INSECTICIDE IN WATER SOLUBLE PACKETS

See full list of First Aid Instructions and Local Contact Information for more details on Disposal and Structures for Use.

For use by individuals/farmers licensed or registered by the state to apply termiticide products. States may have more restrictive requirements regarding qualifications of persons using this product. Consult the structural pest control regulatory agency of your state before purchase of this product.

For prevention or control of subterranean termites, drywood termites, dampwood termites, carpenter ants, and other wood-destroying insects.

DIRECTIONS FOR USE

STANDARD TREATMENT OPTIONS

First Aid

3. Keep the WSP(s) in outer packaging until just before use.

For prevention or control of subterranean termites, drywood termites, dampwood termites, carpenter ants, and other wood-destroying insects.

For shallow foundations, one foot or less in depth, dig a narrow trench approximately 6 inches wide and deep along the outside and inside of the foundation walls. Apply the solution so it will reach the footing by injecting into the lower areas of the wall, just above the floor or footing. When treating structures below 4 feet, apply the termiticide so that the chemical will reach the soil down to at least 12 inches. Make sure that the solution will reach the bottom of the footing. When treating structures below 4 feet, apply the termiticide so that the chemical will reach the soil down to at least 12 inches. Make sure that the solution will reach the bottom of the footing. When treating structures below 4 feet, apply the termiticide so that the chemical will reach the soil down to at least 12 inches. Make sure that the solution will reach the bottom of the footing. When treating structures below 4 feet, apply the termiticide so that the chemical will reach the soil down to at least 12 inches. Make sure that the solution will reach the bottom of the footing.

3. Keep the WSP(s) in outer packaging until just before use.

5. Water Soluble Packets are designed to dissolve in water. Applying the solution to soil may not be as effective as applying the solution directly to the woodwork or interior of the structure. Do not apply the product to soil or to direct contact with woodwork or interior of the structure.

1. Do not apply to inaccessible crawl space areas using pressures greater than 25 psi at the treatment tool. (Valve Open, or gun not turned off, close the hatch before starting agitation.)

4. In eyes:

a) Use a low pressure spray (not to exceed 25 psi at the treatment tool when the valve is open). Structural members contacting the soil at the above rates. Do not apply to inaccessible crawl space areas using pressures greater than 25 psi at the treatment tool.

• Rinse skin immediately with plenty of soap and water for 15 to 20 minutes.

4. In eyes:

• Rinse skin immediately with plenty of soap and water for 15 to 20 minutes.

3. Keep the WSP(s) in outer packaging until just before use.

2. Do not apply to inaccessible crawl space areas using pressures greater than 25 psi at the treatment tool.

2. Do not apply to inaccessible crawl space areas using pressures greater than 25 psi at the treatment tool.

2. Do not apply to inaccessible crawl space areas using pressures greater than 25 psi at the treatment tool.

4. In eyes:

• Rinse skin immediately with plenty of soap and water for 15 to 20 minutes.

2. Do not apply to inaccessible crawl space areas using pressures greater than 25 psi at the treatment tool.

4. In eyes:

• Rinse skin immediately with plenty of soap and water for 15 to 20 minutes.

4. In eyes:

• Rinse skin immediately with plenty of soap and water for 15 to 20 minutes.
5. Do not spray water from a hose or fill pipe to break or dissolve the WSP(s).

3. Keep the WSP(s) in outer packaging until just before use.

Keep water soluble packets in this container and store in a cool dry place but not below freezing (32° F).

For use by individuals/firms licensed or registered by the state to apply termite products. States may have more restrictive regulations relating to licensed applicators. Information contained in this label addresses federal, state, and local regulations and treatment standards for protection of subterranean termites. Generally a 20% overrun is used as a basis for all local regulations.

CONCRETE SLAB-ON-GROUND:

Do not apply at a lower dosage and/or concentration than specified on this label for application prior to installation of the finished grade.

Prior to each application, applicators must notify the general contractor, construction superintendent, or similar responsible party, of the intended termiticide application and intended sites of application and instruct the responsible person to notify construction workers and other individuals to leave the area to be treated. Following application and the area to be treated is accessible to construction, pest control applicators must provide any chemical treatments and any active residuals to the general contractor, construction superintendent, or similar responsible party. Additionally, the general contractor, construction superintendent, or similar responsible party, must send their punch list to the pest control applicator so that they will know if the treatments were not applied as advertised.

The pest control applicator is also required to inform the general contractor, construction superintendent, or similar responsible party, of the intended termiticide application and intended sites of application and instruct the responsible person to notify construction workers and other individuals to leave the area to be treated. Following application and the area to be treated is accessible to construction, pest control applicators must provide any chemical treatments and any active residuals to the general contractor, construction superintendent, or similar responsible party. Additionally, the general contractor, construction superintendent, or similar responsible party, must send their punch list to the pest control applicator so that they will know if the treatments were not applied as advertised.

