA/NIOSH approval prefix TC-21C), or a NIOSH approved respirator with any N, R, P, or HE filter. Harmful if absorbed through the skin. Prolonged or repeated skin contact may cause allergic reactions in some individuals. Wash thoroughly with soap and water after handling and before eating, drinking or using tobacco. Remove contaminated clothing and wash before reuse.

ENVIRONMENTAL HAZARDS
This product is toxic to fish, aquatic invertebrates, oysters, and shrimp. Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans, or other waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the sewage treatment plant authority. For guidance contact your State Water Board or Regional Office of the EPA.

STORAGE AND DISPOSAL
Do not contaminate water, food, or feed by storage or disposal.

PESTICIDE STORAGE: Do not store near heat or open flame.

PESTICIDE DISPOSAL: Pesticide wastes are acute hazardous. Improper disposal of excess pesticide, spray mixture or rinse is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

CONTAINER HANDLING: Non-refillable container. Do not reuse or refill this container. Triple rinse (or equivalent) this container promptly after emptying. Triple rinse as follows: Empty remaining contents into application equipment or a mix tank. Fill the container ¼ full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinse into application equipment or a mix tank. Store rinse water in a mix tank or for disposal. Repeat this procedure two more times. Then offer for recycling, if available, or reconditioning, or puncture and dispose of in a sanitary landfill, or by other procedure approved by state and local authorities. If rinse cannot be used, follow pesticide disposal instructions. If not triple rinsed, these containers are acute hazardous wastes and must be disposed in accordance with local, state, and federal regulations. DO NOT CUT or weld metal containers.

DANGER

FIRST AID

If in eyes:
- Hold eye open and rinse slowly and gently with water for 15-20 minutes.
- Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.

If skin or clothing:
- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15-20 minutes.

If on skin or clothing:
- Call a poison control center or a doctor immediately for treatment advice.

If swallowed:
- Do not induce vomiting unless told to do so by the poison control center or doctor.
- Do not give anything by mouth to an unconscious person.

If inhaled:
- Move person to fresh air.
- If person is not breathing, call 911 or an ambulance, and then give artificial respiration, preferably mouth-to-mouth to mouth if possible.
- Call a poison control center or a doctor for further treatment advice.

NOTE TO PHYSICIAN:
Aspiration may cause lung damage. Probable mucosal damage may contraindicate the use of gastric lavage.
Have the MSDS and, if available, the product container or label with you when calling a poison control center or a doctor, or going for treatment.

DIRECTIONS FOR USE
H-130 Microbiocide will control algae and bacterial slimes found in recirculating cooling tower waters. Helps clean and loosen slime debris from cooling system surfaces. Is economical to use because it is concentrated. It must be handled with care.

METHOD OF FEEDING
Feed H-130 Microbiocide as received directly from drums by pump or means of a proportioning pump or other feed equipment to a system whose efficiency is impaired or in jeopardy of becoming affected. Apply H-130 Microbiocide in accordance with the product label and the permitting authority.

METHOD OF APPLICATION
Continuous Feed Method
Initial Dose: When the system is noticeably fouled, apply 6 fluid ounces of H-130 Microbiocide per thousand gallons of water (20 ppm active) in the system.
Subsequent Dose: Maintain treatment by starting a continuous feed of 2 to 3 fluid ounces of H-130 Microbiocide per thousand gallons of makeup water (~7-10 ppm active quat).
Intermittent Dose: When the system is noticeably fouled, apply
The 3 to 5 fluid ounces of H-130 Microbiocide per thousand gallons of water (20 ppm active) is the system.
If the dosage does not produce satisfactory results, increase dosage to 9 fluid ounces of H-130 Microbiocide per thousand gallons of water (30 ppm active). Typically, an amendment is required to maintain treatment if > 50 ppm dosages of H-130 Microbiocide are required to achieve biological control. After optimum treatment has been determined, repeat treatment weekly or increase frequency as required.
Subsequent Dose: When microbial control is evident, add 2 to 3 fluid ounces of H-130 Microbiocide per thousand gallons of water in the system weekly or as needed to maintain control (~7-10 ppm activequat).

OTHER USES:
Oil Field Water Flood Or Salt Water Disposal Systems and Fracturing Fluids
For the control of slime forming bacteria in oil field fluids or salt water disposal systems, add 5-10 ppm (active) of this product (~1-3 gallons per 3,000 barrels of water) continuously. Levels for effective control will vary depending on conditions at the site. For intermittent use, dose at a rate of 5-10 ppm (active) of this product (~1-6 gallons per 3,000 barrels of water) for 4-6 hours per day, once to four times a week as needed to maintain control.

Oilfield Injection and Waste Water
This product must be added to the water handling system at a point of uniform mixing such as the area of addition of make-up water to the holding tank.

