Ground Squirrel Bait

Ground squirrels (Spermophilus Townsendii var.)

By Wilco

This product may only be used within 100 feet of man made structures to control California and Townsend Ground Squirrels in California, Nevada, Oregon, Washington, Idaho, Arizona, New Mexico and Utah only.

Ground Squirrel Bait by Wilco is actually impregnated by the toxicant.

Active ingredient:

Diphacinone (CAS# 82666) .................................. 0.005%

Other ingredients............................................ 99.995%

Total......................................................... 100.00%

CAUTION: Harmful if swallowed or absorbed through the skin. Causes inflammation in eyes. Keep away from humans, domestic animals, and pets.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

When handling this product, use PPE as follows:

- To protect your skin and eyes: Wear splash goggles and waterproof gloves.
- To protect your respiratory system: Wear a dust respirator with a high efficiency particulate air (HEPA) filter.
- To protect your hands: Wear gloves with adequate resistance to this product.

PRECAUTIONARY STATEMENTS

Hazard to Humans and Domestic Animals

CAUTION: May irritate the eyes or be absorbed through the skin. Causes inflammation in eyes. Keep away from humans, domestic animals, and pets.

FIRST AID

If swallowed:

- Do not induce vomiting unless told to do so by a poison control center or doctor.
- Give 1 to 2 teaspoons of vegetable oil or mineral oil orally to induce vomiting. If the suspect refuses or vomits immediately after ingesting the vegetable or mineral oil, give 1 to 2 teaspoons of 1% solution of hydrogen peroxide orally.

If on skin:

- Remove contaminated clothing and wash all exposed skin with soap and water.
- Wash hands after removing contaminated clothing.

If in eyes:

- Rinse eyes immediately with large amounts of water for 15 to 20 minutes. If eyes continue to irritate, consult a physician.

If inhaled:

- Remove to fresh air.

NOTE TO PHYSICIAN OR VETERINARIAN

TREATMENT FOR PET POISONING

If ingested or absorbed through the skin, this material may reduce the clotting ability of the blood and cause hemorrhage. This effect can be reversed by giving vitamin K1, intravenously or intramuscularly. Consult a physician or veterinarian immediately.

NOTE TO PHYSICIAN OR VETERINARIAN

TREATMENT FOR PET POISONING

If ingested or absorbed through the skin, this material may reduce the clotting ability of the blood and cause hemorrhage. This effect can be reversed by giving vitamin K1, intravenously or intramuscularly. Consult a physician or veterinarian immediately.

USE RESTRICTIONS: For use only around buildings (including roads and flower gardens) in second, temperate-resistant bait stations (Wilco Ground Squirrel Bait Stations). These stations must be resistant to destruction by dogs and preferably located 100 feet outside buildings, 100 feet from water, and 100 feet from a food or feed source. Use this bait only as directed on this label. This product in individual containers holding less than 4 pounds of bait may not be broadcast. Do not sell this product by any method not specified on this label.

STORAGE AND DISPOSAL

Do not contaminate water by discharging, pouring or depositing products

ENVIRONMENTAL HAZARDS

This product is extremely toxic to fish and wildlife. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment wash water from the use of this product. Offer for recycling or reconditioning; or puncture and dispose of in a sanitary landfill.

PACKAGING DISPOSAL

Containers resulting from the use of this product must be disposed of in accordance with the local government and the manufacturer’s directions.

If ingested or absorbed through the skin, this material may reduce the clotting ability of the blood and cause hemorrhage. This effect can be reversed by giving vitamin K1, intravenously or intramuscularly. Consult a physician or veterinarian immediately.

APPLICATION DIRECTIONS:

Secure bait stations so that they cannot be readily accessible to target ground squirrels, preferably near active burrows. Secure stations 20 to 100 feet apart, depending upon density of the population. Use water-resistant gloves and use a scooping device (preferably long-handled) to transfer bait from the container to the bait station. Check each bait station frequently to ensure that it is uninterrupted by birds or other nontarget animals. If signs of feeding by nontarget animals are observed (such as 5-15 days or until signs of feeding have stopped.