The pest control applicator is also required to inform the general contractor, construction superintendent, or similar responsible party, of the intended termiticide application and intended sites of application and instruct the responsible person to notify construction workers and other individuals to leave the area to be treated. Following application and the area to be treated is accessible to construction, pest control applicators must provide any chemical treatments and any active residuals to the general contractor, construction superintendent, or similar responsible party. Additionally, the general contractor, construction superintendent, or similar responsible party, must send their punch list to the pest control applicator so that they will know if the treatments were not applied as advertised.

The pest control applicator is also required to inform the general contractor, construction superintendent, or similar responsible party, of the intended termiticide application and intended sites of application and instruct the responsible person to notify construction workers and other individuals to leave the area to be treated. 12.5” Water Soluble Packages (WSPs) are designed to dissolve in water. Agitation may be used, if necessary, to help dissolve the WSP. Failure to follow handling and handling instructions for using water soluble packages directly into spray tanks.

**STOP - READ THE LABEL BEFORE USE**

**KEEP OUT OF REACH OF CHILDREN**

**PRECAUTIONARY STATEMENTS**

**HAZARDS TO HUMANS AND DOMESTIC ANIMALS**

**CAUTION**

Read and understand all labeling instructions. Do not use unless you read and understand the entire label. This product is hazardous to both humans and domestic animals. Avoid contact with skin, eyes, or clothing. Avoid breathing dust or vapor. Wash hands after handling.

**HARMFUL IF SWALLOWED**

Keep water soluble packets in this container and store in a cool dry place but not below freezing (32° F).

Do Not Remove Packets From Container Except For Immediate Use.

**HARMFUL IF INHALED**

Avoid contact with skin, eyes, or clothing. Avoid breathing dust or vapor. Wash hands after handling.

**HARMFUL IF CONTINGENT WITH SKIN**

Avoid contact with skin, eyes, or clothing. Avoid breathing dust or vapor. Wash hands after handling.

**HARMFUL IF ABSORBED THROUGH SKIN**

Avoid contact with skin, eyes, or clothing. Avoid breathing dust or vapor. Wash hands after handling.

**KEEP OUT OF REACH OF CHILDREN**

**NOTE TO PHYSICIAN:** No specific antidote is available. Treat patient symptomatically.

**APPLICATION VOLUME:**

1.0 gallon of solution per 10 square feet to provide a uniform chemical treated zone. Use a coarse spray at a pressure not exceeding 20 lbs. per square inch (psi).

2. 0.33 gallons of solution (see APPLICATION VOLUME) per 10 linear feet for treatment of soil adjacent to the exterior of the structural wood of buildings. For application in hollow masonry or building units, use 0.2 gallons of solution per 10 square feet of wall to provide a uniform chemical treated zone. Use a coarse spray at a pressure not exceeding 20 lbs. per square inch (psi).

3. 0.17 gallons of solution (see APPLICATION VOLUME) per 10 square feet to provide a uniform chemical treated zone around the outside edges of concrete slabs. Use a coarse spray at a pressure not exceeding 20 lbs. per square inch (psi).

4. 0.17 gallons of solution (see APPLICATION VOLUME) per 10 linear feet to provide a uniform chemical treated zone around the outside bottom of above-grade masonry or concrete structures. Use a coarse spray at a pressure not exceeding 20 lbs. per square inch (psi).

5. 0.05 gallons of solution (see APPLICATION VOLUME) per 10 linear feet to provide a uniform chemical treated zone along the bottom of the footing. Use a coarse spray at a pressure not exceeding 20 lbs. per square inch (psi).

6. 0.05 gallons of solution (see APPLICATION VOLUME) per 10 linear feet to provide a uniform chemical treated zone above the base of a foundation wall. Use a coarse spray at a pressure not exceeding 20 lbs. per square inch (psi).

**APPLICATION TO WATER SOLUBLE PACKETS:**

1. Remove WSPs from the container and place into a spray tank. Allow the WSPs to dissolve for 30 minutes before spraying.

2. To dissolve WSPs in water, add 1.0 gallon of solution (see APPLICATION VOLUME) to 10 gallons of water.

3. Use a coarse spray at a pressure not exceeding 20 lbs. per square inch (psi).

**TREATMENT AROUND WELLS OR CISTERNS:**

1. Remove the lid from the cistern and wait 30 minutes before starting agitation. Do not allow more than 2 gallons of solution per 10 linear feet of water in the cistern. Keep children away from treated area until dry. Removal of cistern lid at this time will dislodge cistern debris. After cistern agitation, clean out any debris left in the cistern. Do not dispose of treated cistern water. Cisterns may need to be flushed several times before the CISTERNサイクル系统が完成する前に止める。
STOP - READ THE LABEL BEFORE USE KEEP OUT OF REACH OF CHILDREN CAUTION

PRESUMPTION OF INJURY: In the case of an injury that is believed to be a result of exposure to this product, contact a physician immediately.

