Hi-Yield
2,4-D AMINE NO. 4
A SELECTIVE WEED KILLER

SEE INSIDE BOOKLET FOR FIRST AID AND ADDITIONAL PRECAUTIONARY STATEMENTS.

FOR CONTROL OF MANY BROADLEAF WEEDS AND BRUSH CONTROL IN CORN, SOYBEANS (PREPLANT), SMALL GRAINS, PASTURES, RANGELANDS, AND OTHER LISTED CROPS AND IN NON-CROP AREAS SUCH AS LAWNS, ORNAMENTAL TURF, DRAINAGE DITCHES, FENCEOWNS, RIGHTS-OF-WAY, ALSO FOR AQUATIC WEED CONTROL.

KEEP OUT OF REACH OF CHILDREN.

DANGER

ACTIVE INGREDIENT:
Orthoammonium Salt of 2,4-Dichlorophenoxyacetic Acid
66.01%
OTHER INGREDIENTS:

TOTAL

166.00%

Inorganic Ash

39.34%
3 lbs., g.p.

NET CONTENTS ONE QUART (32 FL. OZS.)

CORROSIVE: Causes irreversible eye damage. Do not get in eyes or on clothing. Avoid contact with skin. Harmful if swallowed. Avoid inhaling vapor or spray mist.

PERSONAL PROTECTIVE EQUIPMENT (PPE):
Some materials that are chemical-resistant to this product are barrier laminates, butyl rubber, nitrile rubber or viton. If you want more options, follow the instructions for category A on an EPA chemical-resistance category selection chart.

PRECAUTIONARY STATEMENTS:

HAZARDS TO HUMANS AND DOMESTIC ANIMALS:

DANGER

If in eyes:
Hold eye open and rinse slowly and gently with water for 15 to 20 minutes.
Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
Call a poison control center or doctor for treatment advice.

If swallowed:
Call a poison control center or doctor immediately for treatment advice.
Have person sip a glass of water if able to swallow.
Do not induce vomiting unless told to do so by a poison control center or doctor.
Do not give anything by mouth to an unconscious person.

If on skin or clothing:
Take off contaminated clothing.
Rinse skin immediately with plenty of water for 15 to 20 minutes.
Call a poison control center or doctor for treatment advice.

HOT LINE NUMBER
Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact 1-877-325-1840 for emergency medical treatment information.

NOTE TO PHYSICIAN: This product contains a phenoxy herbicidal chemical. There is no specific antidote. All treatments should be based on observed signs and symptoms of distress in the patient. Probable mucosal damage may contradict the use of gastric lavage. Over exposure to materials other than this product may have occurred.

## FIRST AID

**IF IN EYES:**  
- Hold eye open and rinse slowly and gently with water for 15 to 20 minutes.  
- Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.  
- Call a poison control center or doctor for treatment advice.

**IF SWALLOWED:**  
- Call a poison control center or doctor immediately for treatment advice.  
- Have person sip a glass of water if able to swallow.  
- Do not induce vomiting unless told to do so by a poison control center or doctor.  
- Do not give anything by mouth to an unconscious person.

**IF ON SKIN OR CLOTHING:**  
- Take off contaminated clothing  
- Rinse skin immediately with plenty of water for 15 to 20 minutes.  
- Call a poison control center or doctor for treatment advice.

## HOT LINE NUMBER

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact 1-877-325-1840 for emergency medical treatment information.

## NOTE TO PHYSICIAN:

This product contains a phenoxy herbicidal chemical. There is no specific antidote. All treatments should be based on observed signs and symptoms of distress in the patient. Probable mucosal damage may contradict the use of gastric lavage. Over exposure to materials other than this product may have occurred.

## PRECAUTIONARY STATEMENTS

### HAZARDS TO HUMANS AND DOMESTIC ANIMALS

**DANGER**

**CORROSIVE:** Causes irreversible eye damage. Do not get in eyes or on clothing. Avoid contact with skin. Harmful if swallowed. Avoid inhaling vapor or spray mist.

**PERSONAL PROTECTIVE EQUIPMENT (PPE)**

Some materials that are chemical-resistant to this product are barrier laminate, butyl rubber, nitrile rubber or viton. If you want more options, follow the instructions for category A on an EPA chemical-resistance category selection chart.
All mixers, loaders, applicators, flaggers, and other handlers must wear:

- long-sleeved shirt and long pants,
- shoes and socks, plus
- chemical-resistant gloves when applying with any handheld nozzle or equipment, mixing or loading, cleaning up spills or equipment, or otherwise exposed to concentrate.
- chemical-resistant apron when mixing or loading, cleaning up spills or equipment, or otherwise exposed to the concentrate.
- protective eyewear (goggles or face shield)

See engineering controls for additional requirements. Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

ENGINEERING CONTROLS STATEMENTS: When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d) (4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS. Pilots must use an enclosed cockpit that meets the requirements listed in the WPS for agricultural pesticides[40 CFR 170.240(d)(6)].

USER SAFETY RECOMMENDATIONS

USERS SHOULD:

- Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing. If pesticide gets on skin, wash immediately with soap and water.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS

This product may be toxic to fish and aquatic invertebrates and may adversely affect non-target plants. Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark except as noted on appropriate labels. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas. Do not contaminate...
water when disposing of equipment wash water or rinsate.
This product contains a chemical with properties and characteristics associated with the chemicals detected in groundwater. The use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination. Application around a cistern or well may result in contamination of drinking water or groundwater.
For Aquatic Uses: Fish breathe dissolved oxygen in the water and decaying weeds also use oxygen. When treating continuous, dense weed masses, it may be appropriate to treat only part of the infestation at a time. For example, apply the product in lanes separated by untreated strips that can be treated after vegetation in treated lanes has disintegrated. During the growing season, weeds decompose in a 2 to 3 week period following treatment. Being treatment along the shore and proceed outwards in bands to allow fish to move into untreated areas.
Waters having limited and less dense weed infestations may not require partial treatments.

**DIRECTIONS FOR USE**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. READ ENTIRE LABEL BEFORE USING THIS PRODUCT. USE STRICTLY IN ACCORDANCE WITH LABEL PRECAUTIONARY STATEMENTS AND DIRECTIONS. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation. Product should not be used in or near greenhouses.

**AGRICULTURAL USE REQUIREMENTS**

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about Personal Protective Equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard. Do not enter or
AGRICULTURAL USE REQUIREMENTS (Continued)
allow worker entry into treated areas during the Restricted-Entry Interval (REI) of 48 hours. PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is: coveralls, chemical-resistant gloves made of any water-proof material, shoes plus socks, and protective eyewear.

NON-AGRICULTURAL USE REQUIREMENTS
The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses. Do not enter or allow people (or pets) to enter the treated area until sprays have dried.

SPRAY DRIFT MANAGEMENT
A variety of factors including weather conditions (e.g., wind direction, wind speed, temperature, relative humidity) and method of application (e.g., ground, aerial, airblast, chemigation) can influence pesticide drift. The applicator must evaluate all factors and make appropriate adjustments when applying this product.

Droplet Size
When applying sprays that contain 2,4-D as the sole active ingredient, or when applying sprays that contain 2,4-D mixed with active ingredients that require a Coarse or coarser spray, apply only as a Coarse or coarser spray (ASAE standard 572) or a volume mean diameter of 385 microns or greater for spinning atomizer nozzles. When applying sprays that contain 2,4-D mixed with other active ingredients that require a medium or more fine spray, apply only as a Medium or coarser spray (ASAE standard 572) or a volume mean diameter of 300 microns or greater for spinning atomizer nozzles.

Wind Speed
Do not apply at wind speeds greater than 15 mph. Only apply this product if the wind direc-
tion favors on-target deposition and there are not sensitive areas (including, but not limited to, residential areas, bodies of water, known habitat for nontarget species, nontarget crops) within 250 feet downwind. If applying a Medium spray, leave one swath unsprayed at the downwind edge of the treated field.

**Temperature Inversions**

If applying at wind speeds less than 3 mph, the applicator must determine if: a) conditions of temperature inversion exist, or b) stable atmospheric conditions exist at or below nozzle height. Do not make applications into areas of temperature inversions or stable atmospheric conditions.

**Susceptible Plants**

Do not apply under circumstances where spray drift may occur to food, forage, or other plantings that might be damaged or crops thereof rendered unfit for sale, use or consumption. Susceptible crops include, but are not limited to, cotton, okra, flowers, grapes (in growing stage), fruit trees (foliage), soybeans (vegetative stage), ornamentals, sunflowers, tomatoes, beans, and other vegetables, or tobacco. Small amounts of spray drift that might not be visible may injure susceptible broadleaf plants.

