DANGER
FOR INSTITUTIONAL AND INDUSTRIAL USES.

NOTE TO PHYSICIAN:
- Call a Poison Control Center or doctor immediately for treatment advice.

IF ON SKIN OR IN EYES:
- Call a Poison Control Center or doctor for treatment advice.
- If person is not breathing, call 911 or an ambulance, then give artificial respirations.
- Move person to fresh air.

FIRST AID
- If splashed into eyes, rinse them thoroughly with water for at least 10 minutes. Do not rinse equipment with water after treatment and do not soak equipment in the sanitizing solution.

The following are critical factors affecting wastewater disinfection.

100%

The following are critical factors affecting wastewater disinfection.

MPN of the effluent, which is directly related to the water quality standards requirements, should be the final guide in selecting the proper dosage, as necessary, to obtain the required level of available chlorine.

Residual chlorine is about 0.5 ppm after 15 minutes of contact time. After this time, a trial application should be made to confirm compliance with disinfecting requirements.

It is a violation of federal law to use this product in a manner inconsistent with its labeling. Use of this product is subject to the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting regulations of your state. Follow the requirements for disposing of treated wastewater in accordance with the state and local regulations. Contact your local Health Department for further details.

The treated effluent is suitable for re-use provided the effluent meets the requirements of the NPDES permit and any state or local regulations.

Disinfection of Drinking Water

DOSAGE

EMERGENCY/PUBLIC/INDIVIDUAL SYSTEMS

- When microbial control is evident, add 11 fl. oz. of this product per 10,000 gallons in the system to obtain 5 to 10 ppm available chlorine. Apply half (or 1/3, 1/4, or 1/5) of the product dissolving as the water passes through the bed will aid in sanitizing the new sand.

- When microbial control is evident, add 11 fl. oz. of this product per 10,000 gallons in the system to obtain 5 to 10 ppm available chlorine. Add 11 fl. oz. of this product per 10,000 gallons in the system to obtain 5 to 10 ppm available chlorine.

- When microbial control is evident, add 11 fl. oz. of this product per 10,000 gallons in the system to obtain 5 to 10 ppm available chlorine. Add 11 fl. oz. of this product per 10,000 gallons in the system to obtain 5 to 10 ppm available chlorine.

- When microbial control is evident, add 11 fl. oz. of this product per 10,000 gallons in the system to obtain 5 to 10 ppm available chlorine. Add 11 fl. oz. of this product per 10,000 gallons in the system to obtain 5 to 10 ppm available chlorine.

PUBLIC WATER SYSTEMS

INTERMITTENT FEED METHOD: Initial Dose: When system is noticeably fouled, apply 52 to 104 fl. oz. of this product per 10,000 gallons of water in the system to obtain from 5 to 10 ppm available chlorine. Repeat until control is achieved.

COOLING TOWER/EVAPORATIVE CONDENSER WATER

- Pump water at a rate of 200 to 400 gallons per minute to continue under pressure while injecting this product by means of a hypochlorinator. Stop water flow for intermittent feeding. Do not use a direct water stream. Use water spray to inject this product in the water. Do not use a direct water stream. Use water spray to inject this product in the water. Do not use a direct water stream. Use water spray to inject this product in the water.

EMERGENCY DISINFECTION AFTER MAIN BREAKS

- After the container is empty, store at room temperature. Nonrefillable container. Do not reuse or refill this container. Offer for recycling if available. Clean equipment to relieve pressure. Loosen closure cautiously when opening and replace closure after each withdrawal. Do not contaminate food by storage, disposal or cleaning of equipment.

- Keep container closed

- Alkaline solution is neutralized by adding a suitable acid. Add 10% of the capacity of the disinfecting solution to the effluent or 10% of the capacity of the disinfectant solution to the effluent. Neutralize the effluent by adding a suitable acid. Add 10% of the capacity of the disinfecting solution to the effluent or 10% of the capacity of the disinfectant solution to the effluent.
