MAXFORD® PROFESSIONAL INSECT CONTROL®roach Killer Bait Gel
ROACH KILLER BAIT GEL (TRIPLE)

FOR USE IN COMMERCIAL, INDUSTRIAL AND RESIDENTIAL AREAS

Hydramethylnon: tetrahydro-5, 5-dimethyl-(1H)-pyrimidinone, (3-(4-(trifluoromethyl)phenyl)-1-(2-(4-(trifluoromethyl)phenyl) ethyl)-2-propenyliden) hydroazone.................................2.15%
Inert Ingredients: ..................................................................97.85%
TOTAL: ................................................................................100.00%

CONTAINS: 4 pre-filled plastic dispensers

CAUTION: KEEP OUT OF REACH OF CHILDREN

USE ONLY IN AREAS NOT EASILY ACCESSIBLE TO CHILDREN AND PETS.

Products may stain textiles and clothing.

FIRST AID

IF SWALLOWED: - Call a Poison control Center or doctor immediately for treatment advice.
- Have person sip a glass of water if able to swallow.
- Do not induce vomiting unless told to do so by a Poison control Center or doctor.

IF ON SKIN: - Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15-20 minutes.
- Call a Poison control center or doctor for treatment advice.

IF IN EYES: - Hold eye open and rinse slowly and gently with plenty of water for 15-20 minutes. Remove contact lens, if present, after the first 5 minutes, then continue rinsing.
- Call a Poison control center or doctor for treatment advice.

Have the product container or label with you when calling a Poison control center or doctor or going for treatment. You may also contact 1-800-334-5777 for emergency.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION

Harsh if swallowed or absorbed through skin. Causes moderate eye irritation. Avoid contact with eyes, skin or clothing.

Personal Protective Equipment (PPE)

Applicants and handlers must wear:
- Long-sleeved shirt and long pants
- Chemical-resistant gloves (such as rubber or waterproof)
- Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for Washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

User Safety Recommendations

User should wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet. User should remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing. User should remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

STORAGE: Store in original container in a cool, dry area (out of reach of children). Keep container closed when not in use. Avoid contamination with other insecticides.

DISPOSAL: If empty: Do not reuse this container. Place in trash or offer for recycling if available. If partly filled: Call your local solid waste agency or 1-800-CLEANUP for disposal instructions. Never pour unused products down any indoor or outdoor drain.

GENERAL INFORMATION

General Precautions and Restrictions

MAXFORD® Professional Insect Control Roach Killer Bait Gel may be used as a spot or crack and crevice treatment for the indoor and outdoor control of cockroaches in residential areas and the core-below-the-fascia of institutions, warehousing and commercial establishments, including warehouses, restaurants, food processing plants, supermarkets, hospitals, nursing homes, motels, hotels, schools, laboratories, computer facilties, stores, restaurants, offices, banks, hospitals, trains, pet shops and zoos. Non-food-handling areas are such as garbage rooms, floor drains, floors (for storage), attics, and vestibules, offices, locker rooms, machine rooms, boiler rooms, garages, mop closets and storage areas (other than food-handling areas) of food-handling establishments as outlined below.

APPLICATION INSTRUCTIONS

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

Applications in Food-Handling Establishments: Application within food-feeding areas of food-handling establishments is limited to crack and crevice treatment only. Apply with MAXFORD® Bait injector directly into cracks and crevices. Place applicator (1/2 inch wide) into cracks, crevices, crevellar and small spaces not accessible to sprayers, where roaches are a problem. Apply small amounts of gel (up to 1/4 gram) per spot. Do not apply bait to areas where food feed, food clerks or food preparation surfaces may become contaminated. Do not apply bait to areas that are overly washed such as cracks and crevices in tables, food preparation and prepared food holding surfaces at table may be removed by washing. Do not apply bait to areas when the temperature exceeds 130°F as bait may fail. Examples include, but are not limited to, portions of ovens, sinks, grills, food service areas, utensils, and equipment, where cockroaches hide. During follow-up visits inspect bait placements and modify when necessary. Application of this product in food-feeding areas of food-handling establishments other than crack and crevice treatment is not permitted.

Applications in Food-feeding Areas: Do not apply bait gel areas which have been recently sprayed with insecticides, and do not sprays insecticide over gel as it may cause the bait to become repellent.

USDA: Authorized by USDA for use in Federally inspected meat, poultry, and shell egg grading plants. Approved P2: Residual pesticides.

MAXFORD® Gel is packaged in a plastic dispenser containing 2.1 oz (60 g) of bait. Application rate is dependent on level of infestation and species to be controlled. Bait can be applied as spots or as a bead in cracks and crevices. The lower application rate should be used for low to moderate infestations or re-treatments and the higher rate for more severe infestations or in areas where the population occurs in inaccessible areas, such as in wall. Bait placements should be at or near harborage or aggregation areas, such as corners, areas of movement or cracks and crevices. Numerous smaller placements will provide faster control than fewer larger spots, especially for German cockroach control.

For storage: Place in areas adjacent to structures where roaches may rest or breed. Place bait at appropriate points of entry areas, such as corners, cracks, and expansions. Apply bait in areas whenever possible. Environmental stresses such as direct sunlight and water will reduce the residual effects.

Priority treatment areas may be identified by visual inspection of such areas listed above or aided by tapping technique or spot flushing.

Refrigeration of Food: The product may be stored in the refrigerator if food-feeding areas are not to be refrigerated and/or the bait is not to be exposed to temperatures above 70°F.

For best results, place stations near air-conditioning units, water fountains, foundation vents and weep holes, ducts, utility entrances (e.g., electrical cable TV) and wherever cockroaches are frequently found. Regularly inspect at stations and replace bait as needed for continual control.

Position Refillable Bait Stations in areas where they will not be damaged by down equipment such as mowers and mowers. When placing the station in turf remove dirt and leaf and place station base plate against the soil.

If the station is not equipped to a brush by the identification, apply a sticker to the outside or inside of the station.

Directions for loading reservoirs and operation: On the underside of the drive rod, place the arrow facing up. Pull the drive rod out as far as it will go. Attach a fresh-filled reservoir of MAXFORD® Gel to the Bait Injector with a twist-locking movement. Remove the reservoir filled cap and attach the dispensing tip. Push down on the drive rod until the drive rod plunger engages with the piston in the reservoir of gel. Turn drive rod into stop until the drive rod is seating down and engaging drive rod mechanism (arrow down). Gently squeeze the trigger until the gel flows out. The bait will adhere to non-porous or non-living surfaces and will remain viable and available to cockroaches as long as it is visibly present. Reservoirs are no longer visibly present, according to the remaining level of infestation, which is generally a lower rate than the initial treatment. A visual inspection of bait placement is recommended 1 month after the initial treatment. Reservoirs should be placed close to the bait site is visible.

Do not use this product or on electrical equipment or win a possibility of shock hazards.

Differences in freezing reservoirs: With the arrow on the drive rod pointing upward as far as it will go. Remove the empty reservoir, wrap, and place in trash can. Reservoirs that contain gel can be sealed with the or standard spot to suit for future use. To attach a new reservoir follow the above directions.

Contains 3 pre-filled plastic dispensers

TOTAL NET WEIGHT: 6.3 oz. (180 g)