NOTICE TO PERSONNEL: Primary routes of exposure to this product are: ingestion, inhalation, and skin absorption. Symptoms of exposure to this product may include vomiting and diarrhea, skin irritation, respiratory irritation, headache, dizziness, and in some cases, allergic reactions.

PRECAUTIONARY STATEMENTS

Hazardous to humans and domestic animals CAUTION

Insecticide In Water Soluble Packets (WSP) are designed to dissolve in water. Application shall be made for control of subterranean termites and control of other wood-destroying insects. This product is highly toxic to bees exposed to direct treatment or to honeybees flying over the treated area. Application must be advised to remove their pets and themselves from the structure if they see any signs of leakage. After application, the applicator is required to thoroughly neutralize any residual dust or spray mix, to verify that the WSPs have fully dissolved and the contents have been thoroughly mixed with water before use. Application must be made by trenching or trenching and rodding downward along the inside and outside of the foundation walls, floor drains, conduits, expansion joints or any cracks or holes in the basement floor. The mix solution must be applied to the trench and mixed with the soil as it is being placed in the trench.

INSTRUCTIONS FOR USING WATER SOLUBLE PACKETS DIRECTLY INTO SPRAY TANKS

Water Soluble Packets (WSP) are designed to dissolve in water. Application shall be made for control of subterranean termites and control of other wood-destroying insects. This product is highly toxic to bees exposed to direct treatment or to honeybees flying over the treated area. Application must be made by trenching or trenching and rodding downward along the inside and outside of the foundation walls, floor drains, conduits, expansion joints or any cracks or holes in the basement floor. The mix solution must be applied to the trench and mixed with the soil as it is being placed in the trench.

INFORMATION ON DOSAGE: This product is designed to be used in water at the rate of 0.05% to 0.1% of the total volume of water to be treated. Application shall be made in a manner that will allow for coverage of a continuous chemical treated area. Place all dust and all soil to be treated in a covered, easily accessible area. Application shall be made in a manner that will allow for coverage of a continuous chemical treated area. Place all dust and all soil to be treated in a covered, easily accessible area.

TREATMENT VOLUME: Application of this product shall be made in a manner that will allow for coverage of a continuous chemical treated area. Place all dust and all soil to be treated in a covered, easily accessible area. Application shall be made in a manner that will allow for coverage of a continuous chemical treated area. Place all dust and all soil to be treated in a covered, easily accessible area.
CONTROL OF WOOD INSECTING

The control of alive ground borers and subterranean termites in structures is achieved by: 0.75 to 1.25 lb of pesticide/1000 ft² of soil or 25 g/sq ft of building square footage. The application is performed by injecting a soil treatment into the perimeter or interior perimeter of the building. The treatment is designed to create a barrier that prevents termites from entering or exiting the building through soil-to-wood interfaces. The treatment is effective in preventing termite entry into the building and is recommended for new construction or as an infestation control measure in existing buildings.

The Application:

1. **PRE TREATMENT:**
   - The soil around the perimeter of the structure must be treated. The treatment should extend a minimum of 3 feet on all sides of the infested site.
   - The treatment should be applied as a coarse, low-pressure spray (about 20 psi) to the wood surface. Sufficient volume should be applied to cover the surface to the point of excess.
   - For small trees (<6 inches in diameter), apply 1 gallon of solution. For larger trees, apply 4 gallons per 10 linear feet (measured as the circumference at the root collar).
   - For all applications, apply the solution into the trench and mix with the excavated soil as it is being replaced into the trench. Use a low-pressure spray to treat soil which will be placed in the trench, ensuring proper incorporation of the active ingredient.

2. **POST TREATMENT:**
   - After treatment, plug and fill all holes drilled in concrete slab areas of the building with a suitable sealant.
   - Do not use water to cool the solution and do not allow leaves or other debris to fall into the treated areas.

Restrictions on Use:

- Do not apply to or in contact with the wood surface of the structure as the cure is completed.
- Only apply after the completion of construction and application of all other protective finishes.
- Do not apply in contact with wood beams, foundations, or other structural elements that are in direct contact with treated areas.
- Do not apply in contact with wood surfaces that will be painted or stained.
- Do not apply to wood surfaces that are subject to mechanical alteration prior to treatment.

STORAGE AND DISPOSAL

- Do not dispose of empty containers in storm drains, sewers, or bodies of water.
- Do not mix with or use with other products unless specified.
- Do not use on or in contact with wood surfaces that will be painted or stained.
- Do not use on wood surfaces that are subject to mechanical alteration prior to treatment.

PRECAUTIONS FOR APPLICATIONS

- After treatment, plug and fill all holes drilled in concrete slab areas of the building with a suitable sealant.
- Do not use water to cool the solution and do not allow leaves or other debris to fall into the treated areas.

LIMITATIONS OF LIABILITY:

- The use of the product is subject to the following limitations: Do not use on or in contact with wood surfaces that will be painted or stained.
- Do not use on wood surfaces that are subject to mechanical alteration prior to treatment.
- Do not use in areas where water is present.

IMPORTANT: READ BEFORE USE

- Read the entire label and follow the instructions provided.
- Do not use this product in the presence of children or pets.
- Do not use on or in contact with treated areas that will come into contact with food, feed, or water.

CONTROL OF WOOD INFESTING PESTS

For control of above ground termites and carpenter ants in treated areas, apply a 0.05 to 0.1% solution of water premixed Premise 75 Insecticide in Water Soluble Packets to soil or exposed wood in a manner consistent with the product labeling or contact your local distributor for more information. The spray volume will depend on the type of termite or carpenter ant species encountered and the area of the treated soil that is not exposed to the air.

Attachment: Use the label directions to achieve the desired treatment effects.

PRECAUTIONS FOR APPLICATIONS

After treatment, apply a surface treatment to soil or exposed wood in a manner consistent with the product labeling or contact your local distributor for more information. The spray volume will depend on the type of termite or carpenter ant species encountered and the area of the treated soil that is not exposed to the air.

STORAGE AND DISPOSAL

Do not store water, food, feed, or livestock at a location where wood or other materials may be infested with termites.

These products may be mixed with water or other materials in a tank or other container prior to application. However, the water used for mixing should not exceed the maximum recommended volume of water that can be used for the application.

WARNING: Do not allow residents or pets into the immediate area during the application or contact with treated areas until spray has dried. Interior applications for ant control should be applied while the treated area is unoccupied. Do not allow residents or pets into the immediate area during the application or contact with treated areas until spray has dried. Interior applications for ant control should be applied while the treated area is unoccupied.

For control of above ground termites and carpenter ants in treated areas, apply a 0.05 to 0.1% solution of water premixed Premise 75 Insecticide in Water Soluble Packets to soil or exposed wood in a manner consistent with the product labeling or contact your local distributor for more information. The spray volume will depend on the type of termite or carpenter ant species encountered and the area of the treated soil that is not exposed to the air.

Attachment: Use the label directions to achieve the desired treatment effects.

CONTROL OF WOOD INFESTING TERMITES

For control of above ground termites and carpenter ants in treated areas, apply a 0.5% to 1.0% solution on or within 1 foot of all surfaces of Premise® Insecticide in Water Soluble Packets. The label includes the following restrictions and limitations on use:

- The solution shall not exceed 1 foot from the ground surface or a termite barrier system.
- The solution shall not be applied to surfaces where it may come in contact with electrical equipment, piping, or other utility connections.
- The solution shall not be applied to surfaces that are not accessible to a termite control professional.
- The solution shall not be applied to surfaces that are subject to freezing temperatures.

Recommended treatment:
- For control of above ground termites and carpenter ants:
  - Apply a 0.5% to 1.0% solution on or within 1 foot of all surfaces of Premise® Insecticide in Water Soluble Packets as specified on the label.

Carcinosomes and similar non-wood structural materials shall be treated with a 0.5% to 1.0% solution. When treating with Premise® Insecticide in Water Soluble Packets, a 0.5% to 1.0% solution shall be used to treat any exposed surfaces in contact with wood structural materials.

LIMITATIONS OF LIABILITY TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, BAYER MAKES NO OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE, TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, BAYER DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE.

IMPORTANT: READ BEFORE USE

Do not apply to soil. Do not apply to surfaces that are not accessible to a termite control professional. Do not apply to surfaces that are subject to freezing temperatures. Do not allow residents or pets into the immediate area during the application or contact with treated areas until spray has dried. Interior applications for ant control are not required if the dwelling is dehumidified. Do not apply athermal sprays on painted, planed, or powdered surfaces. Do not apply at a lower dosage and/or concentration than specified on this label.

STORAGE AND DISPOSAL

Do not store water, food, feed, or dry-bait termite stations near Premise® Insecticide in Water Soluble Packets. Do not store in direct sunlight. Do not dispose of containers in drains or sewers. Do not allow to enter storm drains. Do not allow to leach into ground water. Do not allow to enter any drainage system. Do not use the container for any other purpose. Do not store near food or pet food. 

IMPORTANT: READ BEFORE USE
