PRECAUTIONARY STATEMENTS
HazardS TO HUMANS AND DOMESTIC ANIMALS
DANGER: Corrosive. Causes skin burns and moderate eye irritation. Harmful if swallowed or inhaled. Do not get in eyes, on skin, or on clothing. Avoid breathing spray mist, vapors or sand dust. Wear goggles or chemically resistant glasses. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, or using tobacco. Wear coveralls, non-flamable gasketed shirt and long pants, chemical resistant gloves, protective eyewear (goggles, face shield or safety glasses), socks, and chemical resistant footwear. Remove contaminated clothing and wash clothing before reuse. May cause an aspiration pneumonitis hazard.

FIRST AID
IF IN EYES: • Hold eye open and rinse slowly and gently with water for 15-30 minutes.
• Remove contact lenses, if present, after the last 5 minutes, then continue rinsing eye.
• Call a poison control center or doctor for treatment advice.

IF SWALLOWED: • Call a poison control center or doctor for treatment advice.
• Have the product container or label with you when calling a poison control center or doctor.
• Do not give anything by mouth to an unconscious person.

IF INHALED: • Move person to fresh air.
• If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth, if possible.
• Call a poison control center or doctor for further treatment advice.

IF ON SKIN OR CLOTHING: • Rinse skin immediately with plenty of water for at least 15 - 20 minutes.
• Call a poison control center or doctor for treatment advice.

NOTE TO PHYSICIAN: Probable mucosal damage may contaminate the use of plastic tourniquet. This product contains petroleum distillates. Vomiting may cause aspiration pneumonitis.

ENVIRONMENTAL HAZARDS: This material is toxic to fish. Do not apply directly to water by cleaning of equipment or disposal of wastes. Do not allow direct or indirect drainage of treated water into surface or ground water. Do not apply to drainage ditches during periods of increased drainage. Do not apply directly to streams or ponds. Do not apply directly to water or on areas that are flooded. Do not apply during periods of increased drainage as this may cause the product to wash off into surface or ground water.

PHYSICAL OR CHEMICAL HAZARDS: Combustible. Do not use or store near heat or open flame. Use only with adequate ventilation during mixing, application and disposal. Use obstructed open-ventilated method to ensure proper ventilation. Fumes, fume, smoke, or mist may be hazardous. Excessive heat may cause the product to explode.

STORAGE AND DISPOSAL: Keep away from heat and open flame. Store this product in its original labeled container in a storage area located in a cool, dry place. Keep product container tightly closed and away from children. Keep container closed when not in use. In case of spillage, absorb the spill and dispose of it in accordance with local applicable regulations. Do not contaminate water, food or feed by storage or disposal. Open dumping is prohibited.

PESTICIDE DISPOSAL: Pesticide, spray mixture, or residue that cannot be used and chemically reprocessed should be disposed of according to procedures approved by Federal, State and local disposal authorities.

CONTAINER DISPOSAL: Triple rinse empty industrial containers and dispose of in an approved landfill. Consult Federal, State or local disposal authorities for approved alternative procedures.

VOC (as supplied) 300 gram/liter maximum. Do not exceed your state's compliant limit.

NOTICE: THIS PRODUCT CONTAINS A CHEMICAL KNOWN TO THE STATE OF CALIFORNIA TO CAUSE CANCER, BIRTH DEFECTS, OR OTHER REPRODUCTIVE HARM.

GENERAL DESCRIPTION: Pint Marine Paint; Solid Artificial Paint is a water-based, polyurethane, exterior paint coated to a sanded, sanded and sandblasted surface or one that has been coated with an organic surface treatment. This material is used to cover all types of flooring and most in the steams and most funnels. Use for use in fresh, salt or brackish water on hulls and underwater parts below the waterline. This product is intended for use in recreational and commercial vessels of any size.

APPLICATION: This is a violation of federal law to use this product in a manner inconsistent with its labeling.

PREPARATION OF SURFACE: The surface to be painted should be clean, dry and free of any contamination or foreign matter. Always prepare the surface to be painted by sanding and chemical cleaning before any paints or primers are applied. When sanding the artificial paint use a dust mask to prevent the inhalation of sand dust. Soft, soft bottom boats must be completely removed before applying.

COVERAGE: APPLICATION AND TEMPERATURE: This product can be applied by brush, roller or spray. All painting should be done between 9:00 a.m. and 4:00 p.m. in order to avoid the possibility of dew or condensation spoiling the application. The temperature range for application should be between 50 and 80 degrees F.

At least two, preferably three coats, should be applied for best performance, particularly in high wave areas such as the Atlantic Ocean. The total thickness should not exceed 3/4 of an inch. Separate coats will cover approximately 120 square feet per gallon when applied at 2 dry mill films. Thickening: Thinning: Use Pint 129 Brush Thinner for thinning this product if needed, particularly on warm or breezy days. Pint 121 Spraying Thinner can be used on thinnings for spraying and for cleaning equipment. Do not use more than 10% (120 milliliters per gallon) of thinning. If the final paint film thickness exceeds 3/4 of an inch, the paint will not be satisfactory. Do not paint below 5 degrees F. DRY TIME: The minimum recoat time is 4 hours. The minimum dry time between the first coat and the second coat is 16 hours.

NOTE: Under adverse drying conditions such as those encountered on cool or damp days extend the dry times by 50%. In order to ensure that all the solvents are out of the paint film. The maximum time between painting is 30 days. MAINTENANCE OF ANTI-FOULING PAINT: The anti-fouling paint can be effective under all conditions of exposure. Non-migrating antifouling paint can be injected with hot antifouling paint. Extreme hot and cold water temperatures, salt, dirt, oil, brackish water and even electrical current can ruin an anti-fouling paint. Therefore, we strongly suggest that the bottom of the boat be checked regularly to make sure it is clean and that no growth is occurring. Lightly scrub the bottom with a soft brush to remove anything from the anti-fouling paint surface. Scrubbing is particularly important with boats that are idle for extended periods of time. This product is not recommended for the bottom in water-processed systems.

SYSTEMS: Mix paint throughly to ensure toxins are evenly dispersed throughout the can. All surfaces must be clean, dry and properly prepared prior to painting.

PROTECTIVE FILM: Thinner is applied continuously during the 72-hour dry time period. Within 72 hours, a protective film will form on the surface of the paint, preventing further contamination of the surface. Paint will adhere to the primer and sub coats. Do not apply any coats until the surface has dried. Do not apply any coats until the protective film has formed. CAUTION: Paint will not form a protective film if the surface is contaminated with water.

TIVE INGREDIENTS:

Omnadine (2,500 ppm) 2.50%
ERT INGREDIENTS: 75.50%

PER AS METALLIC 13.1%
