RESTRICTED USE PESTICIDE
For fish, mammals, and Aquatic Organisms.
For retail sale to and use only by certified applicators or persons under their direct supervision.
and only for those uses covered by the certified applicator certification.

**Timectin™ 0.15 EC Ag**
Insecticide/Miticide

**ACTIVE INGREDIENT:**
Azamethiphos: 1.9%

**OTHER INGREDIENTS:**
Water: 98.1%

**TOTAL:**
100.0%

Timectin™ 0.15 EC Ag Insecticide/Miticide contains 0.15 lbs active ingredient per gallon.

**KEEP OUT OF REACH OF CHILDREN**
**WARNING**

Shelved in a manner to prevent unauthorized access.

See next page for First Aid, Precautionary Statements, and Directions for Use.

**NOTE TO PHYSICIAN:**
Early signs of intoxication include dilatation of pupils, muscular incoordination, and muscular tremors. Toxicity following accidental ingestion of this product can be minimized by early administration of charcoal, activated.

If toxicity from exposure has progressed to cause severe vomiting, the extent of resultant fluid and electrolyte imbalance should be gauged. Appropriate supportive and fluid replacement therapy should be given.

In severe cases, observations should continue for at least several days until clinical condition is stable and normal. Since abamectin is believed to enhance GABA activity in animals, it is probably wise to avoid drugs that enhance GABA activity (lithium, buspirone, allopurinol) in patients with potentially toxic abamectin exposure.

---

**FIRST AID**

**If in eyes:**
- Hold eye open and rinse slowly and gently with water for 15-20 minutes.
- Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
- Call a poison control center or doctor for treatment advice.

**If swallowed:**
- Call a poison control center or doctor immediately for treatment advice.
- Have person sip a glass of water if able to swallow.
- Do not induce vomiting unless told to do so by the poison control center or doctor.
- Do not give anything by mouth to an unconscious person.

**If on skin or clothing:**
- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15-20 minutes.
- Call a poison control center or doctor for treatment advice.

**If inhaled:**
- Move person to fresh air.
- If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible.
- Call a poison control center or doctor for further treatment advice.

**HOT LINE NUMBER**

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also call Chemos at 1-800-424-9300 for emergency medical treatment information.
PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
WARNING
Causes substantial but temporary eye injury. Do not get in eyes. Harmful if absorbed through skin or if swallowed. Avoid contact with skin or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, or using tobacco. Remove and wash contaminated clothing before reuse.

Personal Protective Equipment
Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for Category E on an EPA chemical resistance category selection chart.

Applicators and other handlers must wear:
- Long-sleeved shirt and long pants
- Socks and shoes
- Chemical-resistant gloves (such as barrier laminate, nitrile rubber, neoprene rubber, etc.)
- Protective eyewear

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. Do not reuse them. Follow manufacturer's instructions for decontaminating PPE. If no such instructions for washable, use detergent and hot water. Keep and wash PPE separately from other laundry.

<td>- Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.</td>
</tr>
<tr>
<td>- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.</td>
</tr>
</tbody>
</table>

ENVIRONMENTAL HAZARDS
This pesticide is toxic to fish and wildlife. Do not apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not apply when weather conditions favor drift from target areas. Do not contaminate water when disposing of equipment or wash water or rinse. This product is highly toxic to bees exposed to direct treatment or residues on blooming crops or weeds. Do not apply this product or allow it to drift to blooming crops or weeds if bees are visiting the treatment area.

Use of this product may pose a risk to threatened and endangered species of fish, amphibians, crustaceans (including freshwater shrimp), and insects. All use of this product in the state of California should comply with the recommendations of the California Endangered Species Project. Before using this product in California, consult with your county agriculture commissioner to determine use limitations that apply in your area.

PHYSICAL OR CHEMICAL HAZARDS
Combustible: Do not use or store near heat or open flame.

DIRECTIONS FOR USE
It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

IMPORTANT – READ BEFORE USE
Read the entire Directions for Use, Limited Warranty and Disclaimer before using this product.

If terms are not acceptable, return the unopened product container at once. By using this product, user or buyer accepts the following warranty disclaimer, inherent risks of use and limitation of remedies.

AGRICULTURAL USE REQUIREMENTS
Use this product only in accordance with its labeling and with the Worker Protection Standard 40 CFR Part 190. This standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 12 hours.

