DIRECTIONS FOR USE

- Use a coarse spray volume. Maintain sufficient agitation during the application to ensure uniformity to the area treated, especially litter, along feed and water lines, cracks and crevices around insulation, and where pests have been seen.

- The area of application must be large enough to cover the targeted area and be accessible to the spray equipment. Ensure adequate coverage of the sprayed area and proper drift control when spraying from the ground or out of the spray equipment. Do not apply as a fog or space spray.

- Do not apply directly to water, to areas where surface water is present, or to intertidal areas below the mean water level.

- Do not contaminate feedstuffs, water or watering and feeding sites or at an approved waste disposal facility.

- Storage and disposal: Store in original container only, tightly closed in a secure place. Keep out of reach of children and pets. Do not store near food or feed. Store in a cool, dry place. Do not contaminate feedstuffs or water with equipment washwaters. Apply this product only as specified on this label. Use of this product by unlabeled use or treatment rates may present unacceptable residues in or on any product, feed, food or water for human consumption. For advice concerning integrated pest management practices in relation to specific local conditions, consult resources in resistance management programs, your Cooperative Agricultural Extension Service, or your local Cooperative Extension Service representative or agent.

- Control of northern fowl mites (Ornithonyssus sylviarum): Use coarse or moderate volume (up to 40 gallons of diluted product). Do not use less than the labeled rate of any insect control product. Control is enhanced when interior and exterior perimeter applications to the house and barns are combined with applications to the feedlot, stables, corrals, and housing structures. Do not apply as a fog or space spray.

- Control of darkling beetles, hide beetles, house flies (adults and larvae), and little house flies: Use coarse or moderate volume (up to 40 gallons of diluted product). Do not use less than the labeled rate of any insect control product. Control is enhanced when interior and exterior perimeter applications to the house and barns are combined with applications to the feedlot, stables, corrals, and housing structures. Do not apply as a fog or space spray.

- For advice concerning integrated pest management practices in relation to specific local conditions, consult resources in resistance management programs, your Cooperative Agricultural Extension Service, or your local Cooperative Extension Service representative or agent.

- Control of stable flies and house flies (adults and larvae): Use moderate volume (up to 40 gallons of diluted product). Do not use less than the labeled rate of any insect control product. Control is enhanced when interior and exterior perimeter applications to the house and barns are combined with applications to the feedlot, stables, corrals, and housing structures. Do not apply as a fog or space spray.

- Control of ornithonyssus sylviarum: Use coarse or moderate volume (up to 40 gallons of diluted product). Do not use less than the labeled rate of any insect control product. Control is enhanced when interior and exterior perimeter applications to the house and barns are combined with applications to the feedlot, stables, corrals, and housing structures. Do not apply as a fog or space spray.

- Control of fly populations: Use moderate volume (up to 40 gallons of diluted product). Do not use less than the labeled rate of any insect control product. Control is enhanced when interior and exterior perimeter applications to the house and barns are combined with applications to the feedlot, stables, corrals, and housing structures. Do not apply as a fog or space spray.

- Control of ornithonyssus sylviarum and house flies (adults and larvae): Use coarse or moderate volume (up to 40 gallons of diluted product). Do not use less than the labeled rate of any insect control product. Control is enhanced when interior and exterior perimeter applications to the house and barns are combined with applications to the feedlot, stables, corrals, and housing structures. Do not apply as a fog or space spray.

- Control of northern fowl mites (Ornithonyssus sylviarum) and house flies (adults and larvae): Use coarse or moderate volume (up to 40 gallons of diluted product). Do not use less than the labeled rate of any insect control product. Control is enhanced when interior and exterior perimeter applications to the house and barns are combined with applications to the feedlot, stables, corrals, and housing structures. Do not apply as a fog or space spray.

- Control of ornithonyssus sylviarum and house flies (adults and larvae): Use coarse or moderate volume (up to 40 gallons of diluted product). Do not use less than the labeled rate of any insect control product. Control is enhanced when interior and exterior perimeter applications to the house and barns are combined with applications to the feedlot, stables, corrals, and housing structures. Do not apply as a fog or space spray.

- Control of ornithonyssus sylviarum, house flies (adults and larvae), and little house flies: Use coarse or moderate volume (up to 40 gallons of diluted product). Do not use less than the labeled rate of any insect control product. Control is enhanced when interior and exterior perimeter applications to the house and barns are combined with applications to the feedlot, stables, corrals, and housing structures. Do not apply as a fog or space spray.
