Fungicidal Protective Coating

- Low-odor, quick-setting, water-based coating specifically formulated for long term fungicidal activity.
- Designed to kill residual mold and mildew remaining after pre-cleaning contaminated surfaces, as well as to inhibit the growth and spread of odor-causing bacteria, mold and mildew on its surface in residential, institutional and industrial buildings.
- Specifically designed for field or shop application to facaded and un-faced fiberglass duct liner, fiberglass insulation, paper and polymeric facings, painted and unpainted wood, metal and masonry.

**KEEP OUT OF REACH OF CHILDREN**

Caution: See left panel for additional special precautions and first aid.

In case of emergency call 1-888-853-1758. Have the product container or label with you when calling a Poison Control Center or doctor.

**FUNGICIDAL PROTECTIVE COATING**

**Black**

Active Ingredients:
- Barium Metaborate 6.39%
- 3-iodo-2-propynyl butylcarbamate 0.12%
- Other 3-iodo-2-propynyl butylcarbamates per gallon 100.00%

**DIRECTIONS FOR USE**

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or others.

**APPLICATION**

- Apply only to surfaces free of all loose dirt, grease, grime, or other materials that might interfere with the adhesion of the coating to the substrate.

**MAINTENANCE**

- Masonry, brick, plastic and cement-based surfaces: Do not inhale airborne dust, aggressively scrub the surface, then brush to produce a fine, powdery residue. Clean each contaminated area of any materials that may interfere with the adhesion of the coating and allow to dry completely before reapplying. Sprays all contaminated brick, plaster and cement-based surfaces with a masonry washer or pressure or water. A high-pressure stream of water, cleaning agent, or soap solution is effective at dislodging mildew and mold. Use a chemical solution of muriatic acid, 6 to 8% hydrochloric acid, or a mixture of water and baking soda to treat contaminated masonry. The muriatic acid is dangerous and should only be handled by professionals with adequate protective equipment.

**MATERIAL PREPARATION**

Do NOT SPILL. Keep container closed when not in use.

**SURFACE PREPARATION**

Apply only to surfaces free of all loose dirt, grease, grime, or other materials that might interfere with the adhesion of the coating to the substrate.
