This product is not to be used as a terminal sterilant/high-level disinfectant against other organisms.

Repeated use of the product may be required to ensure that the surface remains visibly wet for 3 minutes at 68°F/20°C.

Pre-clean ultrasound gel from external transducer to be disinfected. Then thoroughly wet surface with a new CaviWipes towelette. Repeated use of the towelette can be used for this purpose.

Body Fluids:

Cleaning and disinfection of biological materials must be performed in the following order of priority.

1. Non-contaminated surfaces; surfaces not visibly contaminated with blood, body fluids, biological materials, or solidified body fluids.

2. Surfaces contaminated with blood, body fluids, and biological or solidified materials. Surfaces located in or near the immediate area of a patient, including but not limited to patient’s bed and bedside tables, call buttons, televisions, and telephones. Surfaces must be cleaned and disinfected to prevent transmission of microbes on a patient’s skin, including sites of skin trauma.

CaviWipes™ (disinfecting towelettes) are towelettes disposable papers impregnated with CaviCide™, which are marketed for use in hospital, dental, clinic, and other medical areas. The major ingredients of CaviCide™ are polyquaternium derivatives (quaternary ammonium disinfectant) and isopropyl alcohol. The products provide broad-spectrum activity against microorganisms on hard, non-porous surfaces when used as directed.
