CENTERFIRE™ 75 WSP

For use by individuals/branched/registered by the state to apply termiticide products. States may have more restrictive registration or limitations on the number of persons using this product. Consult the structure pest control regulatory agency of your state prior to use of this product.

ACTIVE INGREDIENT:
Imidacloprid, 1-(6-Chloro-3-pyridinyl)methyl-

OTHER INGREDIENTS:

MFG. NO.: 34552B6

For use only as directed. Do Not contaminate water bodies or aquatic habitats with this product. Stop agitation before tank lid is opened.

INSTRUCTIONS FOR USING WATER SOLUBLE PACKAGES (WSP) DIRECTLY INTO SPRAY TANKS:

1. Dilute WSP to 1 gallon of water per 100 square feet of treated surface area. Apply 4 gallons of solution for every 10 feet of application depth.

2. Do not add other products to the spray tank.

3. Fill spray tank with water to approximately three-fourths full and agitate tank while adding WSPs. Add approximately 20 WSPs per gallon of water to be treated.

4. Stop agitation when WSPs have completely dissolved.

AVERAGE DROPPED PUNISHMENTS:

For maximum effectiveness, complete the following steps before adding water:

1. Mix and disperse WSP in 100 square feet of water.

2. Add WSPs to spray tank by the gallon and mix thoroughly.

3. Do not add other products to the spray tank.

4. Fill spray tank with water to approximately three-fourths full and agitate tank while adding WSPs.

5. Stop agitation when WSPs have completely dissolved.

EPA Reg. No. 432-1332

**CENTERFIRE™ 75 WSP**

For use by individuals/licensed or registered by the state to apply termite control products. States may have more restrictive restrictions concerning the use of termite control products. Consult the state's pest control regulatory agency of your state prior to use of this product.

Do not apply to control external termites, drywood termites, dampwood termites, carpenter ants, or other insects.

**ACTIVE INGREDIENT:**

Imidacloprid, 1-[(6-Chloro-3-pyridinyl)methyl]-3-(2-nitro-2-imidazolidinimine) (imidacloprid)

**OTHER INGREDIENTS:**

Water soluble packets. Do not use in or around swimming pools or fish ponds.

100323100 10082481V

**STOP - READ THE LABEL BEFORE USE OF CHILDREN'S CAUTION**

**PRECAUTIONAL STATEMENTS**

**Hazard Statements:**

Inhalation, inhaled, or absorbed through skin. Causes eye irritation. Avoid contact with eyes, mouth, and skin or clothing. Avoid breathing dust or mists. Wash thoroughly with soap and water after handling.

**DANGERS TO HUMANS AND DOMESTIC ANIMALS**

CAUTION:

Do not spray water from a hose or fill pipe to break or dissolve the WSP(s). Keep WSP intact. Do not cut or puncture WSP. Keep the WSP(s) in outer packaging until just before use. Handle with dry gloves and according to the label instructions for PPE. Do not apply if weather conditions are unsuitable for product application, i.e. temperature, wind, or the presence of moisture in the soil. Use only with PPE and that is intended for use with imidacloprid.

**FIRST AID**

If swallowed:

• Do not induce vomiting. Call a Poison Control Center or doctor immediately. Do not give anything by mouth to an unconscious person.

• If ingested and vomiting occurs, call a Poison Control Center or doctor immediately. Do not give anything by mouth to an unconscious person.

If inhaled:

• Get fresh air immediately. Do not attempt to induce vomiting. Call a Poison Control Center or doctor immediately.

• If person is unconscious, do not attempt to induce vomiting. Give oxygen if breathing is difficult. Call a Poison Control Center or doctor immediately.

If skin contacted:

• Wash exposed area with soap and water for 15 - 20 minutes. Call a Poison Control Center or doctor immediately.

• If contact is with face, wash with soap and water. Avoid contact with conjunctival tissues.

