Germicidal Bleach

QUITESE LA ROPA CONTAMINADA. ENJUÁGSÉSE INMEDIATAMENTE LA PIEL CON ABUNDANTE AGUA DURANTE 15–20 MINUTOS.

CONTACTO CON LA PIEL O LA ROPA:

PELIGRO: CORROSIVO

MANTENGA LOS OJOS ABIERTOS Y ENJUÁGUELOS CON AGUA LENTAMENTE, CON CUIDADO,

FOR DISINFECTING

Amount of Amount Instructions

All Surfaces
1 Cup 1 Gallon

Bathubs & Showers
3/4 Cup 1 Gallon

Toilet Bowls
1 Cup

FOR SANITIZING

Amount of Amount

Work Surfaces
1/2 oz.

Plastics, Glass, Utensils
1/2 oz.

Platos, Cristalería, Utensilios
1 Tbsp. 1 Gallon

Stainless Steels, Silverware, Dishes
3/4 Cup 1 Gallon

Refrigerators, Freezers
1 Tbsp. 1 Gallon

Incluidos los Viserales o Cuellos de los Animales y Estructuras Ossificadas Sin Poros

STORAGE AND DISPOSAL: Store away from children. Reclose cap tightly after each use. DANGER: CORROSIVE. Do not use or mix with other chemicals. Do not use on non-stainless steel, aluminum, silver or anodized aluminum. TUBULAR BLEACH should not be used as a substitute for a high level disinfectant. Use of this product on garments may cause damage to the materials. Do not use on painted wood or non-porous plastic surfaces. Store in a cool, dry place. Do not contaminate food or feed by storage and disposal. Removers, acids or products containing ammonia. To do so will release hazardous irritating gases. Prolonged contact with metal may cause pitting or discoloration.

NOTA PARA EL MÉDICO:

Lávese después de tener contacto con el producto. Evite inhalar los vapores y utilice solamente en un área bien ventilada.

PROTECCIÓN PERSONAL:

Use disposable latex gloves, gowns, masks and eye coverings. Blood and other body fluids should be autoclaved and disposed in autoclaves or incinerators. Use disposable protective suits, gowns, masks and gloves when working with this product. Use disposable hypodermic needles and syringes when using this product. In the event of accidental exposure, wash the exposed skin area with soap and water. Prolonged contact with metal may cause pitting or discoloration.

FOR DISINFECTING

INSTRUCTIONS Glutation

1. Mix 1 part of this product with 9 parts water to achieve a 1:10 dilution (~ 100 ppm available chlorine). Pre-wash items, then soak them in bleaching solution for at least 5 minutes. Rinse well and air dry.

2. Prewash surface and wipe with bleaching solution. Allow solution to contact surface for at least 5 minutes. Rinse well and air dry.

4. Prewash surface and wipe with bleaching solution. Allow solution to contact surface for at least 5 minutes. Rinse well and air dry.

5. Use disposable latex gloves, gowns, masks and eye coverings. Blood and other body fluids should be autoclaved and disposed in autoclaves. Use disposable protective suits, gowns, masks and gloves when working with this product. Use disposable hypodermic needles and syringes when using this product. In the event of accidental exposure, wash the exposed skin area with soap and water. Prolonged contact with metal may cause pitting or discoloration.

PRIMEROS AUXILIOS: CONTACTO CON LOS OJOS:

- Rinse, rinse, and rinse. After washing and rinsing, brush inside with bleach solution.
- Wash, rinse, wipe surface area with bleach solution for at least 1 minute, let air dry.
- Wipe and rinse. After washing, soak for at least 1 minute in a solution of 1/2 cup bleach + 1 gallon of water.
- Prewash items, then soak them in bleach solution for at least 1 minute, let air dry.
- Wash, rinse, wipe surface area with bleach solution for at least 1 minute, let air dry.

NOTE TO PHYSICIAN:

- IF SWALLOWED: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15–20 minutes.
- IF ON SKIN OR CLOTHING: Quítese la ropa contaminada. Enjuáguese inmediatamente la piel con abundante agua durante 15–20 minutos.

STORAGE AND DISPOSAL: Store away from children. Reclose the cap tightly after each use.

NSF Category Code: B2-Laundry products – nonfood contact
Reducing exposure to Clostridium difficile in healthcare settings. *Clostridium difficile* spores have been found on hard, nonporous surfaces in healthcare settings, have been shown to survive on surfaces for extended periods of time (up to 5 months), and have been cultured from the hands of hospital personnel working in environments with surface contamination. Laboratory studies indicate that 1:10 diluted CPPC Ultra Bleach 2 reduces *C. difficile* spores on surfaces by six logs in 10 minutes. Environmental disinfection interventions that include the use of 1:10 sodium hypochlorite for surface disinfection can reduce exposure to *C. difficile* from treated surfaces in healthcare settings.

Special Instructions for Cleaning Prior to Disinfection against *Clostridium difficile* [endo] spores.

**Personal Protection:** Wear appropriate barrier protection such as gloves, gowns, masks or eye covering.

**Cleaning Procedure:** Fecal matter/waste must be thoroughly cleaned from surfaces/objects before disinfection by application with clean cloth, mop and/or sponge saturated with diluted bleach solution. Cleaning should include vigorous wiping and/or scrubbing until visible soil is removed. Special attention is needed for high-touch surfaces. Surfaces in patient rooms should be cleaned in a consistent manner (for example right to left) with restrooms cleaned last. Do not reuse soiled cloths.

**Infectious Materials Disposal:** Cleaning materials used that may contain feces/waste should be disposed of immediately in accordance with local regulations for infectious materials disposal.

**Directions for Use:** [For] Killing *Clostridium difficile* [spores]: Add 1 part bleach to 9 parts water to achieve a 1:10 dilution (~6000 ppm available chlorine) before use. Clean hard, nonporous surfaces by removing gross filth [loose dirt, debris, blood/bodily fluids, etc.]. Apply 1:10 solution and let stand for 10 minutes. Rinse and air dry. Prepare fresh solution daily. [Avoid contact with surfaces that may be damaged by bleach.] Do not use on non-stainless steel, aluminum, silver or chipped enamel.

To sanitize food eggs: thoroughly clean all eggs. Prepare a 200 ppm available chlorine solution. The sanitizer temperature should not exceed 130° F. Spray the warm sanitizer so that the eggs are completely wet. Allow the eggs to fully dry before casing or breaking. Do not apply a potable water rinse. The solution should not be re-used to sanitize eggs.

**NSF Category Code: Q4-Shell Eggs Chlorine sanitizers**

**For continuous washers**, prepare washing solution as above. Add an additional 1/2 oz of detergent per every 4 gallons of 50 ppm available chlorine solution every 30 minutes. Dump wash tank and recharge every 2 hours. **For manual method**, soak eggs for only 1 to 2 minutes. Agitate basket. Make sure eggs are completely covered. Air-dry eggs as rapidly as possible. Store in cool (55º F) room. Maintain relative humidity of 60-80%.

**NOTE:** Keep egg-washing equipment sanitary. Frequent cleaning will aid in operation and produce more sanitary eggs. While equipment is idle, bacteria can multiply. This contamination can be reduced by thoroughly flushing all equipment immediately before use with a solution of 200 ppm available chlorine.
CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8) FOR MEAT & POULTRY PLANT LAUNDRY USE
[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

This product may be used on fabric which contacts meat or poultry products directly or indirectly, provided that the fabric is thoroughly rinsed with potable water at the end of the laundering operation.

To sanitize laundry, add enough of this product to reach 200 ppm (parts per million) available chlorine. (1 cup of this product per standard washer, 1 1/4 cups for extra large washers or heavily soiled loads). Use a good detergent. For best results, dilute this product with a quart of water and add to wash 5 minutes after the wash has begun. Use chlorine test strips to adjust to exactly 200 ppm available chlorine.

NSF Category Codes:
B1-Laundry products – food contact
B2-Laundry products – nonfood contact
G4-Chlorine products

CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8)
FOR DISINFECTION OF FLOORS, WALLS, SHOWERS AND TOILETS
[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

TO DISINFECT FLOORS, WALLS AND SHOWERS: For nonporous surfaces such as vinyl or ceramic tile, clean surfaces to remove gross filth. Rinse surfaces thoroughly with a 3600 ppm available chlorine solution. Allow solution to remain on the surface for 5 minutes. Rinse. [Let air dry.]

