First Aid

If swallowed:  
• Immediately call a poison control center or doctor.  
• Do not induce vomiting unless told to do so by the poison control center or doctor.  
• Do not give any liquid to the person.  
• Do not give anything by mouth to an unconscious person.

If in eyes:  
• Hold eyelid open and rinse slowly and gently with water for 15-20 minutes.  
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. In case of Medical emergencies or health and safety inquiries or in case of fire, leaking or damaged containers, information may be obtained by calling 1-800-334-7577.

Note to Physician: Contains petroleum distillates. May pose an aspiration pneumonitis hazard.

Engineering controls

Pilots must use an enclosed cockpit that meet the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides.[40 CFR 170.24(d)(6)].

Human flagging is prohibited. Flagging to support aerial application is limited to use of the Global Positioning System (GPS) or mechanical flaggers.

Environmental hazards

This pesticide is extremely toxic to aquatic organisms, including fish and invertebrates. Runoff from treated areas or deposit of spray droplets into a body of water may be hazardous to fish and aquatic invertebrates.

Before making the first application in a season, it is advisable to consult with the state or tribal agency with primary responsibility for pesticide regulation to determine if any other regulatory requirements exist.

Do not apply over bodies of water (lakes, rivers, permanent streams, natural ponds, commercial fish ponds, swamps, marshes, or estuaries), except when necessary to target areas where adult mosquitoes are present, and weather conditions will facilitate movement of applied material away from the water in order to minimize incidental deposition into the water body. Do not contaminate water when disposing of equipment rinsates or wash waters.

This pesticide is highly toxic to bees exposed to direct treatment on blooming crops or weeds. Do not apply this product or allow drift when bees are actively foraging in the treatment area, except when applications are made to prevent or control a threat to public and/or animal health determined by a state, tribal or local health or vector control agency on the basis of documented evidence of disease causing agents in vector mosquitoes, or the occurrence of mosquito-borne disease in animal or human populations, or if specifically approved by the state or tribe during a natural disaster recovery effort. Applications should be timed to provide the maximum possible interval between treatment and the next period of bee activity.

Directions for use

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

Read entire label for directions

Shake or Agitate Thoroughly Before Diluting: Diluted product must be thoroughly agitated before use. Avoid prolonged storage of excess formulation in equipment.

Notice: This concentrate is for dilution with water only. It can not be diluted in oil.

(continued on back label)
Indian spinach), Dock (sorrel), Endive (escarole), Lettuce (head and leaf), Orach, Parsley, Purslane (garden and leafy vegetables, including: squash), Watermelon (includes hybrids and/or varieties of Citrullus lanatus).

vegetable marrow and zucchini, and winter squash types such as acorn squash and spaghetti squash, cucuzza, hechima, Chinese okra).

areas. Application can be made where the following crops are present:

in vector mosquitoes or the occurrence of mosquito-borne disease in animal or human populations, or if specifically approved by the state or tribe during a natural disaster recovery effort.

to prevent or control a threat to public and/or animal health determined by a state, tribal or local health or vector control agency on the basis of documented evidence of disease causing agents in vector mosquitoes or the occurrence of mosquito-borne disease in animal or human populations, or if specifically approved by the state or tribe during a natural disaster recovery effort.

Application Rate

AQUA-RESLIN may be applied through ULV Cold Aerosol Generators, or other equipment demonstrated the capacity to deliver an even distribution of the labeled rate over the desired spraying area. Application equipment must be adjusted so that the volume median diameter produced is less than 70 microns (Dv 0.9 < 100 μm). The effects of flight speed and, for non-rotary nozzles, nozzle configuration on the droplet size spectrum must be considered. Directions from the equipment manufacturer or other responsible entity must be used to adjust equipment to produce acceptable droplet size spectra. Application equipment must be tested at least annually to confirm that pressure at the nozzle andifice orifice (not to exceed 0.18 pounds of permethrin per acre) in any given season. More frequent applications may be made to prevent or control a threat to public and/or animal health determined by a state, tribal or local health or vector control agency on the basis of documented evidence of disease causing agents in vector mosquitoes or the occurrence of mosquito-borne disease in animal or human populations, or if specifically approved by the state or tribe during a natural disaster recovery effort.

in vector mosquitoes or the occurrence of mosquito-borne disease in animal or human populations, or if specifically approved by the state or tribe during a natural disaster recovery effort.

Do not retreat site more than once in 3 days. Do not apply at rates in excess of 0.007 pounds of permethrin per acre in any given 24 hour period. An optimum swath is created when flight speed and nozzle configuration conform to the equipment manufacturer’s recommended swath width. Apply at a rate not to exceed 0.007 pounds of permethrin per acre in any given 24 hour period. Application equipment must be adjusted so that the volume median diameter produced is less than 70 microns (Dv 0.9 < 100 μm). in vector mosquitoes or the occurrence of mosquito-borne disease in animal or human populations, or if specifically approved by the state or tribe during a natural disaster recovery effort.

AQUA-RESLIN may be applied through non-thermal ULV application equipment and base mix calculations on the basis of 40 pounds of finished spray per acre in any given 24 hour period. Application equipment must be adjusted so that the volume median diameter produced is less than 70 microns (Dv 0.9 < 100 μm). Application equipment must be adjusted so that the volume median diameter produced is less than 70 microns (Dv 0.9 < 100 μm).
