Flammable: crops or weeds while bees are actively visiting the area.

To ensure that wind or rain do not blow or wash pesticide off the ditches, gutters or surface waters. Applying this product in calm allow pesticide to enter or run off into storm drains, drainage and aquatic invertebrates. Do not apply directly to water or to areas where foods are served, such as dining rooms but excluding areas where foods may be prepared or held. Non-food areas are areas such as garbage rooms, lavatories, entries, vestibules, offices, locker rooms, machine rooms, boiler rooms, garages, mop closets and storage areas (after bottling or canning).

When used outdoors: Do not water the treated area to the point of run-off. Do not make applications during rain. Application is prohibited directly into sewers or drains or to any area like a gutter where drainage to sewers, storm drains, water bodies or aquatic habitat can occur. Do not allow the product to enter any drain during or after application. All outdoor applications must be limited to only spot or crack-and-crevice treatments, except for the following permitted uses: 1) Treatment to soil or vegetation around structures; and 2) Applications to building foundations, up to a maximum height of 3 feet. Other than applications to building foundations, all outdoor applications to impervious surfaces such as sidewalks, driveways, patios, porches and structural surfaces (such as doors and windows) are limited to only spot and crack-and-crevise applications.

For Control of Nests of Hornets, Wasps and Yellow Jackets: The best time to treat is in the early morning or early evening, when air temperature is cooler and most insects are in the nest and little activity is observed around the nest opening. Spray only if the air is still. Stand at a safe distance from the nest, not directly under it. Hold container upright at arm’s length, point the nozzle at the nest, and spray in the opening of the nest; then spray the nest of the nest until saturated. Treated insects may fall out of the nest and die. Any insects returning to the nest after treatment will be killed. Wait 48 hours before removing the nest. Hose off foliage of desirable plants that are contacted with spray. This product may stain or adversely affect vinyl, painted and plastic surfaces. Avoid application to asphalt roofing shingles as staining may occur. Before using in areas where spray may contact these surfaces, test in an inconspicuous area and recheck in a few hours.

Storage and Disposal: Do not contaminate water, food or feed by storage or disposal. Pesticide Storage: Store in a cool, dry (preferably locked) place inaccessible to children and domestic animals.

Active Ingredients: Tetramethrin (CAS No. 7694-12-0) 0.200%
Sumithrin (CAS No. 66020-80-2) 0.125%
Other Ingredients* 99.675%

* Contains petroleum distillate