TO DISINFECT TOILETS: Flush toilet. Pour 1 cup of this product into bowl. Brush bowl thoroughly, making sure to get under the rim and let solution stand for 5 minutes and flush again.

CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8)
FOR AQUACULTURAL USES
[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

FISH PONDS - Remove fish from ponds prior to treatment. Thoroughly mix 210 [fl] oz of this product to 10,000 gallons of water to obtain 10 ppm available chlorine.

Pour into drained pond potholes. Repeat if necessary. Do not put desirable fish back into refilled ponds until chlorine residual has dropped to 0 ppm, as determined by a test kit. Add more product to the water if the available chlorine level is below 1 ppm after 5 minutes. Return fish to pond after the available chlorine level reaches zero.
FISH POND EQUIPMENT - Thoroughly clean all equipment prior to treatment. Thoroughly mix 4.5 [fl] oz of this product to 10 gallons of water to obtain 200 ppm available chlorine. Porous equipment should soak for one hour.

MAINE LOBSTER PONDS - Remove lobsters, seaweed etc. from ponds prior to treatment. Drain the pond. Thoroughly mix 12,600 [fl] oz of this product to 10,000 gallons of water to obtain at least 600 ppm available chlorine. Apply so that all barrows, gates, rock and dam are treated with product. Permit high tide to fill the pond and then close gates. Allow water to stand for 2 to 3 days until the available chlorine level reaches zero. Open gates and allow 2 tidal cycles to flush the pond before returning lobsters to pond.

CONDITIONING LIVE OYSTERS - Thoroughly mix 10.5 [fl] oz of this product to 10,000 gallons of water at 50 to 70 degrees F to obtain 0.5 ppm available chlorine. Expose oysters to this solution for at least 15 minutes, monitoring the available chlorine level so that it does not fall below 0.05 ppm. Repeat entire process if the available chlorine level drops below 0.05 ppm or the temperature falls below 50 degrees F.

CONTROL OF SCAVENGERS IN FISH HATCHERY PONDS - Prepare a solution containing 200 ppm of available chlorine by mixing 4.5 [fl] oz of product with 10 gallons of water. Pour into drained pond potholes. Repeat if necessary. Do not put desirable fish back into refilled ponds until chlorine residual has dropped to 0 ppm, as determined by a test kit.

CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8)
FOR DAIRY AND CREAMERY EQUIPMENT SANITATION
[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]

This product is effective as a chemical sanitizer of milk utensils, containers and equipment. This product dissolves milk solids and other protein material and is a quick and effective deodorizer.

An exposure period of at least 2 minutes to a 200 ppm available chlorine solution should be maintained when the solution temperature is 75° F. Use chlorine test strips to adjust solution to desired strength. Lower solution temperatures result in slower action; for each 18° F drop in temperature, approximately double the exposure time is needed to achieve equivalent bactericidal action with same strength of solution. You can also compensate for lower temperatures by increasing the concentration of this product.

It is important to clean out large deposits of milk or other organic matter before applying this product/water solution. A sharp decline in the available chlorine content of the solution following circulation through milk processing equipment is usually regarded as evidence of inadequate cleaning of the equipment and should be promptly investigated.

RUBBER TEAT CUPS AND TUBES - Before each milking, prepare a 200 ppm available chlorine sanitizing solution. Dip teat cups into this solution for 2 minutes before transferring them from one cow to another.

To Sanitize - SOAKING METHOD: After each milking, wash cups and tubes by brushing thoroughly with detergent solution. Rinse cups and tubes with cold water. Prepare a 200 ppm available chlorine sanitizing solution in earthenware, glass, porcelain or stoneware containers. Submerge cups in this solution for 1 minute, holding ends of tubes; coil tubes slowly into solution between milkings; drain thoroughly before using.

To maintain sanitizing solution at proper strength, add 1 1/2 oz of this product daily (in hot weather, 3 oz) for each 10 gallons water; mix well. Protect solution from light. Renew solution daily. Old solution may be utilized for deodorizing and making floors and drains sanitary; for this purpose, add 1 teaspoon of this product for each gallon of old solution; mix well.
To Sanitize - RACK METHOD: After each milking, rinse cups and tubes in cold water. Wash in detergent solution, then rinse. Prepare a 200 ppm available chlorine sanitizing solution; place solution in bottle above rack for 1 minute. Place tubes and cups in rack; fill with solution and let stand between milkings; drain thoroughly and air dry before using. Old solution may be utilized in deodorizing and making floors and drains sanitary.

METAL TEAT CUPS AND TUBES - Before each milking, prepare a 200 ppm available chlorine sanitizing solution. Dip teat cups into this solution before transferring them from one cow to another.

To Sanitize: After each milking, rinse cups and tubes with cold water. Wash in detergent solution; rinse in a 200 ppm available chlorine solution for 1 minute; drain thoroughly and dry before using. (Metal cups should not be left in bleach solution.)

TO CLEAN AND SANITIZE MILKING MACHINES AND UTENSILS: Immediately after milking, flush equipment with clean, lukewarm water. Dismantle equipment after each milking and wash it (including all rubber parts and stanchion hoses) and all utensils with a solution prepared by thoroughly mixing 1 oz of your [regular] [powdered] detergent with each gallon of a 200 ppm available chlorine solution. Water temperature should be 100° F to 130° F. (DO NOT MIX THIS PRODUCT WITH ACID CLEANERS OR MILK STONE REMOVERS.) Rinse equipment and utensils thoroughly with clean, clear water; drain. Air dry. Immediately before use, sanitize according to directions shown below.*

CLEANING IN PLACE - BULK STORAGE TANKS, DAIRY PIPELINES, TRANSFER STATIONS: Immediately after emptying milk, flush surfaces with a large volume of clear, lukewarm water until water runs completely clear. Thoroughly mix solution of 1 oz of your [regular] [powdered] detergent with each gallon of a 200 ppm available chlorine solution. Hot water should be used if available, and the temperature of the solution should be maintained at 120-160° F throughout the entire circulation. (DO NOT USE THIS PRODUCT WITH ACID CLEANERS OR MILK STONE REMOVERS.) Circulate the sanitizing solution through the system for 10 to 15 minutes. (Brush-wash with solution all parts not coming in contact with solution as it circulates.) Rinse thoroughly with clean, clear water; allow to drain. Air dry. Seal this equipment to help protect against contamination. Immediately before use, sanitize according to directions shown below.*

SEPARATORS, STRAINERS, MILK CANS, PAILS, CHURNS, PASTEURIZERS - to clean and sanitize: After using, rinse immediately with clear, cold water; then scrub or pressure-spray with solution of 1 oz of your [regular] [powdered] detergent thoroughly mixed with each gallon of 200 ppm available chlorine solution. Rinse with clean, clear water; drain thoroughly. Air dry. Immediately before use, sanitize according to directions shown below.*

MILK BOTTLES - To sanitize: Clean and rinse, then immerse for 5 minutes in a 200 ppm available chlorine solution prepared with cold or lukewarm water; drain; fill. If bottles are not filled promptly, rinse again with same strength bleach solution immediately before filling; drain thoroughly. Ordinarily, 12 gallons of this strength solution will sanitize 5000 clean quart bottles. Keep this bleach solution clean and free from milk particles.

ICE CREAM FREEZERS - To clean and sanitize: After using, flush with warm water until water runs clear. Scrub or pressure-spray with solution prepared by thoroughly mixing 1 oz of [regular] [powdered] detergent with each gallon of 200 ppm available chlorine solution. Let stand 2 minutes. Rinse thoroughly with clean, clear water; drain. Air dry. Immediately before use, sanitize according to directions shown below.*

*BEFORE USE - rinse with a 200 ppm available chlorine sanitizing solution 2 minutes; drain thoroughly.
This product - a positive, powerful germicide - is a 6.15% sodium hypochlorite solution containing approximately 5.84% available chlorine by weight. In addition to being a highly effective liquid chlorine bleach for laundering and disinfecting, it is widely used in sanitation of poultry and livestock houses and equipment, dairies, creameries, restaurants and taverns, as well as for purification of drinking water and disinfection of water for swimming and wading pools.

**IMPORTANT:** Always thoroughly mix with water as directed before using.

Do not allow undiluted product to come in contact with any fabric. (If it does, rinse out immediately with clear, cold water.)

Do not apply with natural sponge.

Do not use on non-stainless steel, aluminum, silver, or chipped enamel.

If used on metal, solution should be allowed to stand for **no more than 5 minutes**, and then rinsed off thoroughly with clear water; otherwise, it may slightly discolor and eventually corrode the metal.

If a metal sprayer is used to apply the solution, rinse sprayer thoroughly after use with clear water, and then oil the plunger.

SEPTIC TANK OPERATION is not affected by regular home and farm use of this product.

Oakland, California 94612-1888
CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8)
AS A FUNGICIDE FOR SEED POTATOES
[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

This product is fungicidal to the Verticillium wilt organism *V. albo-atrum* (microsclerotial type) on seed potatoes. A bleach solution of this product is applied to whole seed and freshly cut seed potato pieces during the cutting operation for planting. [Research at the Washington State University Irrigated Agriculture Research and Extension Center* has shown that treatment with a sodium hypochlorite solution helps to prevent the spread of organisms to uninfected soil or fields via seed potato surfaces.]

**Use Instructions:**

Thoroughly mix a solution of 5000 ppm available chlorine for spraying. Use this solution to spray freshly cut seed potato pieces from the top and bottom of the cutting chain or elevator with a series of non-mist nozzles at 3 to 5 psi. Thoroughly cover all cut and uncut surfaces with the solution. The treatment will be most effective on clean seed tubers, as the organic matter in soil will reduce the effectiveness of the sodium hypochlorite. Plant within four hours of the cutting and bleach treatment operation. If planting should be delayed, store the treated seed in clean, open, well-ventilated bins or truck beds. Storing cut, wet seed in large unventilated containers will contribute to secondary breakdown from soft rot organisms.

**Safety Precautions**

Do not mix full-strength product or treatment solution with any other agricultural chemical, ammonia, or acid. Avoid prolonged contact of this product with skin. Wear safety glasses. If full strength or diluted bleach is splashed in the eyes, flush with water.

Conduct the spraying operations either outside, in a well-ventilated building, or under a hooded exhaust system. Use non-misting nozzles to avoid breathing of mist. Wear a face mask and plastic or rubber gloves and clothing. Because sodium hypochlorite is corrosive to many metals, chains and other machine parts should be either plastic or plastic-coated and rinsed with clear water after use.

PLEASE NOTE: DO NOT USE THE TREATED SEED FOR FOOD OR FEED. Use the bleach treatment only on crops and for the purposes recommended. Apply only as specified above. Do not apply in a dipping operation or bleach solution may become contaminated with soil and organic matter from the potato surfaces and lose its effectiveness.

CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8) FOR MEAT AND POULTRY PROCESSING WATER
Not approved for use with CSFs A10 through A17
[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

This product may be used in processing water of meat and poultry plants at concentrations up to 5 ppm (parts per million) calculated as available chlorine. Chlorine may be present in poultry chiller intake water, in water for reprocessing poultry carcasses internally contaminated with feces, and in red meat carcass final wash water at concentrations between 25 and 50 ppm calculated as available chlorine. Use Chlorine Test Strips to adjust to desired available chlorine level. Chlorine must be dispensed at a constant and uniform level and the method or system must be such that a controlled rate is maintained.

CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8) FOR POULTRY CARE:
SPECIAL INSTRUCTIONS FOR INACTIVATING AVIAN INFLUENZA A
[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

FOR INACTIVATION OF AVIAN INFLUENZA A IN POULTRY HOUSES, BROODERS, HATCHERIES:
1. Remove all poultry or animals and feeds from the premises, trucks, vehicles, coops, crates and enclosures.
2. Remove all litter and manure or droppings from floors, walls and surfaces of barns, pens, stalls, chutes, and other facilities and fixtures occupied or traversed by animals or poultry.
3. Empty all troughs, racks and other feeding and watering appliances.
4. Thoroughly clean all surfaces with soap or detergent and rinse with water.
5. Mix 1 part of this product with 24 parts water. Saturate all surfaces with the disinfecting solution for 5 minutes.
6. Immerse all halters, ropes, and other types of equipment used in handling and restraining animals, as well as forks, shovels, and scrapers used for removing litter and manure.
7. Ventilate buildings, coops, and other closed spaces. Do not house livestock or poultry or employ equipment until treatment has been absorbed, set, or dried.
8. Thoroughly scrub all treated feed racks, mangers, troughs, automatic feeders, fountains, and waterers with soap or detergent, and rinse with potable water before reuse.

CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8) FOR POULTRY CARE
[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Keeping poultry healthy, productive and profitable is largely a problem of disease prevention. Remedial measures are much more difficult and often less successful than preventing the spread of disease before it infects the flock. Regular use of this product in the sanitation and disinfection of chicken houses, brooders, and other poultry equipment is an effective aid in preventing many diseases of bacterial and viral origin.

TO SANITIZE DRINKING WATER - Prepare a 5ppm available chlorine solution using clear water. Let stand 1 minute. Use in glass, porcelain, stoneware or concrete containers. Clean containers daily; rinse.

For young chicks, a 2 ppm available chlorine solution should be prepared since baby chicks do not soil the water as rapidly as grown chickens, and the solution retains its effectiveness longer.
When cleaning drinking water containers, etc., a 1600 ppm available chlorine solution is effective in removing the slime. **DO NOT ALLOW BIRDS TO DRINK THIS SOLUTION.**

**TO CLEAN AND DISINFECT POULTRY HOUSES, BROODERS, HATCHERIES:** Poultry houses should be cleaned and disinfected between cycles; hatcheries should be cleaned weekly or as necessary to keep sanitary. Metal surfaces can be satisfactorily disinfected. Wooden surfaces are difficult to sanitize by any method.

1. Remove all litter, loose dirt and debris.
2. Thoroughly mix solution of 1 oz [powdered] detergent with each gallon of 3600 ppm available chlorine solution*.
3. Using this solution, scrub or pressure-spray all exposed areas, including floor, walls, ceiling posts and support beams. Let stand for 5 minutes.
4. Rinse with clean, clear, **cold** water.
5. Let dry thoroughly before introducing poultry.

**METAL INCUBATORS, FEEDERS, WATER CONTAINERS, OTHER POULTRY EQUIPMENT AND UTENSILS - To clean and disinfect,** remove loose dirt and debris. Scrub or pressure-spray with solution of 1 oz [powdered] detergent thoroughly mixed with each gallon of 1200 ppm available chlorine solution*. Let stand for 2 minutes. Rinse with clear, **cold** water. Let dry.

*Where this product/detergent solution is recommended for sanitizing poultry houses and equipment, use **hot** water (140º F or above) if available.

---

**CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8)**

**FOR ENCLOSURES AND EQUIPMENT USED FOR AMPHIBIAN CARE:**

**SPECIAL INSTRUCTIONS FOR CONTROLLING THE SPREAD OF **BATRACHOCHYTIRIUM DENDROBATIDIS**

(Chytrid fungus, fungal pathogen of amphibians)

([REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)])

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

**For Use on Hard, Nonporous Enclosures and Equipment:**

Use protective gloves and ventilate area.

1. Remove amphibians from area to be treated.
2. Mix 1 part of this product to 4 parts water (approximately 1.2% sodium hyphochlorite) (11,500 ppm).
3. Thoroughly clean and saturate surfaces for 5 minutes.
4. Rinse thoroughly with water before placing amphibians in enclosures or in contact with equipment.

Note: All water used for cleaning enclosures and equipment must be treated with the bleach solution to avoid rinsing the Chytrid fungus down the drain or contaminating other surfaces.

---

R0623100_SB
For Use on Field Equipment:
Any hard, nonporous equipment, including rubber boots, that comes into contact with water must be treated with bleach to prevent the fungal pathogen from spreading to clean sites (see instructions above). Care must be taken to avoid environmental contamination when disinfecting in the field.
Note: All water used for cleaning equipment must be treated with the bleach solution to avoid spreading the Chytrid fungus.

CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8)
FOR SANITATION IN CARE OF LIVESTOCK, HORSES, PETS
[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

TO CLEAN AND DISINFECT BARNES, STABLES, HUTCHES, KENNELS:
Remove all litter, loose dirt and debris. Mix 1 oz [powdered] detergent with each gallon of 3600 ppm available chlorine solution until detergent is dissolved*. Using the solution, thoroughly scrub or pressure-spray all exposed areas including floor, walls, ceiling posts and support beams. Let stand for [at least] 5 minutes. Rinse with clean, clear, cold water. Let area dry thoroughly before housing animals.

LOADING AND HAULING EQUIPMENT:
Loading chutes, trucks, trailers and other equipment for transportation of animals should be cleaned and disinfected prior to use. Pressure-spray or scrub with solution prepared by thoroughly mixing 1 oz [powdered] detergent with each gallon of 2700 ppm available chlorine solution*. Let stand for [at least] 5 minutes. Rinse with clean, clear, cold water. Allow to dry before use.

FEEDERS AND DRINKING WATER CONTAINERS - to clean and disinfect:
Thoroughly scrub or pressure-spray with solution of 1 oz [powdered] detergent mixed with each gallon of 3600 ppm available chlorine solution*. Let stand for [at least] 5 minutes. Rinse thoroughly with clear, cold water; allow to drain dry. (A solution of 1600 ppm available chlorine is effective in removing slime which sometimes forms on drinking water containers. DO NOT LET ANIMALS DRINK THIS SOLUTION.)

TO SANITIZE ANIMALS’ DRINKING WATER:
Prepare a 5 ppm available chlorine solution using clear water. Use in glass, plastic, porcelain or concrete containers daily. (See directions above.)

*For this product/detergent solution, use hot water if available.

HOG HOUSES AND FARROWING HOUSES - to clean and disinfect:

1. Remove loose dirt, litter and debris. Dirty or coated surfaces cannot be disinfected.
2. Mix 1 oz [powdered] detergent with each gallon of 3600 ppm available chlorine solution until detergent is dissolved.* Let stand for [at least] 5 minutes.
3. Scrub or pressure-spray all surfaces with this solution. Rinse with clear, cold water.
4. Allow to dry before housing pigs.
CLEAN AND DISINFECT METAL WATERING TROUGHS AND FEEDERS by pressure-spraying or scrubbing with solution prepared by thoroughly mixing 1 oz [powdered] detergent with each gallon of 3600 ppm available chlorine solution*. Let stand for [at least] 5 minutes. Rinse thoroughly with clear, cold water; drain dry. (Drinking troughs and feeders should be cleaned and disinfected before housing pigs, and as often as necessary to keep sanitary.)

TO SANITIZE DRINKING WATER: Prepare a 5ppm available chlorine solution using clear water. (Water containing suspended material is difficult to sanitize.)

NOTE: Clean metal surfaces can be sanitized using the above method. Wooden surfaces are difficult to sanitize by any method.

*For bleach/detergent solution, use hot water if available.

Use chlorine test strips to adjust to desired available chlorine level.

CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8) IN SANITATION OF RESTAURANTS AND TAVERNS
[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

An unclean kitchen and contaminated food can result in the spread of infectious disease. To help avoid this, it is important to keep all work surfaces, equipment and utensils hygienically clean. This product is a highly effective, economical and convenient germicide for this use in restaurants and taverns, as well as in the home.

TO SANITIZE WORK SURFACES (not utensils): After each use, scrub thoroughly with hot suds; rinse with clear, cold water. Then prepare a 200 ppm available chlorine sanitizing solution. Apply this solution 1 minute. Air dry.

DISINFECT WORK SURFACES (not utensils): After each use, scrub thoroughly with hot suds; rinse with clear, cold water. Then prepare a 3600 ppm available chlorine disinfecting solution. Apply this solution 5 minutes. Rinse with potable water. Air dry.

TO SANITIZE DISHES, GLASSWARE, UTENSILS: Wash thoroughly; then soak 1 minute in a 200 ppm available chlorine solution [made with hot water]. Use chlorine test strips to adjust to 200 ppm available chlorine. Drain dry. (Do not use on steel, aluminum, silver, or chipped enamel. Disinfect these by scalding.)

DISINFECTING SINK AND SANITIZING DISHCLOTH[S]: should be a routine follow-up to dishwashing. First wash sink and rinse dishcloth[s] in hot suds. Drain out sudsy water. Then fill with a 3600 ppm available chlorine solution. Let stand 5 minutes. Swish dishcloth[s] in this solution; then use it to wipe sides of sink. Soak dishcloth[s] for 1 minute in this solution. Then rinse sink and dishcloth[s] with clear water. Not approved for use in CA.

DISINFECTING SINK: Should be a routine follow-up to dishwashing. First wash sink and rinse dishcloth[s] in hot suds. Drain out sudsy water. Then fill with a 3600 ppm available chlorine solution. Let stand 5 minutes.

TO DEODORIZE DRAIN PIPES: Flush with very hot water followed by 3/4 cup of this product. Wait 5 minutes; flush out with clear water.

TO SANITIZE REFRIGERATORS: First wash inside surfaces. Then wipe with a 200 ppm available chlorine solution made with warm water. Let stand for [at least] 1 minute. Air dry. (Do not use on steel, aluminum, silver, or chipped enamel.)
ICE CREAM FREEZERS - to clean and sanitize: After using, flush with warm water until water runs clear. Scrub or pressure-spray with solution prepared by thoroughly mixing 1 oz [regular] [powdered] detergent with each gallon of 400 ppm available chlorine solution. Rinse thoroughly with clean, clear water; drain. Immediately before use, sanitize for 2 minutes with a 200 ppm available chlorine solution, drain thoroughly.

TO DISINFECT HARD, NONPOROUS FLOORS (plastic or ceramic tile): Prepare a 3600 ppm available chlorine solution. Mop or scrub. (Do not use on cork or linoleum.) Let stand 5 minutes. Rinse.

TO SANITIZE BRUSHES, MOPS AND BROOMS: After using brushes, mops and brooms, wash thoroughly; then soak for 5 minutes in a 2700 ppm available chlorine solution made with warm water. Rinse with clear water; dry. (Not recommended for cellulose sponge mops.)

TO SANITIZE PAILS AND DUSTPANS: Remove heavy dirt prior to cleaning. Wash with a 2700 ppm available chlorine solution. Let stand 5 minutes. Rinse with clear, cold water. Air dry.

TO DEODORIZE AND SANITIZE GARBAGE CANS: Remove heavy dirt with a cleaner. Rinse. Pour in a 2700 ppm available chlorine solution. Swab inside surfaces with this solution. Let stand 5 minutes. Rinse with clear water; dry.

NSF Designation D2 – This product is acceptable as a sanitizer for all surfaces not always requiring a rinse (D2) in and around food processing areas.

---

CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8)
FOR SANITIZING SOLUTIONS FOR EQUIPMENT AND UTENSILS
(REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach))

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Before using this product, food products and packaging materials must be removed from the room or kept protected.

Before they are treated with a bleach solution, the food processing equipment and utensils must be thoroughly washed and then rinsed with clear, cold water.

The bleach solution used for sanitizing should not exceed 200 ppm (parts per million) available chlorine. (Use chlorine test strips to adjust to 200 ppm available chlorine.) The bleach solution should be applied by spraying, soaking or scrubbing. Treated surfaces should remain wet for at least one minute.

A potable water rinse is not required, provided the equipment and utensils are adequately drained before they come into contact with food. Little or no residue should remain to adulterate or otherwise affect edible products.

NSF Designation D2 – This product is acceptable as a sanitizer for all surfaces not always requiring a rinse (D2) in and around food processing areas.
This product is a 6.15% sodium hypochlorite solution, containing approximately 5.84% available chlorine by weight. The purity of its ingredients and the carefully supervised process of its manufacture make this product a quality source of chlorine for water treatment in swimming and wading pools. This product is especially suitable for use in chlorinators as it is a liquid and has no insoluble particles. This product is widely used as a source of chlorine for swimming pool sanitation and does not have any adverse effects on materials used in pool construction including swimming pool liners.

For each new filling of your pool, use following initial dosages of this product.

<table>
<thead>
<tr>
<th>Swimming Pool Size in Gallons</th>
<th>Initial Dosage of this product</th>
<th>Swimming Pool Size in Gallons</th>
<th>Initial Dosage of this product</th>
</tr>
</thead>
<tbody>
<tr>
<td>5,000</td>
<td>2 3/4 cups</td>
<td>20,000</td>
<td>10 1/2 cups</td>
</tr>
<tr>
<td>6,000</td>
<td>3 1/4 cups</td>
<td>25,000</td>
<td>13 1/2 cups</td>
</tr>
<tr>
<td>8,000</td>
<td>4 1/4 cups</td>
<td>30,000</td>
<td>16 cups</td>
</tr>
<tr>

<td>35,000</td>
<td>19 cups</td>
</tr>
<tr>
<td>15,000</td>
<td>8 cups</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

NOTE: 2 cups = 1 pint; 4 cups = 1 quart; 16 cups = 1 gallon

To determine the volume of water in the pool when filled, figure 7 1/2 gallons of water for each cubic foot of pool capacity. Three and 1/4 cups of this product per 6,000 gallons of water will supply approximately 2 ppm (parts per million) available chlorine, but this may dissipate rather rapidly in new water depending on the general sanitation conditions of the pool. Repeat dosage as needed to obtain 0.6 to 1.0 ppm available chlorine. Use chlorine test strips to adjust to the desired concentration. **Do not re-enter into treated pools when available chlorine concentration is above 4 ppm due to risk of bodily harm.**

In chlorinating a swimming pool, mix the required amount of this product with 10 parts water and feed this solution through a chlorinator into the main water supply line to the pool. The feeding rate should be adjusted so the required quantity of this product will be added uniformly throughout the filling of the pool; or, if the water is circulated through a filter, this product should be added throughout one complete circulation. If this product cannot be fed into the main water supply line, mix 1/2 pint of this product with 5 gallons of water and scatter over a portion of the pool surface; repeat until the required amount of this product has been scattered over entire surface of the pool.

Check chlorine level in pool water at least daily with a pool testing set and add this product as needed to maintain 0.6 to 1.0 ppm available chlorine. One and 5/8 cups of this product per 6,000 gallons of water will supply approximately 1.0 ppm available chlorine. Frequency of application of this dosage will vary depending on number of people using the pool, weather conditions (sunlight exposure) and general cleanliness of the pool area. Chlorine level for acid-stabilized pools should be maintained at 1.0 to 1.5 ppm available chlorine.
Every 7 days, or as necessary, superchlorinate the pool with 100-200 oz. of product for each 10,000 gallons of water to yield 5 to 10 ppm available chlorine by weight. Check the level of available chlorine with a test kit. Do not reenter pool until the chlorine residual is between 1 to 3 ppm.

The effectiveness of the chlorine is best when the pool water has a pH range of 7.2 to 7.6. The pH of the pool water should be checked daily using a pool pH testing set and adjusted as necessary.

The regular use of this product, in the above proportions, in the swimming pool usually prevents the growth of algae in the water; however, if algae growth is causing the pool water to look cloudy and uninviting, it may be corrected by doubling the initial dosage of this product for a few treatments. This additional product should be added to the pool in the evening after the pool is out of use so the excess chlorine will be dissipated before the pool is used again.

If algae are growing on the bottom or walls of the pool, scrub pool with a solution of 7 cups of this product to 5 gallons of water applying solution with a fiber brush. The pool should be scrubbed while wet and rinsed off when algae growth has been removed; all of the growth and dirty solution should be flushed from the pool with clear water before the pool is refilled.

Avoid skin contact with undiluted product; if such contact occurs, rinse immediately with water. When added as recommended, this product has no deleterious effects on the eyes, nasal passages, or skin of people using the pool and will have no effect on swimming apparel.

---

**CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8) FOR WADING POOL DISINFECTION**

**[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

This product - a 6.15% sodium hypochlorite solution containing approximately 5.84% available chlorine by weight - is a convenient, economical source of chlorine for water treatment in swimming and wading pools. Also, because this product is a liquid with no insoluble particles, it is especially suitable for this use.

In chlorinating wading pools, use 1/8 cup per 100 gallons of new water. Mix required amount of this product with 2 gallons of water and scatter over surface of pool. Mix uniformly with pool water.

Do not reenter pool until the chlorine residual is between 1 to 3 ppm.

**Do not re-enter into treated pools when available chlorine concentration is above 4 ppm due to risk of bodily harm.**

Empty small pools daily. (This product will not harm plastic pools.)

The chart below is a guide to the amount of this product to add to various sized round pools. One-eighth cup of this product should be added to every 100 gallons of pool water.

**Pool Diameter**

Stabilized pools should maintain a residual of 1.0 to 1.5 ppm available chlorine. Test the pH, available chlorine residual and alkalinity of the water frequently with appropriate test kits. Frequency of water treatment will depend upon temperature and number of swimmers.

CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8)
FOR BACTERICIDAL EFFICACY
[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

This product, when used as directed below, is effective against the following bacteria:

**Gram positive bacteria** including:
- Staphylococcus aureus [(Staph)] [ATCC 6538]
- Streptococcus pyogenes [(Strep)] [ATCC 9342]
- Methicillin resistant Staphylococcus aureus [(MRSA)] [ATCC 33592]
- Streptococcus pneumoniae [(Strep)] [ATCC 6305]

**Gram negative bacteria** including:
- Acinetobacter baumannii [ATCC 15308]
- Salmonella enterica [ATCC 10708] *(tested as Salmonella choleraesuis)*
- Pseudomonas aeruginosa [(Pseudomonas)] [ATCC 15442]
- Escherichia coli O157:H7 [(E. coli)] [ATCC 35150]
- Legionella pneumophila [(Legionella)] [ATCC 33153]
- Shigella dysenteriae [(Shigella)] [ATCC 13313]
- Vancomycin resistant Enterococcus faecalis [(VRE)] [ATCC 51299]

**Directions for use:**

**Hard Nonporous Surfaces:**
To disinfect hard nonporous surfaces, first clean surface by removing gross filth (loose dirt, debris, food materials, etc.). Prepare a 3600 ppm available chlorine solution. Thoroughly wet surface with the solution and allow it to remain on the surface for 5 minutes. Rinse with clean water and dry.

**TO SANITIZE GARBAGE CANS/DIAPER PAILS:** Preclean garbage can/diaper pail with a cleaning product prior to sanitization. Rinse with water and drain. Pour in 2700 ppm available chlorine solution. Let stand [at least] 5 minutes. Rinse and air dry.

**Toilet Bowls:** Flush toilet to remove gross filth. Add 1 cup of this product to the bowl and brush surfaces thoroughly, making sure to get under the rim. Let stand 5 minutes before flushing again.

**Use Sites**
This product can be used on hard nonporous surfaces in commercial, institutional, hospital and premises (including kitchens, bathrooms, nurseries, sick rooms, laundry rooms), eating establishments, pet kennels and veterinary premises.
This product, when used as directed below, is effective against Mycobacterium bovis.

**Directions for use:**
Hard Nonporous Surfaces:
To disinfect hard nonporous surfaces, first clean surface by removing gross filth (loose dirt, debris, food materials, etc.). Prepare a 5000 ppm available chlorine solution. Thoroughly wet surface with the solution and allow it to remain in contact with the surface for 5 minutes. Rinse with clean water and dry.

**Use Sites**
This product can be used on hard nonporous surfaces in commercial, institutional, hospital and premises (including kitchens, bathrooms, nurseries, sick rooms, laundry rooms), eating establishments, pet kennels and veterinary premises.

---

**CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8) VIRUCIDAL EFFICACY**

[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

‡This product, when used as directed below, is effective against the following viruses on hard, nonporous, inanimate surfaces:

- Adenovirus [type 2] [ATCC VR-846]
- [Human] Hepatitis B [Virus] [(HBV)] [(as duck HBV)]
- [Strain DHBV16]*
- Human Immunodeficiency Virus Type 1 [(RF Strain)] [(HIV-1)]*
- [Type 1] [HIV-1 Associated with AIDS]†
- Respiratory syncytial virus [(RSV)] [ATCC VR-26]
- Herpes simplex virus [type 2] -or- [Human] Herpesvirus [type 2]
  [ATCC VR-734] [(Strain G)]
- Rubella virus [ATCC VR-315]
- Feline parvovirus [ATCC VR-648]**
- Avian Influenza A [ATCC VR-2072]
- Norovirus -or- Norwalk virus [(as Feline Calicivirus)] [ATCC VR-782]

- [Human] Hepatitis C [Virus] [(HCV)] [(as bovine viral diarrhea virus)] [ATCC VR-1422]*
- Parainfluenza [type 1] [(Strain Sendai)] [ATCC VR-907]
- Rotavirus [(Strain WA)] [ATCC VR-2018]†
- Cytomegalovirus [ATCC VR-578]
- Influenza A [Influenza A2] [(Flu Virus)] [(Strain Hong Kong)] [(representative of the common flu virus)] [ATCC VR-544]
- Varicella zoster virus [ATCC VR-586]
- Rhinovirus [type 17] [ATCC VR-1147]
- Canine parvovirus [ATCC VR-953]**
- Human Coronavirus [ATCC VR-740]
Directions for use:

Hard Nonporous Surfaces:

To disinfect hard nonporous surfaces, first clean surface by removing gross filth (loose dirt, debris, food materials, etc.). Prepare a 3600 ppm available chlorine solution. Thoroughly wet surface with the solution and allow it to remain in contact with the surface for 5 minutes. Rinse with clean water and dry.

* see directions in the Clorox Service Bulletin entitled “Special Instructions for Using CPPC ULTRA BLEACH 2 to Clean and Decontaminate Against HIV, HBV and HCV on Surfaces/Objects Soiled with Blood/Body Fluids”
**For Canine and Feline parvovirus use the same instructions as above but keep the solution in contact with the surface for 10 minutes.
† Keep the solution in contact with the surface for 2 minutes.

TO SANITIZE GARBAGE CANS/DIAPER PAILS: Preclean garbage can/diaper pail with a cleaning product prior to sanitization. Rinse with water and drain. Pour in 2700 ppm available chlorine solution. Let stand [at least] 1 minute. Rinse and air dry.

Toilet Bowls: Flush toilet to remove gross filth. Add 1 cup of this product to the bowl and brush surfaces thoroughly, making sure to get under the rim. Let stand 5 minutes before flushing again.

Use Sites

This product can be used on hard nonporous surfaces in commercial, institutional, hospital and premises (including kitchens, bathrooms, nurseries, sick rooms, laundry rooms), eating establishments, pet kennels and veterinary premises.
Special Instructions for Using CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8)

**to Clean and Decontaminate Against HIV, HBV†† and HCV†† on Surfaces/Objects Soiled with Blood/Body Fluids**

[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

This product kills HIV-1, HBV and HCV on precleaned environmental surfaces/objects previously soiled with blood/body fluids in health care settings (e.g. hospitals, nursing homes) or other settings in which there is an expected likelihood of soiling of inanimate surfaces/objects with blood or body fluids, and in which the surfaces/objects likely to be soiled with blood or body fluids can be associated with the potential for transmission of Human Immunodeficiency Virus Type 1 (HIV-1) (associated with AIDS), [Human] Hepatitis B Virus (HBV) and [Human] Hepatitis C Virus (HCV).

**Personal Protection:** When handling items soiled with blood or body fluids, use disposable latex gloves, gowns, masks, and eye coverings.

**Cleaning Procedure:** Blood and other body fluids must be thoroughly cleaned from surfaces and other objects before applying this product.

**Dilution and Contact time:** Prepare a 3600 ppm available chlorine solution and spray or flood surface; let stand 2 minutes [for HIV]. Let stand 5 min for HBV/HCV.

**Disposal of infectious materials:** Use disposable latex gloves, gowns, masks, and eye coverings. Blood and other body fluids should be autoclaved and disposed of according to local regulations for infectious waste disposal.

†† 5 min

---

**CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8) FOR FRUIT & VEGETABLE WASHING**

[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Thoroughly clean all fruits and vegetables in a wash tank. Prepare a sanitizing solution of 25 ppm available chlorine. After draining the tank, submerge fruit or vegetables for 2 minutes in a second wash tank containing the recirculating sanitizing solution. Spray rinse vegetables with the sanitizing solution prior to packaging. Rinse fruit with potable water only prior to packaging.

**NSF Category Code:** 3D-Substances for washing fruits and vegetables
CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8) CANDIDA ALBICANS EFFICACY

[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Directions for use:

Hard Nonporous Surfaces:
To disinfect hard nonporous surfaces, first clean surface by removing gross filth (loose dirt, debris, food materials, etc.) Prepare a solution of 3600 ppm available chlorine solution. Thoroughly wet surface with the solution and allow it to remain in contact with the surface for 5 minutes. Rinse with clean water and dry.

TO SANITIZE DIAPER PAILS: Preclean diaper pails with a cleaning product prior to sanitization. Rinse with water and drain. Pour in 2700 ppm available chlorine solution. Let stand [at least] 5 minutes. Rinse and air dry.

Use Sites
This product can be used on hard nonporous surfaces in commercial, institutional, hospital and premises (including kitchens, bathrooms, nurseries, sick rooms, laundry rooms), eating establishments, pet kennels and veterinary premises.

CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8)
FOR DISINFECTION USES (2400 PPM FOR 1 MINUTE) [(SPRAY APPLICATIONS)]
[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

This product can be diluted and spray applied for convenient broad spectrum disinfection of hard, nonporous surfaces in homes, hospitals, commercial, institutional, and eating establishments.

Directions for use:
Hard Nonporous Surfaces:
To disinfect hard nonporous surfaces, first clean surface by removing gross filth (loose dirt, debris, food materials, etc.). Spray surface using a coarse spray with 2400 ppm available chlorine solution until thoroughly wet. Allow it to remain on the surface for 1 minute. Rinse and dry.

To ensure [sodium] hypochlorite [bleach] stability, prepare solutions daily.
CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8)  
FOR DISINFECTION USES (800 PPM FOR 2 MINUTES) [(SPRAY APPLICATIONS)]  
[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

This product can be diluted and spray applied for convenient broad spectrum disinfection of hard, nonporous surfaces in homes, hospitals, commercial, institutional, and eating establishments.

**Directions for use:**

**Hard Nonporous Surfaces:**

To disinfect hard nonporous surfaces, first clean surface by removing gross filth (loose dirt, debris, food materials, etc.) Spray surface using a coarse spray with 800 ppm available chlorine solution until thoroughly wet. Allow it to remain on the surface for 2 minutes. Rinse and dry.

To ensure [sodium] hypochlorite [bleach] stability, prepare solutions daily.

**USE CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8)  
IN SANITIZING CYCLE OF CHEMICAL SANITIZING DISHWASHING MACHINES  
[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

This product is an approved sanitizing agent for use in the sanitizing cycle of chemical sanitizing dishwashing machines.

**Usage Directions**

1. Hook up a bottle of this product to the automatic bleach dispensing system of the chemical sanitizing dishwashing machine. If the bottle is already in place, make sure that sufficient product remains in the bottle to complete the dishwashing job.

2. Wash tableware in the machine following the manufacturer's operating instructions.

3. After the washing/rinsing/sanitizing cycles are completed, remove the dishwashing rack. Let stand 2 minutes. Allow the tableware to air dry.

**Please Note:** Do not sanitize silverware or pewter with this product as these metals may darken.

**Bleach Dispensing System Adjustments**

The following steps must be followed before using the new chemical sanitizing dishwashing machine, and on a regular basis thereafter:

a. Start machine and let run until the machine has begun the final rinse cycle.

b. Take a sample of the rinse water.
c. Using a special test kit, determine the part per million (ppm) of available chlorine in the sample.

d. If the ppm of available chlorine is lower than the minimum or higher than the maximum level of available chlorine permitted by local public health authorities, adjust the bleach dispensing system.

e. Repeat steps “a” through “c” until a correct ppm of available chlorine is achieved.

Your equipment service representative or dishwashing detergent supplier will often make these adjustments for you.

Correct Chlorine Concentration
Local public health codes vary with regard to the parts per million of available chlorine permitted in the final rinse water of chemical sanitizing dishwashing machines. The minimum level is 50 ppm of available chlorine with a maximum level of 200 ppm, although some states require 100 ppm minimum level. Check with your local public health department on the applicable regulations for your area.

---

**CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8)**

**PLANT PARASITIC NEMATODES AND PLANT DISEASE-CAUSING FUNGI QUARANTINE USE DIRECTIONS**

[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

**Crop/Site/Commodity:**
1. Walks, benches, tools, plant containers in nurseries and other quarantine areas.
2. Farm equipment and machinery.
3. Laboratory work areas, equipment and specimens.
4. Deciduous fruit tree nursery stock (dormant)

**Target Pest/Problem:**
Plant parasitic nematodes, plant disease-causing fungi and for general surface disinfection.

**Dosage:**
See dilution rate.

**Dilution Rate:**
Six parts water with one part this product (equals approximately 0.85% active ingredient).

**Laboratory work areas, equipment and specimens:** Prepare a solution of five or six parts water to one part product. Scrub areas and implements thoroughly, then wipe or allow to dry naturally. It is advisable that workers doing the treatment wear waterproof gloves. Small tools or implements, and other items covered above may be immersed for five to ten minutes in the solution instead of scrubbing manually. Wipe off plant tissue or soak tissue in the solution.

**Deciduous Fruit Tree Nursery Stock:**
Five or six parts water with one part product (equals approximately 0.85% to 1.0% active ingredient).
Method of Application:
   Drench and dip method.

   Deciduous Fruit Tree Nursery Stock:
   1. Thoroughly clean all soil from roots.
   2. Dip entire tree root system in solution for 30 to 45 seconds.
   3. Immediately rinse tree root system with clean water upon removal from dip solution.

Frequency/Timing of Application:
   As needed.

   Deciduous Fruit Tree Nursery Stock:
   One application at harvest (tree-digging period)

Field Reentry After Application:
   Not applicable.

Preharvest Interval:
   Not applicable.

Other Requirements:
   Do not apply through any type of irrigation system.

   Deciduous Fruit Tree Nursery Stock:
   Workers required to wear eye protection and waterproof gloves.
Dilution Rate:
Mix 1 part this product to 3 parts water (equals approximately 1.5% active ingredient).

Method of Application:
Before treating remove all soil and plant debris. The dilute solution of sodium hypochlorite will be used to wet the point of runoff surfaces potentially exposed to the pathogen. Saturate any soil removed by the treatment with the solution. It is recommended that the equipment or site be thoroughly washed down with clean water after 15 minutes to minimize corrosion.

Crop/Site/Commodity:
Wheat and triticale germplasm for research or seed increase use. Commodities may not be used for food, feed or oil purposes.

Target Pest/Problem:
Karnal bunt (Tilletia indica)

Dosage:
See dilution rate.

Dilution Rate:
Mix 1 part this product to 3 parts water (equals approximately 1.5% active ingredient) with 2mL/L Tween added.

Method of Application:
Treat seed with the dilute solution and agitate for 10 minutes at room temperature. Follow seed treatment by a 15 minute rinse with clean, running water, then drying of the seed.

Additional Restrictions, User Precautions and Requirements:
Be sure treated surfaces are dry before handling. Protective impervious gloves and safety goggles should be worn when mixing this disinfectant. Protective impervious gloves should be worn while handling or using the dilute mixture. Do not ingest product. Do not breathe vapor or mist. Do not get in eyes, on skin, or on clothing. Store away from flammable materials. Keep containers tightly closed. Wash thoroughly after handling. Use only with adequate ventilation.

CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8)
FOR CONTROLLING THE SPREAD OF PHYTOPHTHORA RAMORUM [CAUSE OF SUDDEN OAK DEATH] IN FORESTS
[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

When used as directed, this product is effective in controlling the spread of the invasive pathogen Phytophthora ramorum in forests. P. ramorum causes a fatal canker disease of several tree species and damages many other plant species.

Water is commonly drafted from streams and fire ponds within forested areas to use in dust abatement on forest roads, equipment cleaning and fire suppression. The use of infested water sources can spread P. ramorum to uninfested areas. Treating water prior to use helps control the spread of this pathogen.

Directions for Use: Add 1 gallon of this product to 1000 gallons (~50 ppm available chlorine) of drafted water. Prepare the mixture at least 5 minutes prior to application for dust abatement, fire suppression, and cleaning vehicles and logging, road building, and maintenance equipment.
CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8) FOR EMERGENCY DISINFECTION AFTER MAIN BREAKS

[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Mains
Before assembly of the repaired section, flush out mud and soil. Permit water flow of at least 2.5 feet per minute to continue under pressure while injecting this product by means of a hypochlorinator. Stop water flow when a chlorine residual test of 50 ppm is obtained at the low pressure end of the new main section after a 24 hour retention time. When chlorination is completed, the system must be flushed free of all heavily chlorinated water.

CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8) FOR DISINFECTION OF DRINKING WATER (POTABLE)

(Public Systems)

[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Public System
Mix a ratio of this product to water to produce a 10 ppm available chlorine by weight. Begin feeding this solution with a hypochlorinator until a free available chlorine residual of at least 0.2 ppm and no more than 0.6 ppm is attained throughout the distribution system. Check water frequently with a chlorine test kit. Bacteriological sampling must be conducted at a frequency no less than that prescribed by the National Interim Primary Drinking Water Regulations. Contact your local Health Department for further details.

CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8) FOR EMERGENCY DISINFECTION AFTER DROUGHTS

[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

A. Supplementary Water Supplies
Gravity or mechanical hypochlorite feeders should be set up on a supplementary line to dose the water to a minimum chlorine residual of 0.2 ppm after a 20 minute contact time. Use a chlorine test kit.

B. Water shipped in By Tanks, Tank Cars, Trucks, etc.
Thoroughly clean all containers and equipment. Spray a 500 ppm available chlorine solution and rinse with potable water after 5 minutes. During the filling of the containers, dose with sufficient amounts of this product to provide at least a 0.22 ppm chlorine residual. Use a chlorine test kit.

CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8) FOR EMERGENCY DISINFECTION AFTER FIRES

[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Cross Connections or Emergency Connections
Hypochlorination or gravity feed equipment should be set up near the intake of the untreated water supply. Apply sufficient product to give a chlorine residual of a least 0.1 to 0.2 ppm at the point where the untreated supply enters the regular distribution system. Use a chlorine test kit.
Wells
Thoroughly flush contaminated casing with a 500 ppm available chlorine solution. Backwash the well to increase yield and reduce turbidity, adding sufficient chlorinating solution to the backwash to produce a 10 ppm available chlorine residual, as determined by a chlorine test kit. After the turbidity has been reduced and the casing has been treated, add sufficient chlorinating solution to produce a 50 ppm available chlorine residual. Agitate the well water for several hours and take a representative water sample. Re-treat well if water samples are biologically unacceptable.

CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8) FOR ASPHALT OR WOOD ROOFS AND SIDINGS
[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

To control fungus and mildew, first remove all physical soil by brushing and hosing with clean water. Apply a 5000 ppm available chlorine solution by brushing or spraying roof or siding. After 30 minutes, rinse by hosing with clean water.

CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8) FOR SPAS, HOT TUBS, IMMERSION TANKS
[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]

A. Spas/Hot-Tubs: Using a dilution chart or formula, calculate an approximate amount of product per 1000 gallons of water to obtain a free available chlorine concentration of 5 ppm, as determined by a suitable chlorine test kit. Adjust and maintain pool water pH to between 7.2 and 7.8. Some oils, lotions, fragrances, cleansers, etc. may cause foaming or cloudy water as well as reduce the efficiency of the product.

1. Maintaining the Water: To maintain the water, apply the product solution over the surface to maintain a chlorine concentration of 5 ppm.
2. After Each Use: Shock treat to control odor and algae, using the product at a rate of 1 3/4 cups to 500 gallons of water.
3. Periods of Disuse: During periods of disuse, add product daily to maintain a 3 ppm chlorine concentration.
4. Do not re-enter into treated spas/hot tubs when available chlorine concentration is above 5 ppm due to risk of bodily harm.

B. HUBBARD AND IMMERSIONS TANKS (Not approved for use in the State of California): Before patient use, add product to obtain a chlorine residual of 25 ppm, as determined by a suitable test kit. Adjust and maintain the water pH to between 7.2 and 7.6. After each use, drain the tank. Add 10 ounces of product to a bucket of water and circulate this solution through the agitator of the tank for 15 minutes and then rinse out the solution. Clean tank thoroughly and dry with clean cloths.

C. HYDROTHERAPY TANKS: Add product to the water to obtain a chlorine residual of 1 ppm as determined by a suitable chlorine test kit. Pool should not be entered until the chlorine residual is below 3 ppm. Adjust and maintain the water pH to between 7.2 and 7.6. Operate pool filter continuously. Drain pool weekly, and clean before refilling.
CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8) FOR WATER DISINFECTION
[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Individual Systems
1. DUG WELLS: Upon completion of the casing (lining), wash the interior of the casing (lining) with a 100 ppm available chlorine solution using a stiff brush. After covering the well, pour the sanitizing solution into the well through both the pipesleeve opening and the pipeline. Wash the exterior of the pump cylinder also with the sanitizing solution. Start pump water until strong odor of chlorine in water is noted. Stop pump and wait at least 24 hours. After 24 hours flush well until all traces of chlorine have been removed from the water. Consult your local Health Department for further details.

Individual Water Systems
1. DRILLED, DRIVEN AND BORED WELLS: Run pump until water is as free from turbidity as possible. Pour a 100 ppm available chlorine sanitizing solution into the well. Add 5 to 10 gallons of clean, chlorinated water to the well in order to force the sanitizer into the rock formation. Wash the exterior of pump cylinder with the sanitizer. Drop pipeline into well, start pump and pump water until strong odor of chlorine in water is noted. Stop pump and wait at least 24 hours. After 24 hours flush well until all traces of chlorine have been removed from the water. Deep wells with high water levels may necessitate the use of special methods for introduction of the sanitizer into the well. Mix well [(2 drops to 1 quart)]. Consult your local Health Department for further details.
2. FLOWING ARTESIAN WELLS: Artesian wells generally do not require disinfection. If analysis indicates persistent contamination, the well should be disinfected. Consult your local Health Department for further details.

Emergency Disinfection
When boiling of water for 1 minute is not practical, water can be made potable by using this product. Prior to addition of the sanitizer, remove all suspended material by filtration or by allowing it to settle to the bottom. Decant the clarified contaminated water to a clean container and add 8 drops of this product to 1 gallon of water [(2 drops to 1 quart)], or 1 teaspoon or 1/2 capful to 10 gallons of water. Allow the treated water to stand for 30 minutes. Properly treated water should have a slight chlorine odor. If not, repeat dosage and allow the water to stand an additional 15 minutes. The treated water can then be made palatable by pouring it between clean containers for several times.

For cloudy water, use 16 drops of this product to 1 gallon of water [(4 drops to 1 quart)], or 2 teaspoons or 1 capful to 10 gallons of water. If no chlorine odor is apparent after 30 minutes, repeat dosage and wait an additional 15 minutes.

CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8) FOR:
[REGISTERED AS (Clorox Commercial Solutions Ultra Clorox Germicidal Bleach)]
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

CROP/SITE: ASPARAGUS SEED TREATMENT
Target Pest/Problem: To aid in the prevention of asparagus root rot (Fusarium oxysporium and F. asparagi)
Dosage: 5000 ppm available chlorine solution.
Dilution or Application Rate: Use 1 gallon of solution per pound of seed.
Method of Application:
Wash seed in solution for 40 minutes, providing continuous agitation. After washing seed, spread and air dry.

Frequency/Timing of Applications:
1 application.

Preharvest Interval:
Preplant treatment.

Other Requirements:
Do not use treated seeds for food or feed. Allow to dry before storing, planting, or treating with other chemicals. Prepare fresh solution for each batch of seed.

CROP/SITE: PEPPER SEED TREATMENT

Target Pest/Problem:
To aid in the prevention of bacterial spot (*Xanthomonas vesicatoria*).

Dosage:
10,000 ppm available chlorine solution.

Dilution or Application Rate:
Use 1 gallon of solution per pound of seed.

Method of Application:
Wash seed in solution for 40 minutes, providing continuous agitation. After washing seed, spread to air dry.

Frequency/Timing of Application:
1 application.

Preharvest Interval:
Preplant treatment.

Other Requirements:
Do not use treated seed for food or feed. Allow to dry before storing, planting, or treating with other chemicals. Prepare fresh solution for each batch of seed.

CROP/SITE: TOMATO SEED TREATMENT

Target Pest/Problem:
To aid in the control of bacterial canker (*Corynebacterium michiganense*) and *tobacco mosaic virus* (TMV).

Dosage:
10,000 ppm available chlorine solution.

Dilution or Application Rate:
Use 1 gallon solution per pound of seed.

Method of Application:
Wash seed in solution for 40 minutes, providing continuous agitation. After washing seed, spread to air dry.
Frequency/Timing of Application:
1 application.

Preharvest Interval:
Preplant treatment.

Other Requirements:
Do not use treated seed for food or feed. Allow to dry before storing, planting, or treating with other chemicals. Prepare fresh solution for each batch of seed.

CROP/SITE: RICE SEED TREATMENT

Target Pest/Problem:
To aid in surface sterilization of rice seed for prevention of bakanae disease *Fusarium fujikuroi* [syn *F. moniliforme*] -or- *Gibberella fujikuroi*

Dosage:
3000 ppm available chlorine solution.

Dilution or Application Rate:
5 gallons of solution per 95 gallons water.

Method of Application:
Using a thoroughly pre-mixed solution, soak seed for two hours then drain solution and replace with fresh water. Continue seed soaking and draining as usual. Do not apply undiluted product directly to seed.

Dosage:
1500 ppm available chlorine solution.

Dilution or Application Rate:
2.5 gallons solution per 97.5 gallons of water.

Method of Application:
Using a thoroughly pre-mixed solution, soak and drain seed as usual (no rinse required). Do not apply undiluted product directly to seed.

Frequency/Timing of Applications:
1 application during preplant soaking of seed.

Pre-harvest Interval:
Preplant treatment.

Other Requirements:
Do not use treated seeds for food or feed. Prepare fresh solution for each batch of seed.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Applicators and other handlers must wear coveralls worn over long-sleeved shirt and long pants, chemical-resistant footwear, chemical-resistant gloves made of any waterproof material, rubber boots plus socks and protective eyewear.
Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

**ENGINEERING CONTROLS STATEMENTS**

When handlers use closed systems, enclosed cabs or aircraft in a manner that meets the requirements listed in the worker protection standard (WPS) for agricultural pesticides [40 CFR 170.240 (d) (4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS. **IMPORTANT:** When reduced PPE is worn because a closed system is being used, handlers must be provided all PPE specified above for “applicators and other handlers” and have such PPE immediately available for use in an emergency, such as a spill or equipment break-down.

THIS LABEL MUST BE IN POSSESSION OF THE USER.

REFER TO THE MAIN LABEL FOR ADDITIONAL PRECAUTIONARY STATEMENTS.

**USER SAFETY RECOMMENDATIONS**

**USERS SHOULD:**
Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.

Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

**AGRICULTURAL USE REQUIREMENTS**

Use this product only in accordance with its labeling and with the worker protection standard, 40 CFR, part 170. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the worker protection standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 24 hours.

PPE required for early entry to treated areas that is permitted under the worker protection standard and that involves contact with anything that has been treated, such as plants, soil, or water, is: coveralls worn over long-sleeved shirt and long pants, chemical-resistant footwear, chemical-resistant gloves made of any waterproof material, rubber boots plus socks, and protective eyewear.
When used as directed, this product is effective in controlling the spread of the fatal fungus *Phytophthora lateralis* [Port Orford Cedar Root Disease] in areas of California and Oregon where Port Orford Cedar (*Chamaecyparis lawsoniana*) grows.

Water is commonly drafted from streams and fire ponds within forested areas to use in dust abatement on forest roads, equipment cleaning and for fire suppression. The water source can spread the root disease fungus to uninfested areas. Treating water prior to use helps control the spread of the fungus.

**Directions for Use:** Add 1 gallon of this product to 1000 gallons (~50 ppm available chlorine) of drafted water. Prepare the mixture at least 5 minutes prior to application dust abatement, fire suppression and cleaning trucks, and logging, road building and maintenance equipment.

---

**CPPC ULTRA BLEACH 2 (EPA Reg. No. 67619-8)**

**SOUTHERN SEAOAT SEEDS (** *UNIOLA PANICULATA* **)**

*It is a violation of Federal law to use this product in a manner inconsistent with its labeling.*

**CROP/SITE TREATMENT**

**Crop/Site/Commodity:**

*Southern seaoat seeds* (*Uniola Paniculata*)

**Target Pest/Problem:**

*Plant disease-causing bacteria and fungi*

**Dilution of Product:**

1 part product to 1.28 parts water (27,000 ppm)

**Method of Application:**

Soak seeds in solution for 15 minutes, rinse with tap water and allow to dry at 21°C (70°F) for 30 minutes. Store in cool dry location prior to germination.

**Frequency/Timing of Application:**

Treat seeds prior to germination

**Precautions:**

As sodium hypochlorite is corrosive to many metals, chains and other machine parts should be either plastic or plastic coated and should be rinsed with clear water after use of product. Do not mix full-strength product or treatment solution with any other agricultural chemical, ammonia, or acid. Avoid prolonged contact of product with skin. Do not ingest product or breathe vapors. Keep containers tightly closed. Use only with adequate ventilation. Wear safety glasses. If full strength or diluted product is splashed in the eyes, flush with water. Wash thoroughly after handling.

**NOTE:**

DO NOT USE TREATED SEED FOR FOOD OR FEED. Use bleach treatment only on crops and for the purposes recommended. Apply only as specified above.
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

To obtain a solution with an approximate available chlorine level (parts per million), thoroughly mix the indicated amounts of this product and water. Chlorine test strips should be used to adjust to the desired available chlorine level. Always test to ensure efficacy.