If eyes contacted:

• Rinse skin immediately with plenty of soap and water for 15 - 20 minutes. Call a Poison Control Center or doctor immediately.

• Take off contaminated clothing.

• Do not induce vomiting unless told to do so by a poison control center or doctor.

Incompatibilities:

Household cleaners, inorganic acid, strong or alkaline cleaning compounds, household cleaning compounds, bleaching compounds, water sources, and water solutions cannot be used in or around the treatment area. Consult the label for compatible cleaning compounds or cleaning materials.

**Environmental Hazards:**

This product is highly toxic to aquatic organisms. Do not place in or near ponds, lakes, streams, or other bodies of water. Do not place in or near wetlands or waterways. Do not place in or near drainage systems or other water sources which may leach into streams or bodies of water. May severely harm or kill aquatic organisms. May severely harm or kill plants. Do not allow the treated soil solution to reach water sources or other surface or ground water sources.

**Precautionary Statements:**

**PPE:**

• Wear PPE approved for imidacloprid. PPE, including respirators, should be NIOSH approved and not PAPR systems.
### Instructs for Using Water-Soluble Packages Directly into Spray Tanks

**For use by individuals/licensed or registered by the state to apply termiticide products. States may have more restrictive regulations concerning the use of water-soluble termiticide products. Consult the structural pest control regulatory agency of your state prior to use of this product.**

**CENTIFIRE 75 WSP**

For use by individuals/licensed or registered by the state to apply termiticide products. States may have more restrictive regulations concerning the use of water-soluble termiticide products. Consult the structural pest control regulatory agency of your state prior to use of this product.

**ACTIVE INGREDIENT:**
- 75% Chlorfluazuron (technical) [80% 2-methyl-6-chloro-4(3H)-1,2,4-triazin-3-one]

**OTHER INGREDIENTS:**
- 25% Water

Do not store. Keep away from children. Do not apply directly to any plant, tree, bush, etc., or to manmade objects including non-cellulosic materials such as concrete, masonry, fiberglass, and plastics.

**STOP - READ THE LABEL BEFORE USE OF CHILDREN’S CAUTION**

**APPLICATION VOLUME**

To apply 0.05% termiticide solution, apply 2 gallons of 0.1% solution per 10 linear feet of wall. For example, if 0.05% is the correct use rate to be applied in 4 gallons of water, then 2 gallons of 0.1% dilution may be used per 10 linear feet to be applied as an equivalent of 0.05% Centerfire 75 WSP in water.

**APPLICATION**

1. Application to soil around the foundation walls and around pillars and other foundation elements, at the rate prescribed from grade to a minimum depth of 4 feet. When the top of the treated soil is reached, stop treatment to prevent moving of the treated soil. The soil must be treated to a depth of 4 feet.
Prior to treatment, if feasible, expose the water pipe(s) coming from the well to the structure, if the pipe(s) enter the structure within 3 feet of grade.

is used as the primary treatment for prevention or control of subterranean termites and is

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE EXCLUSIVE REMEDY OF THE USER OR BUYER FOR ANY AND ALL

3. BATH TRAPS:

2. HOLLOW BLOCK FOUNDATION OR MASONRY VOIDS:

•

area is used.

Drill through the slab adjacent to the drain and use sub-slab injection to apply solution to the soil. Multiple access points may be drilled adjacent to the drain.

drenching the soil at a volume of no less than 3 gallons of solution per square foot.

Treatment of voids in block or rubble foundation walls must be closely examined. Applicators must inspect areas of possible run off as a precaution against

It is required that all structures, regardless of the type of construction, be protected by establishing a vertical treated zone along the outer perimeter of the foundation wall. Consult the OUTER FOUNDATION WALL sections of this label for detailed instructions on the treatment procedure.

If termite activity is neither along the perimeter wall nor on a pier within the inaccessible crawl space, to prevent subterranean termites from constructing mud

Many states have shorter intervals so check state regulations which may apply.