PPE required for entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is:
- Coveralls over short-sleeved shirt and short pants.
- Chemical-resistant gloves - EPA chemical-resistance category E (e.g., barrier laminates, nitrile rubber, neoprene rubber, viton).
- Chemical-resistant shoes and socks.
- Protective eyewear.

**FAILURE TO FOLLOW DIRECTIONS AND PRECAUTIONS ON THIS LABEL MAY RESULT IN CROP INJURY, POOR INSECT CONTROL, AND/OR ILLEGAL RESIDUES.**

Timedrin 0.15 EC Ag Insecticide/Milicide is an insecticide that will control certain insect pests. The product must be mixed with water and applied to labeled crops according to the specific crop use directions for effective control of these insects. For good rate and insect control, Timedrin 0.15 EC Ag Insecticide/Milicide needs to be applied so that the foliage is thoroughly covered by the spray solution.

**Phytotoxicity:** Timedrin 0.15 EC Ag Insecticide/Milicide has been tested for phytotoxicity and has been proven to be safe on a variety of crops. Timedrin 0.15 EC Ag Insecticide/Milicide is also compatible with many commonly used pesticides, crop oils, and nutritional sprays. However, it is impossible to test all crop varieties and combinations of spray mixtures under all possible growing conditions. Prior to mixing, users should test the compatibility of Timedrin 0.15 EC Ag Insecticide/Milicide with any combination product using physical compatibility jar tests. Below applying Timedrin 0.15 EC Ag Insecticide/Milicide and combination products to large areas of the crop, test small areas for phytotoxicity.

**New York State Restrictions:** Do not apply Timedrin 0.15 EC Ag Insecticide/Milicide by aerial application in New York State.

**Chemigation:** Do not apply this product through any type of irrigation system.

**Spray Drift Precautions for Timedrin 0.15 EC Ag Insecticide/Milicide Use on Celery, Cotton, Cucurbits, Foliage Vegetables, Grapes, Hops, Leafy Vegetables, Potatoes, and Strawberries:**
- Do not apply with ground application equipment within 25 ft. or with aircraft within 100 ft. of lakes, reservoirs, rivers, permanent streams, marshes, ponds, natural ponds, and estuaries, or commercial fish farm ponds.
- All aerial and ground application equipment must be properly calibrated, using appropriate calibrators, and maintained. For aerial applications, mount the spray boom on the aircraft in a manner that minimizes drift caused by wing tip vortices. Use the minimum practical boom length but do not exceed 75% of wing span or rotor diameter.
- Use the largest droplet size consistent with pest control. Minimize the formation of very small droplets by selecting appropriate nozzles, orienting nozzles away from the air stream as much as possible, and avoiding excessive spray boom pressure. Release the spray at the lowest height consistent with good control and flight safety. Avoid application more than 10 ft. above the crop canopy.
- Make all ground applications when wind velocity favors on-target product deposition. Avoid applications when wind velocity exceeds 15 mph. Avoid applications when wind direction is favorable to the aquatic area. Reduce risk of exposure to aquatic areas. Do not cultivate within 25 ft. (10 ft. for cotton) of the aquatic area to allow growth of a vegetative filter strip.
- Low humidity and high temperatures increase the evaporation rate of spray droplets and thereby increase the likelihood of spray drift to aquatic areas. Avoid spraying during conditions of low humidity and high temperature.
- Do not make aerial or ground applications during temperature inversions. Inversions are characterized by stable air and temperatures that increase with height above the ground. Mist or fog may indicate the presence of an inversion in humid areas. The operator may detect the presence of an inversion by producing smoke and observing a smoke layer near the ground surface.

**Resistance Management:** Timedrin 0.15 EC Ag Insecticide/Milicide contains the active ingredient abamectin. There are inherent risks of pests developing resistance to any product, therefore, it is strongly advised that Timedrin 0.15 EC Ag Insecticide/Milicide be used in a sound resistance management program (including practices such as non-chemical alternatives (beneficial arthropods), rotation of Timedrin 0.15 EC Ag Insecticide/Milicide with insecticides that have different modes of action, rotation of susceptible and non-susceptible plants, etc.). Once insect or mite-tolerant strains develop, Timedrin 0.15 EC Ag Insecticide/Milicide will not be effective against labeled pests. In crops that have pests with multiple generations per crop per year, resistance management practices help reduce the risk of resistance development to Timedrin 0.15 EC Ag Insecticide/Milicide. Additional information is available on implementation of these or other resistance management practices from your local agricultural advisor or company representative.
CROP USE DIRECTIONS

