TO ELIMINATE MOLD

Small Areas – Total Surface Area Affected Less Than 30 Square Foot

Areas of mold growth less than 30 square feet can normally be remediated easily;
1) Remove heavy soil (Concrobium Mold Control must come in direct contact with mold to be effective).
2) Apply product on area until evenly wet.
3) If directed, wipe off excess wetness.
4) Allow treated surfaces to dry completely.

Ideal for: basements, bathrooms, laundry rooms, attics, closets, garages, windows, car interiors, boat interiors, RV’s, sports equipment – wherever mold takes hold.

Do not expect Concrobium Mold Control to whiten stains on contact. If mold stains remain, repack product and wipe or scrub area. In some cases, staining may be irreversible. If additional steps are taken to remove or cover the stain, repack Concrobium Mold Control as a final stop to protect area from regrowth.

Apply by cloth, hand-spray, electric or compression sprayer, cold fogger, paintbrush, roller or immersion. Exposed 0.01-0.1 sq. ft. of surface coverage per gallon depending on surface type and application method.

Read label before using.

Ready to use – do not dilute.
