APPLE, PEAR, AND PISTACHIO
APPLICATION INSTRUCTIONS

GENERAL
• Do not apply this product through any type of irrigation system.
• Apply in the morning or evening when conditions are best for slow drying (cooler temperatures and higher humidity), in order to ensure adequate absorption of the product. If applied in the morning, assure that the leaves are not too wet from dew.
• To minimize foaming of spray solution, reduce agitation and add the product to the tank after filling to 1/2 capacity with water.
• Product performs best at water pH between 5 and 7; do not exceed pH of 8.5.
• No surfactant is required.
• Apply in sufficient amount of water to ensure thorough coverage without excessive runoff. Use calibrated spray equipment to ensure uniform coverage of leaves and fruit. Adjust water volumes based on tree size and spacing. In many cases, spray volumes of approximately 100 gallons per acre have been shown to be adequate.
• For apples and pears, do not exceed a total rate of 308 fluid ounces (182 grams of 6BA) per acre per season for all applications.
• Consult your local Agricultural Extension Agent, State Experiment Station, or Nufarm Agricultural Specialist for specific information regarding the use of this product in your particular orchard(s).

**Additional Instructions:**
- Direct 80% of the spray into the upper 2/3 of the tree canopy.
- Applications will be most effective when the maximum temperature is above 65°F on the day of application, and the following 2-3 days.
- Use higher rates in orchards that have a history of being difficult to thin, in varieties known to be difficult to thin, and in cool weather situations.
- **Do not exceed a total rate of 308 fluid ounces of this product (182 grams of 6BA) per acre per season for all applications.**
- **Do not apply within 86 days of harvest.**

**NOTE:** Generally, only one application is sufficient for fruit thinning. If a second application is desired to obtain additional thinning:
1. Allow 7-10 days to observe the effect of the first application.
2. Spray the second application before the average diameter of king fruitlets exceeds 20 mm diameter.

**COMPATIBILITY WITH OTHER AGRICULTURAL PRODUCTS**

Information on tank mix compatibility of this product is limited at this time.

**ORNAMENTALS**

FOR USE IN COMMERCIAL GREENHOUSES, GLASSHOUSES (ON ORNAMENTAL PLANTS GROWN IN CONTAINERS) AND ON ACTIVELY GROWING STOCK PLANTS.

This product may be used to increase lateral or basal branching and promote flowering in certain ornamental plants. This product also reduces the overall height of the plants resulting in more compact and marketable plants.

Plant response is strongly influenced by cultural and environmental variables. Growing media, water/fertilizer management, temperature, light, greenhouse composition, plant size, container size, and plant cultivar or variety may impact treatment response. Although multiple cultivars have been tested for sensitivity to this product and have demonstrated high levels of tolerance, it is impossible to ensure an acceptable response in all cultivars. Therefore, before commercial use, first time users of this product should conduct trials on a small number of plants to verify plant response.

**APPLICATION INSTRUCTIONS**

- Do not apply this product through any type of irrigation system.
- Apply as a foliar spray using standard foliar application equipment.
- Apply in a sufficient amount of water to ensure thorough coverage. Use calibrated spray equipment to ensure uniform coverage.
- Apply 1 to 2 quarts of finished spray solution per 100 ft².
- Product performs best at water pH between 5 and 7; do not exceed pH of 8.5.
- A high quality wetting agent or spray adjuvant approved for use on the crop to be treated may be added to the spray solution. Consult the wetting agent or adjuvant label or manufacturer for rates, crop tolerance, and safety information.

| To increase the number of flower buds under reproductive conditions | 100 to 200 ppm (refer to dilution table) | **For floral initiation under short day conditions (i.e., lighting/black clothing):**

Wait 5 to 10 days after the start of short days to level by removing immature phylloclades.

Make a single application immediately following or 1 day after leveling.

**For floral initiation under natural environmental conditions:**

Make a single application after flower buds first become visible (i.e., pinpoint bud stage).

**Note:** Avoid early application as it will result in phylloclade promotion and delayed flowering.
APPLICATION INSTRUCTIONS FOR USE ON CONTAINERIZED ANNUAL AND PERENNIAL FLOWERING AND FOLIAGE CROPS AND TROPICAL PLANTS

- Apply as a foliar spray when plants are fully established during active growth (i.e., at least 3 to 4 weeks after potting) to increase lateral growth.
- Apply at rates ranging from 50 to 500 ppm.
- Apply in a uniform spray volume of 2 quarts per 100 ft².
- First time users should test a small number of plants from each cultivar starting with a rate of 50 ppm on annuals and 100 ppm on perennials and tropical plants. Observe plant response and adjust the application rate accordingly.
- Multiple applications at 7 to 10 day spray intervals may be necessary to achieve optimum results.