ALMONDS AND WALNUTS

Timacin 0.15 EC Ag Insecticide/miticide will control the following pests in almonds and walnuts:

European red mite
Pacific Spider mite
Texas/Twospotted spider mite

Rate of Timacin 0.15 EC Ag Insecticide/miticide | Directions for Application | Restrictions
--- | --- | ---
For Dilute Sprays: 2.5 - 6.0 fl. oz./100 gals | Apply Timacin 0.15 EC Ag Insecticide/miticide using conventional dilute or concentrate sprays using ground application equipment. Calibrate equipment prior to application to ensure sufficient water is used for thorough coverage. The size and number of trees per acre as well as foliage density will determine the gallons of spray required. Apply only in 40 gals. or more of water. Control of these mites/insects requires thorough coverage of the spray solution on the tree foliage, and residual spider mite control increases if sprays are made to younger leaves. Time Timacin 0.15 EC Ag Insecticide/miticide applications to occur when spider mites 1st appear. | Do not apply by air. Do not apply Timacin 0.15 EC Ag Insecticide/miticide without VNTRE or a horticultural spray oil that is not a dormant oil (but one that is approved for use on almonds and walnuts). Do not apply more than 20 fl. oz. Timacin 0.15 EC Ag Insecticide/miticide per application, and no more than 40 fl. oz. per growing season. Make only 2 applications per growing season 21 days or more apart. Do not allow livestock to graze in treated orchards. Preharvest Interval: 21 days.
For Concentrate Sprays: 10 - 20 fl. oz./A | PLUS VNTRE OR A Horticultural Spray Oil that is not a dormant oil | Minimum of 1 g/l.A

Rate of Timacin 0.15 EC Ag Insecticide/miticide | Directions for Application | Restrictions
--- | --- | ---
For Dilute Sprays: 0.25% or 1 g/l.A | Repeat applications following the directions in the Restrictions column of this table. | * Dilute Spray Rate is based on a volume of 400 gals./A of a dilute spray. * Concentrate Spray Rate: Determine the amount of Timacin 0.15 EC Ag Insecticide/miticide required in a full cover dilute spray. Then use the same amount of product per acre in concentrate sprays that would be required for the dilute sprays to the same orchard/grove. Note that for small trees, the amount may be less than 10 fl. oz./A.

Buffer Zones: To reduce the risk to aquatic organisms, maintain a 25-yard buffer zone around all water bodies containing aquatic life (streams, ponds, lakes, rivers, springs, irrigation canals containing water year-round, swamps, bogs and marshes).

APPLES

Timacin 0.15 EC Ag Insecticide/miticide will control the following pests in apples:

European red mite
McDaniel spider mite
Tetramychus marmoratus
Texas/Twospotted spider mite
White apple leafhopper

Rate of Timacin 0.15 EC Ag Insecticide/miticide | Directions for Application | Restrictions
--- | --- | ---
For Dilute Sprays: 2.5 - 5.0 fl. oz./100 gals | Apply Timacin 0.15 EC Ag Insecticide/miticide using conventional dilute or concentrate sprays using ground application equipment. Calibrate equipment prior to application. | Do not apply by air. Reduced efficacy and/or residual control may occur if Timacin 0.15 EC Ag Insecticide/miticide is not applied in accordance with the directions above.
For Concentrate Sprays: 10 - 20 fl. oz./A

<td>Sprays—use the concentrate spray rate</td>
<td>Thorough coverage (outside coverage for Asian citrus psylla, citrus leaffminer or citrus thrips). The size and number of trees per acre as well as foliage density will determine the gallons of spray required. Asian citrus psylla: Applications made in the spring, summer or fall should be directed at newly expanding foliage and will only control adults and nymphs present at the time of application. Citrus leaffminer: Applications made in the spring, summer or fall should be directed at newly expanding foliage. Citrus thrips: Correct timing is required. Apply after egg hatch has begun (typically, early in milk to 1st instar). but only the current generation will be controlled.</td>
<td>Do not apply more than 3 applications per growing season 30 days or more apart. Do not apply to Timectin 0.15 EC Ag Insecticide/Miticide. Do not apply in citrus nurseries. Do not allow livestock to graze in treated orchards. Preharvest interval: 7 days</td>
</tr>
</tbody>
</table>