**Other State and Local Requirements**

Applicators must follow all state and local pesticide drift requirements regarding application of 2,4-D herbicides. Where states have more stringent regulations, they must be observed.

**Equipment**

All aerial and ground application equipment must be properly maintained and calibrated using appropriate carriers or surrogates. The boom length must not exceed 75% of the wingspan or 90% of the rotor blade diameter.

Release spray at the lowest height consistent with efficacy and flight safety. Do not release spray at a height greater than 10 feet above the crop canopy unless a greater height is required for aircraft safety. This requirement does not apply to forestry or rights-of-way applications.

When applications are made with a crosswind, the swath will be displaced downwind. The applicator must compensate for this by adjusting the path of the aircraft upwind.

Do not apply with a nozzle height greater than 4 feet above the crop canopy.
GENERAL INFORMATION

This product is a water dilutable Amine especially prepared for use on crops and weeds where a susceptible crop in the near vicinity may be injured by a more volatile product. It is recommended for control of numerous Broadleaf Weeds and certain, 2,4-D susceptible Woody Plants without injury to most established grasses. In cropland, 2,4-D is more effective than Amines for controlling hard-to-kill weeds such as Bindweed, Thistle, Smartweed, Wild Garlic, Curly Dock, Tansy Ragwort, and Wild Onions. For best results, apply this product as a water or oil spray during warm weather when young succulent weeds or brush are actively growing. Application under drought conditions often will give poor results. The lower recommended rates will be satisfactory on susceptible Annual Weeds. For Perennial Weeds and conditions such as the very dry areas of the Western states, where control is difficult, the higher recommended rates should be used.

HI-YIELD® 2,4-D AMINE NO. 4 will kill or control the following weeds in addition to many other noxious plants susceptible to 2,4-D: Alder, Alligator Weed, American Lotus, Arrowhead, Artichoke, Aster, Austrian Fieldcress, Beggarstickle, Biden, Bindweed, Bittercress, Bitterweed, Bitter Wintercress, Black-eyed Susan, Blessed Thistle, Blue Lettuce, Box Elder, Broomweed, Buckhorn, Bullnettle, Bull Thistle, Bulrush, Burdock, Bur Ragweed, Buttercup, Canada Thistle, Carolina Geranium, Carpetweed, Catnip, Chickweed, Chicory, Cinquefoil, Cockle, Cocklebur, Coffee Bean, Coffeeweed, Common Sowthistle, Creeping Jenny, Creton, Curly Indigo, Dandelion, Devil's Claw, Dock, Dogbane, Duckweed, Elderberry, Flea Bane (daisy), Flaxweed, Florida Pusley, Frenchweed, Galinsoga, Goatsbeard, Goldenrod, Goosefoot, Ground Ivy, Gumweed, Healall, Hemp, Henbit, Hoary Cress, Honeysuckle, Horsetail, Indigo, Indiana Mallow, Ironweed, Jerusalem Artichoke, Jewelweed, Jimsonweed, Kochia, Knotweed, Lambsquarter, Locoweed, Lupine, Mallow, Many Flowered Aster, Marijuana, Marshelder, Mexican Weed, Morningglory, Mousetail, Muskthistle, Mustard, Nettle, Nutgrass, Orange Hawkweeed, Parrot Feather, Parsnip, Pennywort, Pepperweed, Pigweed, Plantain, Poison Hemlock, Poison Ivy, Pokeweed, Poor Joe, Povertyweed, Prickly Lettuce, Primrose, Puncture Vine, Purslane, Ragweed, Red Clover, Rush, Russian Thistle, Sagebrush, St. Johnswort, Salsify, Shepherdspurse, Sicklepod, Smartweed, Sneezeweed, Southern Wild Rose, Sowthistle, Spanishneedle, Spatterdock, Speedwell, Stinging Nettle, Stinkweed, Sumac, Sunflower, Sweet Clover, Tanweed, Tarweed, Thistle, Tcadflax, Tumble

Generally the lower dosages given will be satisfactory for young, succulent growth of sensitive weed species. For less sensitive species and under conditions where control is more difficult, the higher dosages will be needed. Apply this product during warm weather when weeds are young and growing actively. Unless otherwise recommended, suggested application rates may be from 1 to 10 gallons of total spray by air or 5 to 25 gallons by ground application equipment. If band treatment is used, base the dosage rate on the actual area to be sprayed. Although water quantities may vary due to different types of application equipment, sufficient water must be used to provide for complete and uniform coverage. Higher water gallonage may be used if desired to improve spray coverage. In all cases, use the same recommended amount of 2,4-D per acre. When product is used for weed control in crops, the growth stage of the crop must be considered. For crop uses, do not mix with oil, surfactants, or other adjuvants unless specifically recommended on label. To do so may reduce herbicides selectivity and could result in crop damage. If you are not prepared to accept some degree of crop injury, do not use this product. Crop varieties vary in response to 2,4-D and some are easily injured. Apply this product to varieties known to be tolerant to 2,4-D. If you are uncertain concerning tolerant varieties or local use situations that may affect crop tolerance to 2,4-D, consult your seed company, State Agricultural Extension Service or qualified crop consultant's advice.

**Aerial Applications** should be used only when there is no danger of drift to susceptible crops. Many States have regulations concerning aerial application of 2,4-D formulations. Consult local regulatory authorities before making applications. Do not apply when temperature exceeds 90°F. Read and follow all directions and precautions on this label and on the labels of any products for which a tank mixture is being considered.

**COMPATIBILITY:** If this product is to be tank mixed with fertilizers or with other pesticides, compatibility should be tested prior to mixing. To test for compatibility, use a small container and mix a small amount (0.5 to 1 quart) of spray, combining all ingredients in the same ratio as the anticipated use. If any indications of physical incompatibility develop, do not use this mixture for
spraying. Indications of incompatibility usually will appear within 5 to 15 minutes after mixing.

**TO PREPARE THE SPRAY:** Mix this product only with water. Add about half the water to the mixing tank, then add the HI-YIELD® 2,4-D AMINE NO. 4 with agitation, and finally the rest of the water with continuing agitation. Note: Adding oil, wetting agent, or other surfactant to the spray may increase effectiveness on weeds, but also may reduce selectivity to crops resulting in crop damage.

### SELECTIVE WEEDING IN CROPS

**USE IN LIQUID NITROGEN SOLUTIONS:** For late season application in Corn, Pastures, or Small Grains in one operation for control of your Smartweed, Cocklebur, Annual Morningglory and other Annual Broadleaf weeds less than 1 inch high. Field should be as clean as possible and Corn 20 to 30 inches tall. Apply 1 pint with 80 to 120 lbs. Nitrogen per acre; the spray must be prepared by first adding the required amount of liquid nitrogen solution to spray tank. Next dilute 1 pint of HI-YIELD® 2,4-D AMINE NO. 4 with 2 quarts clean water for each acre to be treated with one tankful. Start the tank agitator and slowly add the diluted 2,4-D solution. Spray immediately, maintaining continuous agitation until spray tank is empty. Direct the spray to lower 3 to 4 inches of Corn stalk. Use spray equipment designated to handle corrosive liquid nitrogen solutions. After spraying, remove any remaining solution and rinse rig thoroughly with water. Mix only one tank at a time. Do not spray during or immediately following cold, near freezing weather.

**CORN (Field, Sweet and Popcorn):**

- Pre-plant – 1 to 2 pints
- Pre-emergent – Average Conditions – 2 to 4 pints
- Emergent – 1 pint
- Post-emergent – Average Conditions – ½ to 2 pints
- Dry Conditions* – ½ to 1 pint
- Pre-harvest – 1 to 2 pints

*For Western States – Arizona, Idaho, Montana, Nevada, Oregon, Utah, Washington and Wyoming

All with specified amounts of water to make per acre applications. Use lower rates of product for easily-killed weeds, on inbreds, and when Corn is growing rapidly. Do not cultivate for about 2 weeks after treatment while Corn is brittle.
**Pre-plant:** Apply in 15 to 30 gallons of water per acre to control emerged Broadleaf Weed seedlings or existing cover crops prior to planting Corn. Apply 7 to 14 days before planting. Do not use on light, sandy soil or where soil moisture is inadequate for normal weed growth. Use high rate for control of less susceptible weeds or cover crops, such as Alfalfa.

**Pre-Emergent: (For Annual Grasses and Broadleaf Weeds)** – Apply in 15 to 30 gallons of water per acre. Apply product to emerged weeds from 3 to 5 days after planting, but before Corn emerges. Do not use on very light, sandy soils. Use the higher rates on heavy soils. Plant Corn as deep as practical. Product will not control weeds which have not emerged.