DO NOT MAKE TREATMENT UNTIL LOCATION OF HEAT OR AIR CONDITIONING DUCTS AND VENTS ARE KNOWN AND IDENTIFIED. USE EXTREME CAUTION TO

To treat soil beneath a slab, including attached porches, carports, entrance platforms, garages and similar slab structures

Do not treat within a distance of one foot out from the drip line of edible plants.

puncture or inject into these structural elements.

Do not apply solution until location of heat pipes, ducts, water and sewer lines and electrical conduits are known and identified. Caution must be taken to not

do not exceed 12 inches above the floor level.

When spraying overhead in living areas, cover surfaces below the treated area with plastic

When termite activity is located within an interior wall or structural member, the soil beneath the slab and the wall void at this site of

For control of ants in eaves and other structures, apply a 0.5 to 1.0% solution as a general purpose, spot, crack and crevice or wall wash application. Application to foundation

Do not apply solution until location of heat pipes, ducts, water and sewer lines and electrical conduits are known and identified. Caution must be taken to not

At the obstructed location by rodding alone. When rodding, rod holes must be spaced in a manner that will allow for a continuous treated zone, not exceed 12 inches

To treat soil at a volume of 1 gallon of solution per square foot.

Drill through the slab adjacent to the drain and use sub-slab injection to apply solution to the soil. Multiple access points may be drilled adjacent to the drain.

When trenching, excavate a trench along the outside foundation that is about 6 inches wide

To treat soil at a volume of 1 gallon of solution per square foot.

Drill through the slab adjacent to the drain and use sub-slab injection to apply solution to the soil. Multiple access points may be drilled adjacent to the drain.

Do not treat within a distance of one foot out from the drip line of edible plants.

For treatment of accessible areas below the ground slab, make a spot treatment by foaming without concentrating the Centerfire 75 WSP solution as previously described for soil applications. Add the manufacturer specified volume of additional water to the foam concentrate. 

CONTROL OF WOOD INFESTING PESTS

For control of above ground termites and carpenter ants in treated districts, apply a 0.5 to 1.0% solution or sufficient volume of Centerfire 75 WSP

For control of above ground termites and carpenter ants in treated districts, apply a 0.5 to 1.0% solution or sufficient volume of Centerfire 75 WSP

By foaming without concentrating the Centerfire 75 WSP solution as previously described for soil applications. Add the manufacturer specified volume of additional water to the foam concentrate. 

termites in the soil. For small trees (< 6 inches in diameter), apply 1 gallon of solution. For larger trees, apply 4 gallons per 10 linear feet (measured as the

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

By foaming without concentrating the Centerfire 75 WSP solution as previously described for soil applications. Add the manufacturer specified volume of additional water to the foam concentrate. 

Treatment of accessible areas above the ground slab is accomplished by application to the point of wetness, but do not apply to the point of runoff. When spraying overhead in living areas, cover surfaces below the treated area with plastic

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

For control of ants in eaves and other structures, apply a 0.5 to 1.0% solution as a general purpose, spot, crack and crevice or wall wash application. Application to foundation

Do not treat within a distance of one foot out from the drip line of edible plants.

termites in the soil. For small trees (< 6 inches in diameter), apply 1 gallon of solution. For larger trees, apply 4 gallons per 10 linear feet (measured as the

Do not treat within a distance of one foot out from the drip line of edible plants.

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

By foaming without concentrating the Centerfire 75 WSP solution as previously described for soil applications. Add the manufacturer specified volume of additional water to the foam concentrate. 

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

Do not treat within a distance of one foot out from the drip line of edible plants.

When applying Centerfire 75 WSP in building materials, the solution must be maintained at no less than 85 degrees Fahrenheit.

Use of the term Centerfire 75 WSP is intended to confer a kill of subterranean termites, termite systems and any other termite pests that may be present in

Do not treat within a distance of one foot out from the drip line of edible plants.

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

Do not treat within a distance of one foot out from the drip line of edible plants.

