Read this entire label and follow all use directions and precautions.

IMPORTANT:

Do not prepare bait on the ground surface. And by the application methods indicated on this label.

USE RESTRICTIONS:

This product may be used only to control eastern moles (Scalopus aquaticus), star-nosed mole (Condylura cristata), hairy-tailed mole (Parascalops breweri), coast moles (Parascalops breweri), hairy-tailed moles (Parascalops breweri), or burrowing mole (Talpa) on lawns, turf areas, and other non-food grassy areas. This product may not be applied at the use rates and by the application methods indicated on this label. Prior to treatment, determine which burrow systems are active. Using a broomstick, probe ground in vicinity of conical mounds or surface ridges until main underground runway is detected. For shallow burrows, open system with a shovel and leave open. Treat only active burrow systems. For deep burrows, locate main runway by prodding. Remove the cap from the tip of the applicator syringe and turn dosing ring to mark indicating half runnel. Place half an ounce of bait (one-half of the contents of one syringe) through probe or shovel opened hole at each bait placement location. Make sure that all bait placements per burrow system are treated. Cover holes made to enter tunnel with soil and soil, but do not allow dirt to sift into the burrow system.

FOLLOW-UP: Check effects of treatment 4-5 days after bait application by opening and marking burrows in the manner used to check for initial activity. Return 2-3 days later and retreat all active burrows. Maximum application rate is 1-ounce/10,000 sq. ft.

CAUTION:

This product contains a chemical known to the state of California to cause birth defects or other reproductive harm.