**Emergent** – Apply in 5 to 30 gallons of water per acre ground application, 1 to 5 gallons of water by air, just as Corn plants are breaking ground.

**Post-emergent: (For Broadleaf Weeds)** – Apply to 1/2 to 1 pint in 8 to 15 gallons of water per acre. Use low rates on inbreds. Best results are usually obtained when weeds have germinated and Corn is 4 to 18 inches tall. As soon as Corn is over 8 inches tall, or beyond the 5-leaf stage, use drop nozzles to keep spray off Corn foliage as much as possible; direct spray over tops of weeds but not over the Corn. Corn is susceptible to injury shortly after emergence and after unfolding of leaves. Do not spray during this period nor after first tassels appear to dough stage. If Corn is growing rapidly and temperature and soil moisture are high, use 1/2 pint per acre to reduce possibility of crop damage. Delay cultivation for 8 to 10 days to prevent stalk breakage due to temporary brittleness caused by 2,4-D. Application rates of up to 1 pint per acre may be used to control some hard-to-control weeds. For resistant weeds, use up to 2 pints per acre though Corn injury may result. Do not use higher rates unless possible crop injury will be acceptable. After application, delay cultivation for 8 to 10 days to allow the Corn to overcome any temporary brittleness. However, the possibility of injury to the Corn is increased. Do not use with Atrazine, oil or other adjuvants, unless approved by a seed company. Since the tolerance to 2,4-D of individual hybrids varies, consult your seed supplier, Local Extension Service, Agricultural Experiment Station, or University Weed Specialist for information.

**Pre-Harvest:** After the hard dough or denting stage, apply 1 to 2 pints in 1 to 5 gallons of water per acre by air or 5 to 30 gallons of water by ground equipment to suppress Perennial Weeds, decrease weed seed production, and control tall weeds such as Bindweed, Cocklebur, Dogbane, Jimsonweed, Ragweed, Sunflower, Velvetleaf and vines that interfere with harvesting. The high rate will be needed for tough weeds under stress.
USE PRECAUTIONS FOR FIELD AND POPCORN

Do not use treated crop as fodder for 7 days following application.
The preharvest interval (PHI) is 7 days.
Maximum of 6 pints of product per acre per crop cycle.

Preplant or pre-emergence:
Limited to one preplant or pre-emergence application per crop cycle.
Maximum of 2 pints of product per acre per application.

Post-emergence:
Limited to one Post-emergence application per crop cycle.
Maximum of 1 pint of product per acre per application.

Preharvest:
Limited to one preharvest application per crop cycle.
Maximum of 3.25 pints of product per acre per application.

USE PRECAUTIONS FOR SWEETCORN:
Do not use treated crop as fodder for 7 days following application.
The preharvest interval (PHI) is 45 days.
Minimum of 21 days between applications.
Maximum of 3.25 pints of product per acre per crop cycle.

Preplant or pre-emergence:
Limited to one preplant or pre-emergence application per crop cycle.
Maximum of 2.25 pints of product per acre per application.

Post-emergence:
Limited to one Post-emergence application per crop cycle.
Maximum of 1 pint of product per acre per application.

SORGHUM (Milo): Post-emergent control in average conditions, use 2/3 to 1 pint when Sorghum is 5 to 8 inches tall. Use 1 pint when Sorghum is 5 to 15 inches tall with suggested volume of 5 gallons of water by air or 6 to 20 gallons with ground equipment to make per acre applications. For dry conditions (Western States), use 1/2 to 1 pint. Apply to Sorghum when crop is 5 to 15 inches high to top of canopy with secondary roots well established. If Sorghum is taller than
8 inches, use drop nozzles to keep the spray off the foliage as much as possible. Do not apply during boot, flowering or early dough stage. Reduce spray drift by keeping the boom and spray nozzles as low as possible. Rates of up to 1 pint per acre may be used to control some hard-to-control weeds. However, the chance of crop injury is increased with higher rates. Do not use with oil. Because temporary injury may occur if conditions of high temperature and high soil moisture exist, use lower rate. If it is necessary to apply Hi-Yield® 2,4-D AMINE NO. 4 under these conditions, use no more than 2/3 pint per acre. Varieties vary in tolerance to 2,4-D and some hybrids are quite sensitive. Spray only varieties known to be tolerant to 2,4-D. Contact Seed Company or your Agricultural Experiment Station or Extension Service Weed Specialist for this information.

USE PRECAUTIONS FOR SORGHUM
The preharvest interval (PHI) is 30 days.
Do not permit meat or dairy animals to consume treated crop as fodder or forage for 30 days following application.

Post-emergence (acid, salts, and amines):
Limited to 1 application per crop cycle.
Maximum of 2.25 pints of product per acre per application.

NOTE: Corn and Sorghum hybrids vary in tolerance to 2,4-D. Some are easily injured. Spray only varieties known to be tolerant to 2,4-D. Consult the Seed Company or your Agricultural Experiment Station or Extension Service Weed Specialist for this information.

SMALL GRAINS (Barley, Oats, Wheat, Rye), not underseeded with a Legume: Wheat, Barley, Rye
- Annual Weeds - Average Conditions – 1/2 to 1 pint
  Dry Conditions (Western States) – 1 to 2 pints
- Perennial Weeds - Average Conditions – 1 pint
  Dry Conditions (Western States) – 1 1/4 to 2 pints
- Pre-harvest - Average Conditions – 1 pint
- Oats - Spring – 1/2 and Fall – 1 1/2 to 1 pint

For aerial application on grain, it is suggested to use this product in 1 or more gallons of water per acre and for ground application, use a minimum of 10 gallons of water per acre.
Make application in the Spring when the grain is fully tillered or stooled (usually about 4 to 8 inches high), but before jointing. Do not spray before the tiller stage nor from early boot to dough stage.

Use lower rate of product for easily-killed seedling weeds, and higher rate for older and more tolerant weeds. Do not treat grains underseeded with Legumes, and do not spray Winter Grains in the Fall. To control large weeds that will interfere with harvest or to suppress Perennial Weeds, pre-harvest treatment can be applied when grain is in the dough stage. Higher rates may be needed to handle difficult weed problems in certain areas such as under dry conditions, especially in Western areas. However, do not use unless possible crop injury will be acceptable. Oats are more sensitive to 2,4-D than other grains and should be sprayed in the Spring when well established and tillered and before jointing after crop has reached the dough stage. In Winter Grains, use 1 to 2 pints of this product to control large weeds that will interfere with harvest or to suppress Perennial Weeds. Fall Seeded Oats for grain planted in Southern U.S. - apply after full tillering but before the early bud stage. Do not spray during or immediately following cold weather.

**Spring Post-Emergence (under-seeded with Legumes)** – Apply 1/4 to 1/2 pint after grain is 8 inches tall. Do not spray grain in boot to dough stage. Do not spray Alfalfa or Sweet Clover unless the infestation is severe and injury to these Legumes can be tolerated. For the high rates on Spring Wheat and Barley as well as Winter Wheat and Rye, consult State Agricultural Experiment Station or Extension Service Weed Specialist for recommendations or suggestions to fit local conditions.

**Spring Seeded Oats**: Use 1/2 to 1 pint per acre with recommended amount of water to give good coverage. Apply after the fully tillered stage, except during the boot to dough stage.

**Fall Seeded Oats (Southern)**: Apply 1/4 to 1 1/4 pints per acre with recommended amount of water after full tillering but before early boot stage. Some difficult weeds may require the higher rates of 1 to 1 1/4 pints per acre for maximum control but injury may result. Do not spray during or immediately following cold weather.

**Pre-harvest Treatment**: Apply 1 pint with recommended amount of water per acre when grains are in the hard dough stage to control large weeds that may interfere with harvest. Best results will be obtained when soil moisture is sufficient to cause succulent weed growth.

**NOTE**: Oats are less tolerant to 2,4-D than Wheat or Barley and more likely to be injured.

**Wheat and Barley**: Control of Wild Garlic and Wild Onion. For improved control of difficult
weeds, including Wild Garlic and Wild Onion apply 1 to 2 pints of product per acre. Since these rates may injure the crop, do not use unless possible crop damage is acceptable. For the higher rates on Spring Wheat and Barley, consult your Local State Agricultural Experiment Station or Extension Service Weed Specialist for recommendations or suggestions to fit local conditions.

**Control of Wild Garlic in Stubble Grain and Corn Fields:** Following the harvest of small grains and corn, Wild garlic often produces new fall growth. This should be sprayed with 2.6 pints of product in 20 to 40 gallons of water per acre. This is a useful practice as one part of a Wild garlic control program. Do not plant any crop for three months after treatment.

**For emergency weed control in wheat:** Perennial broadleaf weeds - Apply 2.6 pints per acre when weeds are approaching bud stage. Do not spray grain in the boot to dough stage. The 2.6 pints per acre application can produce injury to wheat. Balance the severity of your weed problem against the possibility of crop damage. Where perennial weeds are scattered, spot treatment is suggested to minimize the extent of crop injury. Use lower rate if small annual and biennial weeds are the major problem. Use the higher rate if perennial weeds or annual and biennial weeds are present which are in the hard-to-kill categories as determined by local experience. The higher rates increase the risk of grain injury and should be used only where the weed control problem justifies the grain damage risk. Do not apply this product to grain in the seedling stage. For aerial application on grain, apply this product in 1 to 5 gallons of water per acre. For ground application, use a minimum of 5 gallons of water per acre.

**USE PRECAUTIONS FOR CEREAL GRAINS**
(wheat, barley, millet, oats, and rye)
The preharvest interval (PHI) is 14 days.

**Post-emergence:**
Limited to one post-emergence application per crop cycle. Maximum of 2.6 pints of product per acre per application.

**Preharvest:**
Limited to one preharvest application per crop cycle. Maximum of 1 pint of product per acre per application.
Limited to 3.6 pints of product per acre per crop cycle.
CROP STUBBLE: To control Annual Broadleaf Weeds, apply 1 to 2 pints per acre. Use the lower rate when weeds are small (2 to 3 inches tall) and actively growing. Use the higher rate on older and drought-stressed plants. To control Biennial Broadleaf Weeds, apply 1 to 2 quarts per acre. Spray while Musk Thistles or other Biennial species are in the seedling to rosette stage and before flower stalks become apparent. The lower rate can be used in the Spring during rosette stage. Use the highest rate in the Fall or after flower stalks have developed. To control Perennial Broadleaf Weeds such as Canada Thistle and Field Bindweed, apply 1 to 3 quarts per acre. Spray weeds in bud to bloom stage, or while in good vegetative growth. Do not disturb treated areas for at least 2 weeks after treatment, or until weed tops are dead. To control Wild Garlic and Onion in crop stubble, apply 2 to 3 quarts per acre to prevent new growth of Garlic following harvest.

NOTE: Do not forage for 14 days following application. Apply to weeds actively growing.

FALLOW LAND: Use 2 to 4 pints of this product in a recommended minimum of 10 gallons water per acre for ground application and recommended minimum of 2 gallons for aerial application of water per acre on Annual Broadleaf Weeds and up to 4 pints per acre on established Perennial species such as Canada Thistle and Field Bindweed. Use lower rate when Annual Weeds are small (2 to 3 inches tall) and growing actively. Use the higher rate on older and drought-stressed plants. Spray Musk Thistles and other biennial species while in seedling to rosette stage, and before flower stalks are initiated. The lower rate can be used in Spring during rosette stage. In Fall or after flower stalks have developed, use highest rate. Spray Perennial Weed in bud to bloom stage, or in good vegetative growth. Do not disturb treated area for at least 2 weeks after treatment, or until weed tops are dead.

USE PRECAUTIONS FOR FALLOW LAND
(CROP STUBBLE ON IDLE LAND, OR POSTHARVEST TO CROPS, OR BETWEEN CROPS)
Plant only labeled crops within 29 days following application.
Limited to 2 applications per year.
Maximum of 4 pints of product per acre per application.
Minimum of 30 days between applications.
GRASSES IN CONSERVATION RESERVE PROGRAM AREAS
To control annual broadleaf weeds, apply when weeds are actively growing. Use 1/2 to 1 pint per acre when weeds are small; use higher rates on older weeds. Excessive injury may result if applied to young grasses with fewer than 6 leaves or prior to grasses being well established. To control biennial and perennial broadleaf weeds in established grasses, apply at a rate of 1 to 2 quarts per acre. Apply to actively growing weeds. Treat when biennial weeds are in the seedling to rosette stage and before flower stalks become apparent. Treat perennial weeds in the bud to bloom stage.

NOTE: Suggest at least 2 gallons of water per acre by air and 5 gallons of water per acre by ground. Do not harvest or graze treated Conservation Reserve Program areas. Do not apply to grasses in the boot to dough stage if grass seed production is desired.

GRASS SEED CROPS: Use 1 to 4 pints of product in up to 30 gallons of water per acre by air or ground equipment in spring or fall to control broadleaf weeds in grass being grown for seed. Do not apply from early boot to the milk stage. Spray seedling grass only after the five leaf stage, using 3/4 to 1 pint per acre to control small seedling weeds. After the grass is well established, higher rates of up to 4 pints can be used to control hard-to-kill annual or perennial weeds. For best results, do not use on bentgrass unless grass injury can be tolerated.

GRASSES: IN ESTABLISHED PASTURES AND RANGELANDS — Use 1 to 4 pints of HI-YIELD® 2,4-D AMINE NO. 4 in 1 to 30 gallons of water per acre. Use the light rate on more easily injured grasses. For small areas, use 3/4 to 1 fluid ounce (1 1/2 to 2 Tablespoons) per 1,000 per square feet; mix 1 to 3 gallons of water and apply uniformly over the area. Apply preferably when weeds are small and growing actively before the bud stage. Fall or Spring is the best time to treat. Repeated treatments may be needed for less susceptible weeds. Treatment will kill or injure Alfalfa, Sweet Clover and other Legumes. White Clover (including Ladino) may be injured by light application but recovers; repeated treatments will kill it. In some Dichondra, Bentgrasses, Carpet, Buffalo, and St. Augustine Grasses may be injured. Usually Colonial Bents are more tolerant than Creeping types; Velvets are most easily injured. Where Bentgrass predominates, make 2 applications of 1 pint per acre at 3 week intervals. For Pasture and Rangeland: Do not apply more than 8 pints (4.0 lbs. ae) per acre per year.
USE PRECAUTIONS FOR GRASSES IN
CONSERVATION RESERVE PROGRAM AREAS

Do not cut forage for hay within 7 days of application.

Postemergence:
• For susceptible annual and biennial broadleaf weeds, do not exceed 2 pints (1.0 lb. ae) per acre per application.
• For moderately susceptible biennial and perennial broadleaf weeds and for difficult to control weeds and woody plants, do not exceed 4 pints (2.0 lbs. ae) per acre per application.
• For spot treatments, do not exceed 4 pints (2.0 lbs. ae) per acre.
• The minimum retreatment interval is 30 days.

If grass is to be cut for hay, Agricultural Use Requirements for the Worker Protection Standard are applicable.

For program lands, such as Conservation Reserve Program, consult program rules to determine whether grass or hay may be used. The more restrictive requirements of the program rules or this label must be followed.

Bitterweed, Broomweed, Croton, Docks, Kochia, Marshelder, Musk Thistle and Other Broadleaf Weeds: Use 4 to 4.2 pints of this product in 10 to 30 gallons of water per acre. If weeds are young and growing actively, 2 pints per acre will provide control of some species. Deep-rooted Perennial Weeds may require repeated treatments in the same year or in subsequent years.

Weed Control in Newly Sprigged Coastal Bermudagrass: Apply 2 to 4.2 pints of this product in 20 to 100 gallons of water per acre pre-emergence and/or post emergence.

Wild Garlic and Wild Onion Control: Apply 4 to 4.2 pints of product per acre making three applications, Fall-Spring-Fall or Spring-Fall-Spring, starting in the late Fall or early Spring.

SOUTHERN WILD ROSE: Use a maximum of 4.2 pints of this product plus the recommended rate of a high quality agricultural surfactant per 100 gallons of water and spray thoroughly as soon as foliage is well developed. Two or more treatments may be required.

STONE FRUIT AND NUT ORCHARDS (Except in California): To control Annual Broadleaf Weeds on the orchard floor, apply 3 pints per acre using coarse sprays and low pressure in sufficient
volume of water to obtain thorough wetting of weeds. Treat when weeds are small and actively growing. Do not use on light, sandy soil.

NOTE: Do not apply (1) to bare ground as injury may result, (2) to newly established or young orchards. Trees must be at least 1 year old and in vigorous condition, (3) during bloom, (4) more than twice a year, (5) immediately before irrigation and withhold irrigation for 2 days before and 3 days after treatment. Also, do not allow spray to drift onto or contact foliage, fruit, stems, trunks of trees or exposed roots as injury may result. Do not graze or feed cover crops from treated orchards. Pre-harvest intervals: Do not harvest stone fruit within 40 days of application nor nuts within 60 days of application.

NO-TILL APPLICATION: HI-YIELD® 2,4-D AMINE NO. 4 may be used in the broadcast method with a normal boom or with direct pipes set 12 inches apart in 36 inch rows. When using this product, refer to specific rate directions for the individual crop sites. Maintain uniform pressure and speed when applying.

USE PRECAUTIONS FOR STONE FRUITS AND NUT ORCHARDS

The preharvest interval (PHI) is 60 days.

Do not cut orchard floor forage for hay within 7 days of application.

For filberts, apply a maximum of 2.1 pints (1.0 lb. ae) per 100 gallons of spray solution per application.

Post-emergence:
Limited to 2 applications per crop cycle.
Maximum of 4 pints of product per acre per application.
Minimum of 75 days between applications.

FOR USE IN CROP RESIDUE MANAGEMENT SYSTEMS
IN SOYBEANS (Preplant only)

GENERAL INFORMATION: HI-YIELD® 2,4-D AMINE NO. 4 is a herbicide that provides control of many emerged susceptible Annual and Perennial Broadleaf Weeds. HI-YIELD® 2,4-D AMINE NO. 4 may be applied prior to planting Soybeans to provide foliar burndown control of susceptible
Annual and Perennial Broadleaf Weeds and certain Broadleaf cover crops such as those listed on this label. HI-YIELD® 2,4-D AMINE NO. 4 should only be applied preplant to Soybeans in situations such as reduced tillage production systems, where emerged weeds are present. Apply only according to the application instructions given below. Do not use any tillage operations between application of HI-YIELD® 2,4-D AMINE NO. 4 and planting Soybeans.

**MIXING INSTRUCTIONS:** Compatible crop oil concentrates, agricultural surfactants and fluid fertilizers approved for use on growing crops may increase the herbicidal effectiveness of 2,4-D on certain weeds and may be added to the spray tank. Read and follow all directions and precautions on this label and on all labels of adjuvants or fertilizers mixed with this product.

**APPLICATION PROCEDURES:** Apply using air or ground equipment in sufficient gallonage to obtain adequate coverage of weeds. Use 2 or more gallons of water per acre in aerial equipment and 10 or more gallons of water per acre in ground equipment.

<table>

</tbody>
</table>

*These species are only partially controlled.
For best weed control at time of treatment, weeds should be small, actively growing and free of stress caused by extremes in climatic conditions, diseases, or insect damage. The response of individual weed species to HI-YIELD® 2,4-D AMINE NO. 4 is variable. Consult your Local County or State Agricultural Extension Service or Crop Consultant for advice.

APPLICATION RESTRICTIONS AND PRECAUTIONS FOR SOYBEAN: Important Notice- Unacceptable injury to Soybeans planted in fields treated with HI-YIELD® 2,4-D AMINE NO. 4 may occur. Whether or not Soybean injury occurs and the extent of the injury will depend on weather (temperature and rainfall) from herbicide application until soybean emergence and agronomic factors such as the amount of weed vegetation and previous crop residue present. Injury is more likely under cool, rainy conditions and where there is less weed vegetation and crop residue present.

Do not use on low organic sandy soils (<1.0%).

Do not apply HI-YIELD® 2,4-D AMINE NO. 4 when weather conditions such as temperature air inversions or wind favor drift from treated areas to susceptible plants.

Livestock Grazing Restriction: Do not feed hay, forage or fodder. Restrict livestock from grazing treated fields. Livestock should be restricted from feeding/graing of treated cover crops.

In fields treated with HI-YIELD® 2,4-D AMINE NO. 4, plant Soybean seed as deep as practical or at least 1.0 inch deep. Adjust the planter, if necessary, to ensure that planted seed is completely covered.

Do not apply HI-YIELD® 2,4-D AMINE NO. 4 prior to planting Soybeans if you are not prepared to accept the results of Soybean injury, including possible loss of stand and yield.

Do not replant fields treated with HI-YIELD® 2,4-D AMINE NO. 4 in the same growing season with crops other than those labeled for 2,4-D use.

For the 1 pint (0.5 lbs ae) per acre per application rate, do not apply more than 2 applications per crop cycle.

For the 2 pint (1.0 lbs ae) per acre per application rate, do not apply more than once per crop cycle. The maximum rate per crop cycle is 2.25 pints of product per acre.
SELECTIVE WEEDING IN NON-CROP AREAS

ORNAMENTAL TURF LAWNS: (Residential, Industrial and Institutional), Parks, Cemeteries, Athletic Fields and Golf Courses (Fairways, Aprons, Tees and Roughs), Sod Farms and similar turf areas. Use 2 to 4.2 pints of product per acre per application per site in 40 to 180 gallons of water to give good coverage to one acre on established stands of Perennial Grasses. Usually 4 pints per acre provides good weed control under average conditions. The maximum number of broadcast applications per treatment site is 2 per year. Treat when weeds are young and actively growing. Do not apply to newly seeded grasses until well established. Use higher rate for hard-to-kill weeds. Use higher rate when using higher volume of water per acre. Do not exceed specified application dosages for any area. Deep-rooted Perennial Weeds may require repeated spot treatments in the same season or in subsequent years. Avoid applying during excessively dry or hot periods unless irrigation (watering) is used before treatment. Do not apply if rainfall is expected within 48 hours, nor should lawns be irrigated for 48 hours following application. For optimum results, turf should not be mowed for 1 to 2 days before and after application. Reseed no sooner than 3 to 4 weeks after application of this product. Adding oil, wetting agent, or other surfactant to the spray may be used to increase effectiveness on weeds, but doing so may reduce selectivity to turf resulting in turf damage. Maximum kill of weeds will be obtained by applying in Spring and early Fall when weeds are actively growing. Do not use on golf greens nor on Dichondra or other Broadleaf Herbaceous Ground Covers. Do not use on Creeping Grasses such as Bent and St. Augustine except for spot treating, nor on newly seeded turf until grass is well established.

SPOT TREATMENT IN NON-CROP AREAS: To control Broadleaf Weeds in small areas with a hand sprayer, use 1/4 pint of HI-YIELD® 2,4-D AMINE NO. 4 in 3 gallons of water and spray to thoroughly wet all foliage.
USE PRECAUTIONS FOR ORNAMENTAL TURF LAWNS

golf courses, cemeteries, parks, sports fields, turfgrass, lawns and other grass areas

Post-emergence:
Limited to 2 applications per year.
Maximum of 3.25 pints of product per acre per application.
The maximum seasonal rate is 6.25 pints of product per acre, excluding spot treatments

GENERAL WEED CONTROL (Airfields, Roadsides, Vacant Lots, Drainage Ditchbanks, Fencerows, Industrial Sites, Rights-of-Way, Utility Power Lines, Railroads, and similar areas): Use 1/2 gallon of product per acre. Use sufficient gallonage for thorough and uniform coverage. Apply when most annual broadleaf weeds are still young and growing vigorously. Apply when perennial and biennial weeds are actively growing and near the bud stage, but before flowering. Thoroughly wet weeds when applying this mixture. For best results on Tansy ragwort and Musk thistle, treat in rosette stage, before bolting. Treat Wild onion or garlic in early Spring and in Fall when they are young and growing actively. The addition of a wetting agent (spray adjuvant) is suggested. Usually 4 pints per acre will give adequate control. Do not use on herbaceous ground covers or creeping grass such as Bent. Legumes will usually be damaged or killed. Deep-rooted perennials such as Bindweed, Whitetop, Perennial sowthistle, Blue lettuce, Nettle, Bur ragweed, Canada thistle and other noxious perennials somewhat resistant to 2,4-D may require repeat applications to kill. Do not use on freshly seeded turf until grass is well established. Delay re-seeding for 30 days. For chemical mowing applications on roadside and utility rights-of-way, using low volume spray equipment such as the “Lucas” 64 system use 1/2 gallon of this product in 1 to 5 gallons of water per acre.

CONTROL OF SOUTHERN WILD ROSE: On roadsides and fencerows, use 1/2 gallon of this product plus the recommended rate of a high quality surfactant per 100 gallons of water and spray thoroughly as soon as foliage is well developed. Two or more treatments may be required.
USE PRECAUTIONS FOR GENERAL WEED CONTROL

(airfields, roadsides, vacant lots, drainage ditchbanks, fencerows, industrial sites,
rights-of-way, utility power lines, railroads, and similar areas)

Post-emergence (annual and perennial weeds):
Limited to 2 applications per year.
Maximum of 4.25 pints of product per acre per application.
Minimum of 30 days between applications.

Post-emergence (woody plants):
Limited to 1 application per year.
Maximum of 8.25 pints of product per acre per year.

Ditchbank: For shoreline weeds, allow no more than 2 foot overspray onto water.
Applications to non-cropland areas are not applicable to treatment of commercial timber or
other plants being grown for sale or other commercial use, or for commercial seed production,
or for research purposes.

BRUSH CONTROL

WOODY PLANT CONTROL: To control Woody Plants susceptible to 2,4-D such as Alder, Buck-
brush, Elderberry, Sumac, Cherokee Rose, Japanese Honeysuckle, Virginia Creeper, Wild Grape
and Willow on non-cropland areas such as rights-of-way, fence rows, roadsides and along ditchbanks,
use 2 to 3 quarts of product per acre in 30 to 100 gallons of water. Lower volume of water can be
used unless applying through such equipment as Directa-Spra, Wobbler, Mini Wobbler, or Spirometer.
Spray brush 5 to 8 feet tall after spring foliage is well developed. Wet all parts of the plants
thoroughly, including stem and foliage, to the point of runoff. Higher volumes of up to 300 to 500
gallons of spray per acre may be necessary where the brush is very dense and over 6 to 8 feet
high. Spraying can be effective at any time up to 3 weeks before frost as long as soil moisture is
sufficient for active growth of the brush. Control will be less effective in mid-Summer during hot,
dry weather when soil moisture is deficient and plants are not actively growing. A wetting agent
may be added to the spray if needed for increased effectiveness. Hard-to-control species may
require re-treatment next season. In general, it is better to cut tall woody plants and spray sucker growth when 2 to 4 feet tall.

**SAND SHINNERY OAK AND SAND SAGEBRUSH:** On the oak, use 2-1/4 pints of this product in 5 gallons of water per acre. Apply by aircraft between May 15 and June 15. On the sagebrush, use 2-1/4 pints in 3 gallons of water per acre and apply by aircraft when foliage is fully expanded and the brush is actively growing.

**BIG SAGEBRUSH AND RABBITBRUSH:** Use 2-1/4 to 6-3/4 pints in 2 to 3 gallons of water. For rabbitbrush, the 6-3/4 pints rate is usually required. Brush should be leaved out and growing actively when treated. Retreatment may be needed. Chamise, Manzanita, Buckbrush, Coastal Sage, Coyotebrush and certain other Chaparral Species: Use 2-1/4 to 6-3/4 pints per acre in 5 to 10 gallons of water. Make applications by aircraft or ground equipment to obtain uniform spray coverage. For effective control, the brush must be fully leaved out and growing actively when sprayed. Retreatment may be needed. Consult State or local brush control specialists for most effective rate, volume and timing of spray application.

**CATTAILS, TULE (BULBRUSH), AND OTHER RUSHES:** Mix 4 pints of this product and 100 gallons of water (1-1/2 to 2-1/2 quarts of this product in 400 to 800 gallons of spray per acre). Addition of a wetting agent may be advisable. Apply in the spring during flower head emergence. Spray to wet all foliage. Re-spray if needed when regrowth is 3 to 5 feet tall.

### AQUATIC APPLICATIONS

**WEEDS AND BRUSH ON IRRIGATION CANAL DITCHBANKS — SEVENTEEN WESTERN STATES:** Arizona, California, Colorado, Idaho, Kansas, Montana, Nebraska, New Mexico, Nevada, North Dakota, Oklahoma, Oregon, South Dakota, Texas, Utah, Washington and Wyoming. For control of Annual and Perennial Broadleaf Weeds, apply 1 to 2 quarts of HI-YIELD® 2,4-D AMINE NO. 4 per acre in approximately 20 to 100 gallons of water per acre. Treat when weeds are young and actively growing before the bud or early bloom stage. For harder-to-control weeds, a repeat spray after 3 to 4 weeks using the same rates may be needed for maximum results. Apply no more than two treatments per season. For Woody Brush and patches of Perennial Broadleaf Weeds, mix 1 gallon of this product in 150 gallons of water. Wet foliage thoroughly using about 1 gallon of solution per...
square rod. Spraying instruction: Apply with low pressure (10 to 40 psi) power spray equipment mounted on truck, tractor or boat. Apply while traveling upstream to avoid accidental concentration of chemical into water. Spray when the air is fairly calm; 5 mph or less. Do not use on small canals (less than 10 cfs) where water will be used for drinking purposes. Boom spraying onto water surfaces must be held to a minimum and no cross-stream spraying to opposite banks should be permitted. When spraying shoreline weeds, allow no more than two-foot overspray onto water with an average of less than one-foot overspray to prevent introduction of greater than negligible amounts of chemical into the water. Water within treated banks should not be fished.

**USE PRECAUTIONS FOR AQUATIC APPLICATIONS**

**WEEDS AND BRUSH ON IRRIGATION CANAL DITCHBANKS SUCH AS WATER HYACINTH**

Post-emergence:
Limited to 2 applications per season.
Maximum of 4 pints of product per acre per application.
Minimum of 30 days between applications.
Spot treatment permitted.
Do not use on small canals with a flow rate less than 10 cubic feet per second (CFS) where water will be used for drinking purposes, CFS may be estimated by using the formula below. The approximate velocity needed for the calculation can be determined by observing the length of time that it takes a floating object to travel a defined distance. Divide the distance (ft.) by the time (sec.) to estimate velocity (ft. per sec.). Repeat 3 times and use the average to calculate CFS.
Average Width (ft.) x Average Depth (ft.) x Average Velocity (ft. per sec.) = CFS

For ditchbank weeds:
Do not allow boom spray to be directed onto water surface.
Do not spray across stream to opposite bank.

**FOR AQUATIC WEEDS SUCH AS WATER HYACINTH IN WATERS THAT ARE QUIESCENT OR SLOW MOVING (LAKES, PONDS, RESERVOIRS, CANALS, RIVERS, BAYOUS, STREAMS, DRAINAGE DITCHES, MARSHES, ETC.):** Consult your State Game and Fish Department or Water Control Agency prior to application of this product for aquatic weed control.
USE PRECAUTIONS FOR FLOATING AND EMERGENT WEEDS
SUCH AS WATER HYACINTH

Maximum of 4 quarts of product per surface acre per application. Limited to 2 applications per season.
Minimum of 21 days between applications.
Spot treatments are permitted.
Apply to emergent aquatic weeds in ponds, lakes, reservoirs, marshes, bayous, drainage ditches, non-irrigation canals, rivers, and streams that are quiescent or slow moving.

WATER USE

1. Water for irrigation or sprays:
   A. If treated water is intended to be used only for crops or non-crop areas that are labeled for direct treatment with 2,4-D such as pastures, turf, or cereal grains, the treated water may be used to irrigate and/or mix sprays for these sites at anytime after the 2,4-D aquatic application.
   B. Due to potential phytotoxicity considerations, the following restrictions are applicable: If treated water is intended to be used to irrigate or mix sprays for plants grown in commercial nurseries and greenhouses; and other plants or crops that are not labeled for direct treatment with 2,4-D, the water must not be used unless one of the following restrictions has been observed:
      i. A setback distance from functional water intake(s) of greater than or equal to 600 ft. was used for the application, or,
      ii. A waiting period of 7 days from the time of application has elapsed, or,
      iii. An approved assay indicates that the 2,4-D concentration is 100 ppb (0.1 ppm) or less at the water intake. Wait at least 3 days after application before initial sampling at water intake.

2. Drinking water (potable water):
   A. Consult with appropriate state or local water authorities before applying this product to public waters. State or local agencies may require permits. The potable water use restrictions on this label are to ensure that consumption of water by the public is allowed only when the
concentration of 2,4-D in the water is less than the MCL (Maximum Contaminant Level) of 70 ppb. Applicators should consider the unique characteristics of the treated waters to assure that 2,4-D concentrations in potable water do not exceed 70 ppb at the time of consumption.
B. For floating and emergent weed applications, the drinking water setback distance from functioning potable water intakes is greater than or equal to 600 ft.
C. If no setback distance of greater than or equal to 600 ft. is used for application, applicators or the authorizing organization must provide a drinking water notification prior to a 2,4-D application to the party responsible for public water supply or to individual private water uses. Notification to the party responsible for a public water supply or to individual private water users must be done in a manner to assure that the party is aware of the water use restrictions when this product is applied to potable water. The following is an example of a notification via posting, but other methods of notification which convey the above restrictions may be used and may be required in some cases under State or local law or as a condition of a permit.

Example: Posting notification should be located every 250 feet including the shoreline of the treated area and up to 250 feet of shoreline past the application site to include immediate public access points. Posting must include the day and time of application. Posting may be removed if analysis of a sample collected at the intake 3 or more days following application shows that the concentration in the water is less than 70 ppb (100 ppb for irrigation or sprays), or after 7 days following application, whichever occurs first.

Text of notification: Wait 7 days before diverting functioning surface water intakes from the treated aquatic site to use as drinking water, irrigation, or sprays, unless water at functioning drinking water intakes is tested at least 3 days after application and is demonstrated by assay to contain not more than 70 ppb 2,4-D (100 ppb for irrigation or sprays).

Application Date: _____ Time: _____

D. Following each application of this product, treated water must not be used for drinking water unless one of the following restrictions has been observed:
   i. A setback distance from functional water intake(s) of greater than or equal to 600 ft.
was used for the application, or

ii. A waiting period of 7 days from the time of application has elapsed, or

iii. An approved assay indicates that the 2,4-D concentration is 70 ppb (0.07 ppm) or less at the water intake. Sampling for drinking water analysis should occur no sooner than 3 days after 2,4-D application. Analysis of samples must be completed by a laboratory that is certified under the Safe Drinking Water Act to perform drinking water analysis using a currently approved version of analytical Method Number 515, 555, other methods for 2,4-D as may be listed in Title 40 CFR, Part 141.24, or Method Number 4015 (immunoassay of 2,4-D) from U.S. EPA Test Methods for Evaluating Solid Waste SW-846.

E. Note: Existing potable water intakes that are no longer in use, such as those replaced by a connection to a municipal water system or a potable water well, are not considered to be functioning potable water intakes.

F. Drinking water setback distances do not apply to terrestrial applications of 2,4-D adjacent to water bodies with potable water intakes.

3. Except as stated above, there are no restrictions on using water from treated areas for swimming, fishing, watering livestock or domestic purposes.

Coordination and approval of local and state authorities may be required, either by letter of agreement or issuance of special permits for aquatic applications.

**AQUATIC APPLICATION RESTRICTIONS:** Fish Toxicity: Oxygen Ratio - Fish breathe oxygen in the water and a water-oxygen ratio must be maintained. Decaying weeds use up oxygen. To avoid fish kill from decaying plant material treat 1/3 to 1/2 of the water area in a single operation and wait at least 10 to 14 days between treatments. Begin treatments along the shore and proceed outwards in bands to allow fish to move into untreated areas. For large bodies of weed infested waters, leave buffer strips of a least 100 feet wide and delay treatment of these strips for 4 to 5 weeks or until the dead vegetation has decomposed. Repeat as necessary to kill regrowth and plants missed in previous application.

**WIND VELOCITY:** Ground or Surface Application - Do not apply when wind speeds are at or above 10 mph. Air Application - Do not apply when wind speeds are at or above 5 mph. The restrictions do not apply to subsurface applications used in weed control programs.
AERIAL APPLICATION – Use 1 gallon of HI-YIELD® 2,4-D AMINE NO. 4 in 5 to 15 gallons of water to cover one surface acre. Use drift control spray equipment or thickening agents mixed into the spray solution. Apply through standard boom systems with a minimum of 5 gallons of spray mix per acre. Surface Application – Use 2 to 4 quarts of this product in 50 to 100 gallons of water per acre. Uniform coverage is essential. Avoid submerging plants after treatment. Application should be made when leaves are fully developed above water line and plants are actively growing. Use power sprayers operated with a boom or spray gun mounted on a boat, tractor or truck. Thorough wetting of foliage is essential for maximum control. Special precautions such as the use of low pressure, large nozzles and thickening agents should be taken to avoid spray drift in areas of sensitive crops. For DIRECTA-SPRA™ operation, use this product with 1 pint of drift control agent in 50 to 100 gallons of water. For other applications, follow the drift control agent label for mixing directions.

WATER HYACINTH (Eichornia crassipes) CONTROL:
To be applied by Federal, state or local public agency personnel, trained in aquatic weed control, or by licensed commercial applicators under contract to the above agencies; and application to any aquatic use site by commercial applicators rather than the government Agency will require written approval by the Federal, State or local Agency overseeing the aquatic weed eradication effort. For use in ponds, lakes, reservoirs, marshes, bayous, drainage ditches, canals, rivers and streams that are quiescent or slow moving. Do not apply to estuarial or brackish water or areas where crayfish farming is performed; not within 1500 feet of potable or irrigation water intakes. Note: Make treatment of moving bodies of water while traveling upstream to prevent concentration of the product in water. This product will control water hyacinth with surface and air applications. Please read above sections on Fish Toxicity, Wind Velocity, Irrigation and Potable Water before applying this product.

AMOUNTS TO USE - 2 to 4 qts. of this product per acre. Spray the weed mass only. Use 4 qts. of this product when plants are matured or when the weed mass is dense.

WHEN TO APPLY - Spray when water hyacinth plants are actively growing. Repeat to kill re-growth and hyacinth plants missed in the previous operation. The maximum application rate including reapplication over a 30 day period must not exceed 4 lbs. acid/acre.
HOW TO USE - Surface Application - Use power Sprayers operated with a boom or spray gun mounted on a boat, tractor or truck. Thorough wetting of foliage is essential for maximum control. Use 100 to 400 gal./A of spray mixture. Special precaution such as the use of low pressure, large nozzles and thickening agents should be taken to avoid spray drift in areas of sensitive crops. For Directa-Spray® operation use this product with 1 pint of Lo-Drift™ in 50 to 100 gallons of water. For other applications follow the Lo-Drift™ label for mixing directions.

AIR APPLICATION - Use drift control spray equipment or thickening agents such as Lo-Drift™ mixed into the spray solution. Apply 1.0 gallons per acre of this product through standard boom systems with a minimum of 5 gallons of spray mix per acre. For Microfoil® drift control spray systems apply this product in 12 to 15 gallons spray mix per acre.

EURASIAN WATER MILFOIL (Myriophyllum spicatum) CONTROL:
To be applied by Federal, state or local public agency personnel, trained in aquatic weed control, which includes Eurasian Water Milfoil programs conducted by the Tennessee Valley Authority in dams and reservoirs of the TVA system; or by licensed commercial applicators under contract to the above agencies; and application to any aquatic use site by commercial applicators rather than the government Agency will require written approval by the Federal, State or local Agency overseeing the aquatic weed eradication effort.

APPLICATION INSTRUCTIONS
This product will control water milfoil with surface, subsurface and air applications. Do not apply to estuarial or brackish waters or areas where crayfish farming is performed; nor within 1500 feet of potable or irrigation water intakes. Please read above sections on Fish Toxicity, Wind Velocity, Irrigation and Potable Water before applying this product.

How to Use - To control water milfoil when less than 5 gallons of concentrate per acre is recommended, dilute the concentrate with water to apply a minimum of 5 gallons of spray mix per acre. Shoreline areas should be treated by subsurface injection applied by boat to avoid aerial drift. Do not apply when weather conditions favor drift from target area. Do not contaminate water when disposing of equipment washwaters.
Open Water Areas - To reduce contamination and prevent undue exposure to fish and other aquatic organisms, do not treat water areas that are not infested with aquatic weeds.
Amount to Use - Apply 2.5 to 10 gallons of concentrate per acre. The higher rate is used in areas of greater water exchange. These areas may require a repeat application.
When to Apply - For best results, apply in Spring or early Summer when milfoil starts to grow. This timing can be checked by sampling the lake bottom in areas heavily infested with weeds the year before.
Subsurface Application - Apply 2.5 to 10 gallons of this product per acre as a concentrate directly into the water through boatmounted distribution systems.
Surface Application - Apply 2.5 to 10 gallons of this product per acre minimum spray volume 5 gallons mix per acre.
Air Application - Use drift control spray equipment or thickening agents such as Lo-Drift™ mixed into the spray solution. Apply 2.5 to 10 gallons per acre of this product through standard boom systems with a minimum of 5 gallons of spray mix per acre. For Microfoil® drift control spray systems, apply 12 to 15 gallons mix per acre.

<table>
<thead>
<tr>
<th>Surface Area</th>

*Examples include spot treatment of pioneer colonies of Eurasian Water Milfoil and certain difficult to control aquatic species.
Submersed Weeds SUCH AS EURASIAN WATER MILFOIL (1 gallon of product contains 3.8 pounds of 2,4-D acid equivalent)
Maximum of 10.8 lbs ae/per acre-foot per application.
Limited to 2 applications per season.
Apply to aquatic weeds in ponds, lakes, reservoirs, marshes, bayous, drainage ditches, non-irrigation canals, rivers, and streams that are quiescent or slow moving.
Do not apply within 21 days of previous application.
When treating moving bodies of water, applications must be made while traveling upstream to prevent concentration of 2,4-D downstream from the application.
Coordination and approval of local and state authorities may be required, either by letter of agreement or issuance of special permits for such use.

