DuPont™ Pool Care Multifunctional Shock is a proprietary blend of DuPont Oxone®, a powerful oxygen-based oxidizer, and a chlorinating agent, combined in a perfect ratio and stabilized for easy use. This one-two punch provides the benefits of oxygen-based oxidizing and chlorinating agents in a single application. In case of excess chlorine, DuPont™ Pool Care Multifunctional Shock will reduce the chlorine level by 1 ppm for every 10,000 gallons of pool water. When applied consistently, it maintains a residual of effective free chlorine and keeps the water sparkling clear by oxidizing and disinfecting bacteria, algae, and other contaminants.

**HOW TO APPLY:**

1. Add a small test dose to check for color change. If no color change is detected, follow the recommendations below.
2. Broadcast DuPont™ Pool Care Multifunctional Shock to pool water every week to oxidize contaminants introduced by swimmers and to maintain sparkling clear pool water. To achieve the benefits of this product, it is recommended that the oxidation/filtration process be used after dilution and a minimum of 15 minutes of filtration time. In case of excess chlorine, both the oxidation/filtration process and a minimum of 15 minutes of filtration time are recommended, followed by a minimum of 10-15 minutes after the chlorine level is stabilized at the desired concentration.
