PRECAUTIONARY STATEMENT
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
DANGER. Causes irreversible eye damage. Causes skin burns. Do not get in eyes or on clothing. Harmful if swallowed. Harmful if inhaled. Avoid breathing vapor or aerosol mist. Wash thoroughly after handling and before eating, drinking, using tobacco products or using the toilet. Do not eat, drink, or use tobacco products during those parts of the application process that may involve exposure to this product or its treatment solutions.

PERSONAL PROTECTION EQUIPMENT (PPE):
Masks, lenses, clothing, and other handlers (including persons who enter pressure-treatment chambers) must wear. Overall cover worn over long-sleeved shirt and long pants. Chemicaresistant gloves should be worn. Gloves made of barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, and polychloroethylene. Goggles and face shield, and a chemical-resistant apron when mixing, loading or cleaning equipment.

In addition, individuals who enter pressure-treatment chambers must wear properly fitting, well-maintained, high-efficiency respirators. MSHA approved for ammonia. Theleave of ammonia in the plant is unknown, or exceeds the short-term exposure limit (STEL) of 30 ppm, or the 8-hour time weighted average of 25 ppm recommended by OSHA. Air monitoring programs, procedure and record retention must be conducted in accordance with OSHA standards.

USER SAFETY REQUIREMENTS
Follow the manufacturer’s instructions for drying/steaming/peeling. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry. Do not allow clothing and other absorbent materials that have been soiled or heavily contaminated with the product’s concentrate to dry.

Do not reuse them. Users must wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet. Users must remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing. Users must remove PPE immediately after handling this product. As soon as possible, wash thoroughly and change into clean clothing. Wash the outside of gloves before removing.

ENVIRONMENTAL HAZARDS:
This pesticide is toxic to fish and aquatic invertebrates and may contaminate water through runoff. This product has a potential for runoff for several months or more after application. Poorly drained soils and soils with shallow water tables are more prone to produce runoff that contains this product. For irrigation uses, do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment, washwaters, or rinsates. Certain water conditions including pH (pH 5.5, low dissolved organic carbon (DOC) levels (0.5 mg/L or lower), and “soft” waters (pH alkalinity less than 50 mg/L), increases the potential acute toxicity to non-target aquatic organisms. Do not discharge effluent containing this product into lakes, streams, ponds, swamps, oceans or other waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting agency has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment authority.

For guidance, contact your local State Water Board or Regional Office of the EPA.

DIRECTIONS FOR USE
NW 200-C is an end-use product that is intended to be used alone or with registered quaternary ammonium compounds or registered alcaline copper wood preservatives. NW 200-C can only be used in conjunction with a vacuum pressure-treating vessel for impregnating forest products such as lumber, millwork, poles and piles. A treatment solution of NW 200-C must be prepared prior to use. A closed-system must be used when preparing the use-solution and for delivery of the use-solution to the treatment vessel.

Do not use when brass, bronze, or copper can be contacted. Impregnation procedures must follow the applicable specifications of the American Wood Preservers’ Association. Treated wood is provided protection against termites, pollaxyloids, brown rot and white rot.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. Do not enter or allow others to enter the treated area until sprays have dried.

PREPARATION OF TREATMENT SOLUTION
When used, prepare a 0.5% to 3.33% active use-solution of NW 200-C in water. For example: To prepare 1000 gallons of a solution containing 0.33% copper metal, combine 946 gallons of water and 36 gallons of NW 200-C.

To treat with NW 200-C and Quaternary Ammonium Compound mix, prepare a 0.13% active copper use-solution of NW 200-C in water. For example: To prepare 1000 gallons of a solution containing 0.05% copper and 0.12% quaternary ammonium compound, combine 950 gallons of water, 4.4 gallons of commercial quaternary ammonium compound product containing 50% actives and 35.6 gallons of NW 200-C.

To treat with NW 200-C and Alkaline Copper Wood Preservative and quaternary ammonium compound, prepare a 0.13% to 3.33% active copper use-solution of NW 200-C and the alkaline copper wood preservative in water together with the quaternary ammonium compound. For example: To prepare 1000 gallons of a solution containing 0.15% copper metal and 0.21% quaternary ammonium compound, combine 692 gallons of water, 16.5 gallons of a commercial alkaline copper wood preservative containing 9% copper metal, 4.4 gallons of a commercial quaternary ammonium compound product containing 50% actives and 18.6 gallons of NW 200-C.

INSTRUCTIONS FOR TREATMENT OF COMPOSITE WOOD COMPONENTS
For treatment of composite wood components, NW 200-C can be applied either neat (100% active copper) or a 1:1 dilution in water. If active copper component is the sole form of copper concentration and amount applied must result in a retention of copper in wood of 3.1 – 5.0 pounds per cubic foot (pcf). Note that the amount of aluminum added may vary depending on the moisture content of the composite wood component and the cleaned数千 of NW 200-C in wood.

Apply the treatment solution by spraying the composite wood component with a low-pressure sprayer. A moderately fine sprayer, not an aerosol or fog, generally provides the best coverage. Apply in a commercial spray booth, with adequate ventilation and scrubbers to ensure the ambient aluminum levels do not exceed the levels noted in the Precautionary Statements section.

STORAGE AND DISPOSAL
Do not contaminate water, food, or feed by storage or disposal.

PESTICIDE STORAGE: Store in an area inaccessible to persons unfamiliar with its use.

PESTICIDE DISPOSAL: Pesticide wastes are custody hazardous. Improper disposal of excess pesticide, spray mixture, or rinsates is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or Hazardous Waste representative at the nearest EPA Regional office for guidance.

CONTAINER HANDLING:
Tote Container: Nonrefillable container. Do not reuse this container to hold materials other than pesticides or dilute pesticides (rinse). After emptying and cleaning, it may be allowed to temporarily hold rinsates or other pesticide-related materials in the container. Contact your state regulatory agency to determine allowable practices in your state. Empty tote container must be returned to a tock collection agency.

Residue Removal – Cleaning container before final disposal is the responsibility of the person disposing of the container. To clean container before final disposal, fill container about 10 percent full with water; agitate container vigorously; discard rinse according to pesticide disposal instructions, repeat this mixing procedure two more times. For additional container disposal information, contact product supplier.
