**FIRST AID**

If inhaled
- Move person to fresh air.
- If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth to mouth, if possible.
- Call a poison control center or doctor for further treatment advice.

If in eyes
- Hold eyes open and rinse slowly and gently with water for 15 - 20 minutes.
- Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
- Call a poison control center or doctor for treatment advice.

**HOTLINE NUMBER**

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact 1-800-892-0099 (24 hours) for emergency medical treatment and/or transportation emergency information. For all other information, call 1-800-89-VALENT (898-2536).

**PRECAUTIONARY STATEMENTS**

**HAZARDS TO HUMANS (AND DOMESTIC ANIMALS)**

**CAUTION**

Harmful if inhaled. Causes moderate eye irritation. Avoid breathing dust or spray mist. Avoid contact with eyes or clothing. Remove and wash contaminated clothing before reuse. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet.

**STORAGE AND DISPOSAL**

Do not contaminate water, food or feed by storage or disposal.

Pesticide Storage: Store in a cool [59° - 86° F (15° - 30° C)], dry place.

Pesticide Disposal: Wastes resulting from use of this product must be disposed of on site or at an approved waste disposal facility.

Container Handling: Nonrefillable container. Do not reuse or refill this container. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank, or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then, offer for recycling if available or puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

**Active Ingredient:**
Bacillus thuringiensis, subsp. israelensis, strain AM 65-52 fermentation solids, spores, and insecticidal toxins *

**Other Ingredients:**

**Total:**

*Potency: 3000 International toxic units (ITU) per mg. Equivalent to 1.38 billion ITU/lb. of product.

The percent active ingredient does not indicate product performance and potency measurements are not Federally standardized.

**KEEP OUT OF REACH OF CHILDREN**

See back panel for additional Precautionary Statements.
CHEMICAL SYSTEMS CONNECTED TO PUBLIC WATER SYSTEMS

For systems that provide the public with safe water for human consumption if such system has at least 15 service connections or serves an average of at least 25 individuals daily for less than 60 days each year, systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump). The system must contain interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the injection system is not operating or manually shut down. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

Do not apply when wind speed favors drift beyond the area intended for treatment. Dilute Gnatrol WDG in water prior to injection. Agitation of the material to be injected is required to keep the product suspended during the injection cycle. The system must contain interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

Gnatrol WDG is not known to be phytotoxic to ornamental plant species. However, since all ornamental plant species have not been evaluated, sensitivity to Gnatrol WDG should be checked on several ornamental plants to be treated prior to wide-scale usage.

NON-AGRICULTURAL USE SITE APPLICATIONS

For use on plants intended for aesthetic purposes and being grown in interior plantscapes and indoor ornamental gardens. Not for use on plants being grown for sale or other commercial use, or for commercial use production, or for research purposes.

Do not apply soil drenches to plants under stress, or follow application with excessive amounts of water.

Do not apply soil drenches to plants under stress, or follow application with excessive amounts of water.

APPLICATION DIRECTIONS

Fungus gnat control

Fungus gnat (F. occidentalis) Give Gnatrol WDG in water prior to injection. Agitation of the material to be injected is required to keep the product suspended during the injection cycle.

Do not apply when wind speed favors drift beyond the area intended for treatment (SprinklerChemical Only). Dilute Gnatrol WDG in water prior to injection. Agitation of the material to be injected is required to keep the product suspended during the injection cycle.

Where supply tanks are used for continuous application, fill the system tank with the desired quantity of product suspended in the specified volume of water. Pumps should be turned on for any new or existing systems that have sat for several hours.

WDG performance.)
