Tenkoz Trifluralin 4EC Herbicide  
(EPA Reg. No. 62719-250-55467) 
Weed Control in Spearmint and Peppermint

ATTENTION
• It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
• This labeling must be in the possession of the user at the time of application.
• Read the label affixed to the container for Tenkoz Trifluralin 4EC Herbicide before applying. Carefully follow all precautionary statements and applicable use directions.
• Use of Trifluralin 4EC according to this supplemental labeling is subject to all use precautions and limitations imposed by the label affixed to the container for Tenkoz Trifluralin 4EC Herbicide.

Directions for Use
Trifluralin 4EC herbicide may be applied to established spearmint and peppermint as a soil incorporated treatment, by chemigation, or surface applied and watered-in. Apply during dormancy or semi-dormancy in late winter to spring or in the fall after harvest. Trifluralin 4EC does not control established weeds, therefore, application must be made prior to germination time of target weeds (refer to product label for labeled weeds). Late winter to early spring application will control susceptible weeds that germinate in the spring and early summer and fall application will control susceptible fall germinating weeds. If mechanically incorporated, use equipment that will provide thorough soil mixing with minimal damage to the crop stand (refer to product label for incorporation equipment recommendations and labeled weeds).

Trifluralin 4EC may be surface applied for annual grass control in established mint using chemigation, or ground, or aerial broadcast application equipment.

Chemigation: For chemigation application, apply at the recommended broadcast application rates. Read and follow label instructions for chemigation outlined in the main product label for Trifluralin 4EC.

Surface Applications Activated by Rainfall or Irrigation: Surface applications of Trifluralin 4EC may be activated by rainfall, sprinkler irrigation, or flood irrigation. Rainfall or a single overhead sprinkler irrigation of 0.5 acre inch or more is required to activate Trifluralin 4EC. If rainfall or irrigation has not occurred within 3 days after application, mechanical incorporation is recommended to activate the treatment.

Broadcast Application Rates:
