½ oz. (1-2 level tablespoons) of bait at 8- to 12-foot intervals. Maintain an uninterrupted supply of fresh bait for at least 15 days or until signs of mouse activity cease.

SELECTION OF TREATMENT AREAS:
Determine areas where rats and/or mice will most likely find bait. Generally, these areas are along walls, by gnawed openings, in or beside burrows, in corners and concealed places, between floors and walls, or in locations where rodents or their signs have been observed. Protect bait from rain or snow. Remove as much alternative food as possible.

APPLICATION DIRECTIONS: Wear waterproof gloves.
Norway and Roof Rats: Place ¼ to ½ oz. of bait per placement. Place bait at 15- to 30-foot intervals. Larger placements (up to 2 oz.) may be needed at points of very high mouse activity. Maintain an uninterrupted supply of fresh bait for at least 15 days or until signs of mouse activity cease.

Follow-up: Replace contaminated or spoiled bait immediately. Wearing waterproof gloves, collect and dispose of all dead rodents and leftover bait properly. To prevent reinfestation, limit sources of food and other suitable living conditions. If on skin or clothing:
• Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15–20 minutes.
• Call a poison control center, doctor, or 1-800-498-5743 immediately for treatment advice.

NOTE TO PHYSICIAN: If swallowed, this material may reduce the clotting ability of the blood and cause bleeding. If ingested, administer Vitamin K₁ intramuscularly or orally. Repeat as necessary based on monitoring of prothrombin times.
