RED AND BLACK INSECTICIDE

ENVIRONMENTAL HAZARDS

Do not apply more than 80 lb (0.4 lb of active ingredient) per acre per year.

Restrictions: Move the active ingredient into the soil. Make application prior to anticipated pest infestation to achieve optimum levels of control. Optimum control will be achieved when applications are followed by sufficient mechanical incorporation, irrigation, or rainfall to move the active ingredient through the thatch. In golf courses, irrigate treated areas following application. Avoid mowing turf or lawn area until incorporation or distribution of the active ingredient has occurred as that uniform and optimum activity for treatment where

RESTRICTIONS

Do not apply PROKOZ ZENITH 0.5 G Insecticide to areas which are waterlogged or saturated, which will not allow penetration and ground cover control. For optimum control, if rainfall does not occur within 24 hours after application, irrigate to move the active ingredient through the thatch. On golf courses, irrigate treated areas following application. Avoid mowing turf or lawn area until incorporation or distribution of the active ingredient has occurred as that uniform and optimum activity for treatment when

APPLICATION EQUIPMENT

Apply PROKOZ ZENITH 0.5 G Insecticide uniformly over the area being treated with normally used and properly applied equipment. Both-drop and rotary-type sprayers may be used to apply PROKOZ ZENITH 0.5 G Insecticide. Do not use sprayers that are capable of applying the material in concentrated bands. Avoid placing equipment so that the use is according to the manufacturer's directions. Check frequently to be sure equipment is working properly and distributing granules uniformly and accurately.