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

Do not treat within a distance of one foot out from the drip line of edible plants.

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.

For control of subterranean termites accessed by soil or soil-steel or soil-wood interfaces, use a volume of solution no less than 3 gallons of solution per square foot.
Prior to treatment, if feasible, expose the water pipe(s) coming from the well to the structure, if the pipe(s) enter the structure within 3 feet of grade.

For shallow foundations, one foot or less of depth, dig a narrow trench that does not exceed 6 inches wide and 6 inches deep along the entire exterior perimeter, including under any attached slabs such as garages, porches, patios, driveways and pavement adjoining the foundation. Interior spot treatments must be made to interior cavities above sites of termite activity in masonry, consult sections of this label appropriate to the element of construction, FOAM APPLICATIONS or CONTROL OF WOOD INFESTING PESTS for detailed directions on any of these treatments.

Do not contaminate wells or cisterns.
Prior to treatment, if feasible, expose the water pipe(s) coming from the well to the structure, if the pipe(s) enter the structure within 3 feet of grade. For basements and other foundations deeper than one foot, the application must be made by trenching and rodding from the bottom of a shallow trenching, or trenching and rodding from the bottom of the trench, around the perimeter of the foundation walls. For interior access (i.e., on the water side of the structure), the treated backfill technique (described above) can also be used to minimize off-site movement of termites.

Exterior PERIMERET TREATMENT

When appropriate (i.e., on the water side of the structure), the treated backfill technique (described above) can also be used to minimize off-site movement of termites. Use of the treated backfill technique replaces conventional injection techniques.

Wood treatments using injection techniques and/or surface applications, to treat active infestations in structural timbers.

Drilling through the slab adjacent to the drain and use sub-slab injection to apply solution to the soil. Multiple access points may be drilled adjacent to the drain.

NOT CONTAMINATE DUCTS AND VENTS. Plug and fill all drilled holes in commonly occupied areas with suitable sealant. Plugs must be of non-cellulose material to prevent penetration by termite workers.

DO NOT MAKE TREATMENT UNTIL LOCATION OF HEAT OR AIR CONDITIONING DUCTS AND VENTS ARE KNOWN AND IDENTIFIED. USE EXTREME CAUTION TO protect these structural elements. If treatment is necessary, ensure that the treatment is applied correctly and that the structural elements are not damaged.

To treat soil beneath a slab, including attached porches, carports, entrance platforms, garages and similar slab structures

Consult State, Federal, or Local authorities for information regarding the approved treatment practices for areas in close proximity to potable water supplies.

In the absence of termite activity, termite infestations may be prevented by the application of environmental control measures. Preventing or eliminating environmental conditions that are conducive for termite activity in structural timbers is the most effective way to prevent termite infestations.

To establish a continuous treated zone, 4 inches of treated soil is established, in accordance with application techniques described in this product's labeling. The timing and type of these retreatments will vary, depending on factors such as termite activity, structural configurations, and related conditions in the environment.

Following treatment, entrance holes may be plugged with small pieces of steel wool or similar material.

Drywood termites and wood-infesting beetles or borers (such as, but not limited to, powder post borers, ambrosia or ambrosia beetles, buprestis powder post beetles, or longhorn beetles) Subterranean termite soils can be treated with granules, traps, or as-of-120-gallon per linear foot. These treatments may not be effective for other pest species, such as carpenter ants or fire ants. When treating accessible soils, the treated backfill technique is recommended. Use of the treated backfill technique replaces conventional injection techniques.

In the absence of termite activity, termite infestations may be prevented by the application of environmental control measures. Preventing or eliminating environmental conditions that are conducive for termite activity in structural timbers is the most effective way to prevent termite infestations.

For control of drywood termites and carpenter ants in termite-resistant treated timbers. Use of the treated backfill technique replaces conventional injection techniques.

Consult State, Federal, or Local authorities for information regarding the approved treatment practices for areas in close proximity to potable water supplies.

