FIFRA Section 24(c) Special Local Need Label

FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF OREGON

Aliette® WDG Fungicide

For Aerial Application on Hops for Downy Mildew Control

EPA Reg. No. 264-516
SLN. No. OR-040018

THIS LABEL IS VALID UNTIL DECEMBER 31, 2025 OR UNTIL OTHERWISE AMENDED, WITHDRAWN, CANCELED, OR SUSPENDED.

ACTIVE INGREDIENT: Aluminum tris (O-ethyl phosphonate) ................................................................. 80.0%
INERT INGREDIENTS: .......................................................................................................................... 20.0%
TOTAL: .................................................................................................................................................. 100.0%

KEEP OUT OF REACH OF CHILDREN
WARNING

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)

ENVIRONMENTAL HAZARDS

This product is toxic to aquatic and estuarine invertebrates. Drift and runoff may be hazardous to aquatic and estuarine organisms in neighboring areas. Do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwaters.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. This Section 24(c) label and the main EPA-registered label for this product must be in the possession of the user at the time of pesticide application. Read the label affixed to the container for Aliette® WDG Fungicide and this Section 24(c) label before applying. Follow all applicable directions, restrictions, precautions, and Worker Protection Standard requirements on the main EPA-registered label and on this Section 24(c) label.

When to Apply:

Apply Aliette® WDG Fungicide as a foliar spray. When conditions are favorable for disease development (warm and humid), applications should be made as follows: (1) when shoots are 6-12 inches high; (2) after training when vines are 5-6 feet tall; (3) approximately three weeks after the second application; and (4) during bloom. Aerial application may result in reduced control due to lack of canopy penetration and coverage. It should only be used in situations where ground application is impossible.

Restrictions and Limitations:

Do not apply within 24 days of harvest (PHI = 24 Days).

Do not apply more than 10 lbs/Acre per growing season.

Do not feed hop refuse to animals.

Note: Bayer CropScience has determined that phytotoxicity from solubilized copper may occur if products containing copper are tank-mixed with Aliette WDG Fungicide or if unbuffered Aliette WDG Fungicide is applied to foliage with copper residues. Do not tank-mix with copper fungicides.

When applied prior to or after copper fungicides, the pH of Aliette WDG Fungicide should be raised to 6.0 or above with the addition of an alkaline buffer such as Potassium Carbonate (3 lbs Potassium Carbonate to 5 lbs Aliette WDG Fungicide) or DiAmmonium Phosphate (5 lbs DiAmmonium Phosphate to 5 lbs Aliette WDG Fungicide).

Adjuvants which enhance pesticide penetration may cause phytotoxicity when mixed with Aliette® WDG. Mixing Aliette WDG Fungicide with surfactants or foliar fertilizers is not recommended. When Aliette WDG Fungicide is used in combination with any other pesticide, conduct a crop sensitivity test by spraying a few plants. Evaluate the sprayed plants 3-7 days after application for adverse effects.
