**HOW MUCH TO APPLY:**

**For Kentucky Bluegrass, Fescue spp., perennial Ryegrass, Bermudagrass, and Zoysiagrass:—**

Apply 132.0 – 158.4 pounds of this product per acre of established turfgrass. Or the equivalent application rates are 3.0 – 3.6 pounds of product per 1,000 square feet of turfgrass.

The maximum application rate to turf is 1.0 pounds 2,4-D acid equivalent per acre per application per site. The maximum number of broadcast applications per treatment site is 2 per year.

Sequential or follow-up applications may be required for dense infestations of perennial and biennial weeds. Also, adverse environmental conditions prior or after application may reduce the effectiveness. If required, the treatment interval between the first and second applications should be approximately 30 days.

**Application Suggestions**

Spring and fall applications are recommended for the best control. However, this product may be applied any time broadleaf weeds are present and actively growing.

Mow the turfgrass 2 to 3 days before application.

Water the turfgrass thoroughly (>1/2 inch) at least 1 to 2 days before application.

Schedule applications in the morning when dew is present. Or sprinkle or irrigate lightly (<1/4 inch) before application to provide maximum control.

Rainfall or irrigation within 24 hours after application may reduce the effectiveness. Do not irrigate or water the turfgrass within 24 hours after application.

**Suggested Spreader Settings**

These spreader settings are for use with new equipment at average walking speed and level terrain. A used spreader may need calibration. Many factors, such as incorrect settings, walking speed, terrain, wear, spreader calibration and general condition of the spreader can affect the rate of application. Since these conditions are beyond our control, neither the formulator nor the retail merchant can guarantee exact coverage as indicated by the recommended spreader settings. If you have reason to believe that your spreader is not calibrated correctly, test apply by placing the amount needed to cover 500 square feet into your spreader and apply to a premeasured 500 square feet area. If you run out before covering the premeasured area, decrease the spreader setting. If additional product is left in spreader hopper, increase the spreader setting. For further assistance, refer to your Spreader Guide.
