TRILUX® 33

PRODUCT DESCRIPTION: TRILUX® 33 was developed for use on exterior buildings yet can be used on fiberglass, wood, and metal surfaces. TRILUX® 33 offers a technology designed for ease of application and a system designed to last a lifetime. The performance of TRILUX® 33 is directly related to the quality of the pigments and the system used to apply the material. New applications on underlayment materials and parts in new, old, and existing structures can be coated with the TRILUX® 33 coating system (the performance of TRILUX® 33 has not been tested on overlying commercial roofs, but can be coated with TRILUX® 33. It is a cost-effective way to revitalize an old roof.

TRILUX® 33 is part of Interlux’s Paints and Coatings line. Interlux Finesse 100 is a water-based, clear urethane coating that can be used as a topcoat on TRILUX® 33 to enhance its appearance and provide extra durability.

PREPARATION

BASE ALUMINUM: On small scale, make sure that the surface is clean and free of any contaminants, such as dust, debris, or oils. Thoroughly clean the surface with a soap and water solution or a chemical cleaner, such as a degreaser or a power-washing solution. Rinse the surface with water to remove any residue. Apply a primer to the surface, such as Interlux’s Aluminum Primer, to ensure a good bond between the surface and the coating.

ALUMINUM-PREVIOUSLY PAINTED WITH ANTI-OFF塁 PAINT: Remove any existing anti-off paint, such as aluminum paint, by applying a solvent-based cleaner or a chemical stripper. Thoroughly clean the surface with a degreaser or a power-washing solution, and allow the surface to dry completely. Apply an appropriate primer, such as Interlux’s Aluminum Primer, to the surface to ensure a good bond between the surface and the coating.

APPLICATION

For applications on residential (non-commercial) users:

- Do not apply by airbrush, spray, or brush.
- Do not apply more than one coat of TRILUX® 33 in 24 hours.
- Do not apply in direct sunlight or in temperatures below 50°F.
- Do not apply in relative humidity above 90%.
- Do not apply in temperatures below 50°F. The coating may not cure properly in temperatures below 50°F.
- Do not apply on surfaces that are wet, damp, or have any form of contamination.

APPLICATION PROCEDURES

- Apply at least 3-4 mls of TRILUX® 33 in one coat or undercoat to ensure excellent coverage. Overfilling can affect the coating's performance and longevity.
- Apply the coating uniformly and evenly to ensure a smooth finish. Use a roller, brush, or sprayer to apply the coating.
- Allow the coating to dry for at least 24 hours before applying a second coat. This will ensure a proper bond between the coats.
- Apply a topcoat of Interlux Finesse 100 to enhance the look and durability of the coating.
