DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Read entire label and Notice of Warranty before using this product.

Co-Ral Livestock Dust may be used to fill cattle dust bags or it may be applied directly to cattle, swine or swine bedding by use of a shaker can. If using a shaker can, hold container at a distance from the head of the animal that will prevent eye contact with dust. When used as recommended, Co-Ral Livestock Dust controls horn flies and lice on beef and dairy cattle and lice on swine. Co-Ral Livestock Dust will also reduce face fly populations on dairy cattle; however, as face flies are able to travel over an area of several miles, best reduction of face fly populations is achieved when Co-Ral Livestock Dust is used on an area-wide basis.

The use of mechanical dusters is prohibited.

For external insecticidal use only on specified animals. Do not contaminate feed, troughs, water or water utensils. Provide thorough ventilation while dusting. Do not apply to sick, stressed or convalescent animals.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. Individuals must limit the number of animals they can treat per day with shaker to no more than 25 and the area of swine bedding they can treat per day to 1,000 sq. ft. Do not treat areas such as drinking cups, mangers, or troughs where livestock feed. Do not contaminate water, food, feedstuffs, feed or food handling equipment or milk or meat handling equipment.

Entry restrictions: Do not enter treated areas or allow contact with treated animals until dusts have settled.

INSTALLATION OF DUST BAGS: Suspend the bags by inserting ropes, chain or wire through the grommets at the top of the bag and attaching to an overhead structure or by hanging the grommets into hooks fastened to a stationary overhead 2x4 board at the heights recommended for louse and horn fly or lice fly control. In areas of frequent or heavy rainfall the dust bags should be protected from the weather.

Install as many dust bags as necessary to lanes or other openings to assure proper dusting of the animals. After the bags are in place, pull the rip cord to allow the insecticide to fall into the bottom of the bag. When dust bags are provided on a free-choice basis, allow one 12.5 pound dust bag per 25 animals.

CONTAINER DISPOSAL:

Store in a cool, dry place.

Wastes resulting from the use of this product may be disposed of on site or, if treated in conjunction with atropine.