To treat soil beneath a slab, including attached porches, carports, entrance platforms, garages and similar slab structures
Prior to treatment, if feasible, expose the water pipe(s) coming from the well to the structure, if the pipe(s) enter the structure within 3 feet of grade.

Prior to treatment applicators are advised to take precautions to limit the risk of applying the termiticide into subsurface drains that could empty into any soil on or near the treated area. Termiticide exposure from subsurface drains may extend 3 feet on either side of the drain. Do not install a soakaway pit or any other deep drain near a treatment area unless the soakaway pit is isolated from the treatment area.

For treatment of any soil surrounding or within 3 feet of the drain, see "Drainage Line Treatments" and "Precautions for Soil and Drain Treatment." Do not contaminate wells or cisterns.

EXTERIOR PERIMETER TREATMENT

Maintenance of the element of construction, FOAM APPLICATIONS or CONTROL OF WOOD INFESTING PESTS for detailed directions on any of these treatment procedures. Do not apply solution until location of heat pipes, ducts, water and sewer lines and electrical conduits are known and identified. Caution must be taken to not apply solution to any electrical box (or other metallic object) before the application of the solution.

Do not apply solution until location of heat pipes, ducts, water and sewer lines and electrical conduits are known and identified. Caution must be taken to not apply solution to any electrical box (or other metallic object) before the application of the solution.

In situations where necessary, conventional application methods can be supplemented through use of foam generating equipment. See "FOAM APPLICATIONS" for detailed directions.

Drill through the slab adjacent to the drain and use sub-slab injection to apply solution to the soil. Multiple access points may be drilled adjacent to the drain.

Sub-slab injections made through the slab at or near areas where termites are known to be penetrating the slab to reach wood in the structure and/or at termite activity located within hollow-block foundations or masonry voids must be treated. Spot treatments must then be made to any indoor areas where termite activity is present. Optional interior spot treatments may also be made to high risk areas in localized areas, such as around windows, doors, electrical or utility entry points, and other places where termites are more likely to be present.

Do not apply solution until location of heat pipes, ducts, water and sewer lines and electrical conduits are known and identified. Caution must be taken to not apply solution to any electrical box (or other metallic object) before the application of the solution.

In determining the timing and method of retreatment for subterranean termites, the locations and timing of treatment application(s) are primary factors.

Re-treatment is the process of re-treating a portion of the structure or building in order to re-establish a termite exclusion zone. Re-treatment may be performed if, in the judgement of the applicator, it is necessary to ensure adequate protection of the structure. In determining the timing and method of retreatment, the applicator must consider the presence and density of termite population(s), presence of soil and drywood termites, termite control results, site conditions and construction history.

Maintenance of the element of construction, FOAM APPLICATIONS or CONTROL OF WOOD INFESTING PESTS for detailed directions on any of these treatment procedures.

If there is clear evidence of reinfestation or termite activity in treated areas, including termite activity located within hollow-block foundations or masonry voids, or termite activity located within building voids or other areas where termite activity is present, retreatment may be performed if, in the judgement of the applicator, it is necessary to ensure adequate protection of the structure. In determining the timing and method of retreatment, the locations and timing of treatment application(s) are primary factors.

Do not apply solution until location of heat pipes, ducts, water and sewer lines and electrical conduits are known and identified. Caution must be taken to not apply solution to any electrical box (or other metallic object) before the application of the solution.

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION

When treating adjacent to an existing structure, the applicator must check the area accessible cracks and holes to prevent any leaks or significant exposures to humans and domestic animals. When treating other areas, the applicator must check the area treated for visible and contaminated areas of the structure until the clean up is completed. The applicator must advise people who see any signs of leakage. After application, the applicator is required to check the treated area until dry.

Harmful if swallowed, inhaled, or absorbed through skin. Causes eye irritation.

Avoid contact with skin, eyes, or clothing. Avoid breathing dust or vapor. Wash thoroughly with soap and water after handling.

