ACTIVE INGREDIENT
Yeast extract Hydrolysate from Saccharomyces cerevisiae ........................................... 0.063%
OTHER INGREDIENTS ........................................................................................................... 99.937%
TOTAL ...................................................................................................................................... 100.000%

Refer to fertilizer ingredients section of label for nutritional content information.

STOP - READ THE LABEL BEFORE USE
KEEP OUT OF REACH OF CHILDREN

CAUTION
Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail).

FIRST AID
If in eyes: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.

PRECAUTIONARY STATEMENTS
Hazard to Humans

CAUTION: Causes moderate eye irritation. Avoid contact with eyes, skin or clothing. Wash thoroughly with soap and water after handling.

Personal Protection Equipment (PPE): Applicators and other handlers must wear long sleeved shirts, long pants, socks, and shoes. Follow manufacturer’s instruction for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

Environmental Hazards: Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean water high-water mark. Do not contaminate water by cleaning or disposal of equipment wash waters.

User Safety Recommendations: Users should wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet. Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

APPLICATION INSTRUCTIONS FOR CHEMIGATION

KeyPlex 350 OR may be applied through drip irrigation systems.

Apply this product only through drip irrigation systems. Do not apply this product through any other type of irrigation system.

Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water.

If you have any questions about calibration, you should contact State Extension Service Specialists, equipment manufacturers, or other experts.

Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system, unless the pesticide label-prescribed safety devices for public water systems are in place.

A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

A pesticide supply tank is recommended for the application of KeyPlex 350 OR in chemigation systems. Use a minimum of 15 parts of water to 1 part of KeyPlex 350 OR in the solution tank. Agitation is not required.

Apply KeyPlex 350 OR at rates and timings as directed on this label.

Chemical tank and injector system should be thoroughly cleaned before use. Flush system with clean water.

Application should be in sufficient water and of sufficient duration to apply the recommended rate evenly to the entire treated area.

Do not allow irrigation water to collect or run-off during chemigation.

The system should provide uniform waterflow and should have no leaks.

Introduce KeyPlex 350 OR into the irrigation water during the end of the irrigation cycle. Adjust flow from injector equipment to use contents over a period of 30 minutes to 1 hour.

USE PRECAUTIONS FOR CHEMIGATION

DO NOT apply this product through irrigation systems connected to a public water system. Public water system means a system for the provision to the public of piped water for human consumption if such a system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year. The soil should have adequate moisture prior to chemigation.

Terminate chemigation at depletion of KeyPlex 350 OR from the main feed supply tank or after 6 hours from start, whichever is shorter. For maximum efficacy, subsequent irrigation (water only) should be delayed for at least 24 hours following chemigation.

1. The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on irrigation pipeline to prevent water-source contamination from backflow.

2. The pesticide injection must contain a functional, automatic, quick-closing check valve to prevent the flow of fluids back towards the injection pump.

3. The pesticide injection pipeline must also contain a functional, normally closed solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

4. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.

5. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

6. Systems must use a metering pump, such as a positive displacement injection pump (e.g. diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

Allow sufficient time for pesticide to be flushed through all lines and nozzles before turning off irrigation water. A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

CONDITIONS OF SALE

Seller warrants that the product conforms to its chemical description and is reasonably fit for the purpose stated on the label when use accordance with directions under normal condition of use. To the fullest extent permitted by law, the registrant shall not be liable for use of this product contrary to label instructions, or under abnormal conditions not reasonably foreseeable to the seller, and buyer assumes the risk of any such use.