WATER USE
1. Water for irrigation or sprays:
   A. If treated water is intended to be used only for crops or non-crop areas that are labeled for direct treatment with 2,4-D such as pastures, turf, or cereal grains, the treated water may be used to irrigate and/or mix sprays for these sites at anytime after the 2,4-D aquatic application.
   B. Due to potential phytotoxicity and/or residue considerations, the following restrictions are applicable:
      If treated water is intended to be used to irrigate or mix sprays for unlabeled crops, noncrop areas or other plants not labeled for direct treatment with 2,4-D, the water must not be used unless one of the following restrictions has been observed:
      i. A setback distance described in the Drinking Water Setback Table was used for the application, or,
      ii. A waiting period of 21 days from the time of application has elapsed, or,
      iii. An approved assay indicates that the 2,4-D concentration is 100 ppb (0.1 ppm) or less at the water intake. See Table 3 for the waiting period after application but before taking the initial sampling at water intake.

2. Drinking water (potable water):
A. Consult with appropriate state or local water authorities before applying this product to public waters. State or local agencies may require permits. The potable water use restrictions on this label are to ensure that consumption of water by the public is allowed only when the concentration of 2,4-D in the water is less than the MCL (Maximum Contaminant Level) of 70 ppb. Applicators should consider the unique characteristics of the treated waters to assure that 2,4-D concentrations in potable water do not exceed 70 ppb at the time of consumption.

B. For submerged weed applications, the drinking water setback distances from functioning potable water intakes are provided in Table 2. Drinking Water Setback Distance (below).

C. If no setback distance from the Drinking Water Setback Distance Table (Table 2) is to be used for the application, applicators or the authorizing organization must provide a drinking water notification and an advisory to shut off all potable water intakes prior to a 2,4-D application. Notification to the party responsible for a public water supply or to individual private water users must be done in a manner to assure that the party is aware of the water use restrictions when this product is applied to potable water. The following is an example of a notification via posting, but other methods of notification which convey the above restrictions may be used and may be required in some cases under State or local law or as a condition of a permit.

Example: Posting notification should be located every 250 feet including the shoreline of the treated area and up to 250 feet of shoreline past the application site to include immediate public access points. Posting should include the day and time of application. Posting may be removed if analysis of a sample collected at the intake no sooner than stated in Table 3 (below) shows that the concentration in the water is less than 70 ppb (100 ppb for irrigation or sprays), or after 21 days following application, whichever occurs first.

Text of notification: Wait 21 days before diverting functioning surface water intakes from the treated aquatic site to use as drinking water, irrigation, or sprays, unless water at functioning drinking water intakes is tested no sooner than (insert days from Table 3) and is demonstrated by assay to contain not more than 70 ppb, 2,4-D (100 ppb for irrigation or sprays).

Application Date: _____ Time: _____.
D. Following each application of this product, treated water must not be used for drinking water unless one of the following restrictions has been observed:

i. A setback distance described in the Drinking Water Setback Distance Table was used for the application, or

ii. A waiting period of at least 21 days from the time of application has elapsed, or,

iii. An approved assay indicates that the 2,4-D concentration is 70 ppb (0.07 ppm) or less at the water intake. Sampling for drinking water analysis should occur no sooner than stated in Table 3. Analysis of samples must be completed by a laboratory that is certified under the Safe Drinking Water Act to perform drinking water analysis using a currently approved version of analytical Method Number 515, 555, other methods for 2,4-D as may be listed in Title 40 CFR, Part 141.24, or Method Number 4015 (immunoassay of 2,4-D) from U.S. EPA Test Methods for Evaluating Solid Waste SW-846.

E. Note: Existing potable water intakes that are no longer in use, such as those replaced by a connection to a municipal water system or a potable water well, are not considered to be functioning potable water intakes.

F. Drinking water setback distances do not apply to terrestrial applications of 2,4-D adjacent to water bodies with potable water intakes.

3. Except as stated above, there are no restrictions on using water from treated areas for swimming, fishing, watering livestock or domestic purposes.

This product will either kill, control or suppress the weeds listed in the label booklet for this product. Some of these species may require repeat spot applications even under ideal conditions.

**STORAGE AND DISPOSAL**

Do not contaminate water, food or feed by storage or disposal.

**PESTICIDE STORAGE:** Always store pesticides in a secured warehouse or storage building. Store at temperatures above 32°F. If allowed to freeze, rework to 40°F, remix thoroughly before using. This does not alter this product. Containers should be opened in well-ventilated areas. Keep container tightly sealed when not in use. Do not stack cardboard cases more than two pallets high. Do not store near open containers of fertilizer, seed or other pesticides.

**PESTICIDE DISPOSAL:** Pesticide wastes are toxic. If container is damaged or if pesticide has leaked, contain all spillage. Absorb and clean up all spilled material with granules or sand. Place in a closed, labeled container for proper disposal. Improper disposal of excess pesticide, spray mixtures, or rinsates is a violation of Federal law and may contaminate ground water. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste Representative at the nearest EPA regional office for guidance.
CONTAINER DISPOSAL: Non refillable container. Do not reuse or refill this container. Offer for recycling if available. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by other procedures approved by State and local authorities. Plastic containers are also disposable by incineration, or, if allowed by State and local authorities, by burning. If burned stay out of smoke.

WARRANTY DISCLAIMER
The directions for use of this product must be followed carefully. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, (1) THE GOODS DELIVERED TO YOU ARE FURNISHED “AS IS” BY MANUFACTURER OR SELLER AND (2) MANUFACTURER AND SELLER MAKE NO WARRANTIES, GUARANTEES, OR REPRESENTATIONS OF ANY KIND TO BUYER OR USER, EITHER EXPRESS OR IMPLIED, OR BY USAGE OF TRADE, STATUTORY OR OTHERWISE, WITH REGARD TO THE PRODUCT SOLD, INCLUDING, BUT NOT LIMITED TO MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, USE, OR ELIGIBILITY OF THE PRODUCT FOR ANY PARTICULAR TRADE USAGE. UNINTENDED CONSEQUENCES, INCLUDING BUT NOT LIMITED TO INEFFECTIVENESS, MAY RESULT BECAUSE OF OTHER MATERIALS USED IN COMBINATION WITH THE GOODS, OR THE MANNER OF USE OR APPLICATION, INCLUDING WEATHER, ALL OF WHICH ARE BEYOND THE CONTROL OF MANUFACTURER OR SELLER AND ASSUMED BY BUYER OR USER. THIS WRITING CONTAINS ALL OF THE REPRESENTATIONS AND AGREEMENTS BETWEEN BUYER, MANUFACTURER AND SELLER, AND NO PERSON OR AGENT OF MANUFACTURER OR SELLER HAS ANY AUTHORITY TO MAKE ANY REPRESENTATION OR WARRANTY OR AGREEMENT RELATING IN ANY WAY TO THESE GOODS.
LIMITATION OF LIABILITY

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, IN NO EVENT SHALL MANUFACTURER OR SELLER BE LIABLE FOR SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, OR FOR DAMAGES IN THEIR NATURE OF PENALTIES RELATING TO THE GOODS SOLD, INCLUDING USE, APPLICATION, HANDLING, AND DISPOSAL. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, MANUFACTURER OR SELLER SHALL NOT BE LIABLE TO BUYER OR USER BY WAY OF INDEMNIFICATION TO BUYER OR TO CUSTOMERS OF BUYER, IF ANY, OR FOR ANY DAMAGES OR SUMS OF MONEY, CLAIMS OR DEMANDS WHATSOEVER, RESULTING FROM OR BY REASON OF, OR RISING OUT OF THE MISUSE, OR FAILURE TO FOLLOW LABEL WARNINGS OR INSTRUCTIONS FOR USE, OF THE GOODS SOLD BY MANUFACTURER OR SELLER TO BUYER. ALL SUCH RISKS SHALL BE ASSUMED BY THE BUYER, USER, OR ITS CUSTOMERS. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, BUYER'S OR USER'S EXCLUSIVE REMEDY, AND MANUFACTURER'S OR SELLER'S TOTAL LIABILITY SHALL BE FOR DAMAGES NOT EXCEEDING THE COST OF THE PRODUCT.

If you do not agree with or do not accept any of directions for use, the warranty disclaimers, or limitations on liability, do not use the product, and return it unopened to the Seller, and the purchase price will be refunded.