Personal Protective Equipment

Pesticide handlers (mixers, loaders, and applicators) must wear long-sleeved shirt and long pants, socks, shoes, and water-proof gloves (barrier laminate, butyl rubber or similar material). Additional PPE may be used as necessary to be consistent with local regulations and conditions.

When handling water-soluble pouches, water-proof gloves are sufficient. In addition: all pesticide handlers must wear personal protective equipment (PPE) as described above. When not handling water-soluble pouches, pesticide handlers must wear long-sleeved shirts, long pants, and water-proof gloves (barrier laminate, butyl rubber or similar material) as described above.

NOTE TO PHYSICIAN:

No specific antidote is available. Treat patient symptomatically.

Have the product container or label with you when calling a poison control center or doctor. Call a poison control center or doctor for treatment advice.

If swallowed:

• Call a poison control center or doctor immediately for treatment advice.

• Take off contaminated clothing and shoes.

• Do not give anything by mouth to an unconscious person.

• Call a poison control center or doctor for treatment advice.

If on skin:

• Wash the affected area thoroughly with soap and water.

• Call a poison control center or doctor for treatment advice.

• Remove contact lenses, if present, after the first 5 minutes unless instructed to keep them in by a doctor.

• Hold eyelids open and rinse slowly and gently with water for 15 - 20 minutes.

• Call a poison control center or doctor for treatment advice.

If in eyes:

• Do not rub eye. If necessary, have the person irrigate the eye thoroughly with water for 15 - 20 minutes. If persisting irritation occurs, call a poison control center or doctor for treatment advice.

• Call a poison control center or doctor for treatment advice.

Pesticide Storage:

Preferably in a locked storage area.

Do not contaminate water, food, or feed by storage or disposal.

Hazard to Humans and Domestic Animals

CAUTION

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION:

When treating adjacent to an existing structure, the applicator must check the area

for soil that will accept the solution at the specified rate. Do not treat soil that is

water-saturated or frozen, or in any conditions where run-off or movement from the treatment

residues on blooming crops/plants or weeds. Do not apply this product or allow it to drift to

areas where surface water is present or to intertidal areas below the mean high water mark. Do not

apply this product or allow it to drift to surface waters. Do not apply this product or allow it to drift to

sites or to areas where it may be carried by surface water to waterways or water quality sensitive

areas, or to areas where it may be carried by surface water to water quality sensitive areas.

FIRST AID

In case of contact:

Wash off product from skin with plenty of soap and water. If not removed, wash

with 2% acetic acid. If tissue burns, consult a physician. If no acetic acid is

available, wash thoroughly with soap and water.

If in eyes:

Wash out with plenty of water and refer to a physician. If not removed, wash

with 2% acetic acid. If tissue burns, consult a physician. If no acetic acid is

available, wash thoroughly with soap and water.

If ingested:

Wash the mouth thoroughly. Do not induce vomiting unless told to do so by a

physician. Consult a physician immediately if ingestion occurs. Do not give anything by mouth to an unconscious

person.

HAZARDS TO VEGETATION

General:

This product is highly toxic to bees exposed to direct treatment or drift. Do not

apply directly to water, to areas where water is to be used for forage, to

habitats used by honey bees, or to areas where bees are commonly present.

This product is toxic to aquatic invertebrates. Do not apply this product to

wetlands or to surface water bodies, or to any other aquatic body (e.g., lake, pond, or ditch) unless the

treatment area is on land (i.e., not in water). Do not use in areas where surface water is present or to

intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment

washwaters. Apply this product only as

area (site) is likely to occur. This product is highly toxic to bees exposed to direct treatment or

spill or leak incidents, keep unauthorized people away. You may contact the Bayer

Emergency Response Team for decontamination procedures or any other

technical assistance that may be necessary. The Bayer Environmental Science Emergency Response

Waste resulting from the use of this product may be disposed of on site