METHOD OF APPLICATION
Continuous Feed Method
Add this product at 30 ppm (9 fluid ounces per 1000 gallons of water) when system is noticeably fouled. When microbial control is evident, add this product at 15 ppm (4.5 fluid ounces per 1000 gallons) to maintain treatment.
Batch Treatment: Add this product at 180 ppm (46 fluid ounces per 1000 gallons of water) over a period of 4-6 hours. Monitor the system is noticeably fouled. When microbial control is evident, add this product at 90 ppm (23 fluid ounces per 1000 gallons of water) over a period of 4-6 hours one or more times per week.
Gas Storage Wells and Systems
This product will only be effective for the length of time the water is present in the system. Injection may be repeated yearly or as needed to maintain control.

Driping, Completion and Workover Fluids Systems
Add to the fluid system at a point of uniform mixing such as a circulating mud tank. Initial treatment: 65-100 ppm (active) added to a freshly prepared fluid. Maintenance dosage: 65-100 ppm as to maintain control.

Packer Fluids
Add to a packer fluid at a point of uniform mixing tank as a circulating holding tank at a rate of 65-80 ppm (active) 1% of barrels of fluid to a freshly prepared fluid depending on the severity of contamination. Seal the fresh packer fluid in the well casing the production tube.

Drilling
Treat water used to hydrotest pipelines or vessels at 65-1000 ppm active depending on the water quality and length of time the equipment will remain idle.

Thermal Processing and Pasteurization Operations
May be added to thermal processing water, parchment cooling water or dairy sweetwater to control slime forming bacteria and deposit formation. Use 3-15 ppm active quat.

H-130 Microbiocide will control algae and bacterial slimes found in recirculating cooling tower waters. Helps clean and loosen slime debris from cooling system surfaces. Is economical to use because it is concentrated. It must be handled with care.

KEEP OUT OF REACH OF CHILDREN

DANGER

If in eyes:
· Hold eyes open and rinse slowly and gently with water for 15-20 minutes.
· Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
· Call a poison control center or a doctor immediately for treatment advice.

If on skin or clothing:
· Take off contaminated clothing.
· Rinse skin immediately with plenty of water for 15-20 minutes.
· Call a poison control center or a doctor for treatment advice.

If swallowed:
· Do not induce vomiting unless told to do so by the poison control center or doctor.
· Give 1 to 2 fluid ounces of H-130 Microbiocide per thousand gallons of water (10-20 ppm active) in the system. If the dosage does not produce satisfactory results, increase dosage to 2 fluid ounces of H-130 Microbiocide per thousand gallons of water (30 ppm active). Typically, an antimicrobial is required to maintain control if < 5 ppm dosages of H-130 Microbiocide are required to achieve biological control. After optimum treatment has been determined, treat weekly to increase frequency as required.

Subsequent Dose: When microbial control is evident, add 2 to 3 fluid ounces of H-130 Microbiocide per thousand gallons of water (7-10 ppm active) every 4 hours one or more times per day.

NOTE TO PHYSICIAN:
· This product is toxic to fish, aquatic invertebrates, oysters, and shrimp. Do not discharge a sludge containing this product to waterways without proper permits or after treatment.
· Avoid eye, skin, and respiratory tract contact.
· A suitable safety shower and eye flush station should be located near the treatment system and the area where this product is being used.
· Treat water used to hydrotest pipelines or vessels at 65 - 1000 ppm active depending on the water quality and the system to be treated.
· For intermittent use, dose at a rate of 5 - 20 ppm (active) of this product (1½ - 6 gallons per 3,000 barrels of water) to maintain control.
· For continuous use, add 5 - 10 ppm (active) of this product (1½ - 3 gallons per 3,000 barrels of water) continuously. Levels above 30ppm will control slime forming and sulfate reducing bacteria in oil field water flood or salt water disposal systems.
· For the control of slime forming and sulfate reducing bacteria in oil field water flood or salt water disposal systems, add 5 - 10 ppm (active) of H-130 Microbiocide per thousand gallons of water (10-20 ppm active) in the system. Treatment rates will vary depending on conditions at the site. For intermittent use, dose at a rate of 5 - 20 ppm (active) of this product (1½ - 6 gallons per 3,000 barrels of water) to maintain control.
· For the controls of slime forming and sulfate reducing bacteria in oil field water flood or salt water disposal systems, add 5 - 10 ppm (active) of H-130 Microbiocide per thousand gallons of water (10-20 ppm active) in the system. Treatment rates will vary depending on conditions at the site. For intermittent use, dose at a rate of 5 - 20 ppm (active) of this product (1½ - 6 gallons per 3,000 barrels of water) to maintain control.
· For the controls of slime forming and sulfate reducing bacteria in oil field water flood or salt water disposal systems, add 5 - 10 ppm (active) of H-130 Microbiocide per thousand gallons of water (10-20 ppm active) in the system. Treatment rates will vary depending on conditions at the site. For intermittent use, dose at a rate of 5 - 20 ppm (active) of this product (1½ - 6 gallons per 3,000 barrels of water) to maintain control.