* Dilute Spray Rate is based on a volume of 1,000 gallons/acritate spray.  
* Concentrate Spray Rate: Determine the amount of Timectin 0.15 EC Ag Insecticide/Miticide that would be required in a full concentrate spray.  
* A concentrated spray rate is 20.0 lbs. of a 10.0% concentrate.  
* For optimum control of Asian citrus psylla, brown citrus, citrus rust mites and citrus leaffminers, apply 150-300 gal spray mix per acre plus CROCIT, VINTRE or CITRI KING or a minimum of 3 gal./A of a herbicidal oil (not a dormant oil) and apply using ground equipment at 1 to 1.5 miles per hour.

---

For optimum control of citrus bud mite, apply Timectin 0.15 EC Ag Insecticide/Miticide in a minimum of 550 gal. per acre plus CROCIT, VINTRE or CITRI KING or a minimum of 2 qt. (0.5%) per acre of a herbicidal oil (not a dormant oil). For optimum control of citrus thrips, use 100-250 gal. per acre spray mix for best coverage of outside foliage.

**Spray drift precautions:** Observe the following precautions when spraying in the vicinity of aquatic areas such as lakes, rivers, permanent streams, marshes or natural ponds, estuaries, and commercial fish farms:

- Spray last 3 rows upwind of aquatic areas using nozzles on one side only, with spray directed away from aquatic areas
- Avoid spray going over tops of trees by adjusting or turning off top nozzles. SHUT off nozzles on the side away from the grove/field when spraying the outside row. SHUT off nozzles when turning at ends of row and passing tree tops in rows.
- Do not apply Timectin 0.15 EC Ag Insecticide/Miticide when weather conditions favor drift to aquatic areas.
- Do not apply within 110 feet upwind of aquatic areas or when wind speed is above 8 miles per hour.
- Do not apply during a temperature inversion.

---

**COTTON – WEST OF THE MISSISSIPPI ONLY**

Timectin 0.15 EC Ag Insecticide/Miticide will control the following pests (West of the Mississippi Only):

- Cotton spider mites
- Pacific spider mites
- Tetranychus cinnabarinus

**Rate of Timectin 0.15 EC Ag Insecticide/Miticide**

| Early season: 4 – 6 ft. /A | Mid-season/Lay-by: 8 – 10 ft. /A |

Calibrate equipment prior to application to ensure sufficient water is used for thorough coverage. Control of mites requires a thorough coverage of the spray solution on the crop foliage.

**Restrictions**

Refer to the section on Spray Drift Precautions of this label. Do not apply through any type of irrigation system.

FRUITING VEGETABLE CROP GROUP

Timecin 0.15 EC Ag Insecticide/Miticide will control the following pests in the Fruiting Vegetable Crop Group (which includes but is not limited to: tomatoes; eggplant; peppers [includes bell pepper, chili pepper, cooking pepper, pimiento, sweet pepper]; and tomatillo; Broad leaf
Colocasia: potato beetles
Liriomyza: leafminers
Spider mites
Thrips: petioles
Tomato pinworm
Tomato russet mite
Potato psyllid (peppers only; provides suppression only)

</tr>
</tbody>
</table>

**Rate of Timectin 0.15 EC Ag Insecticide/Miticide**

For Dilute Sprays: 2.5 - 5.0 fl oz/100 gals
For Concentrate Sprays: 0.25% or 1 gal/A
And add (for best results)
A Horticultural Spray Oil that is not a dormant oil

Dilute or concentrate sprays using ground application equipment. Calibrate equipment prior to application to ensure sufficient water is used for thorough coverage. The size and number of trees per acre as well as foliage density will determine the gallons of spray required. Apply only in 40 gals. or more of water. Control of these mites/insects requires a thorough coverage of the spray solution on the tree foliage. Time Timectin 0.15 EC Ag Insecticide/Miticide applications to occur when spider mites first appear or when insect thresholds are reached. Repeat applications following the directions in the Restrictions column of this table.

residual control may occur if Timectin 0.15 EC Ag Insecticide/Miticide is not applied with a horticultural spray oil (not a dormant oil). Follow all directions on the spray oil label or spray guides. In some cases, phytotoxicity and crop loss has been observed when Timectin 0.15 EC Ag Insecticide/Miticide plus a horticultural spray oil was applied in less than 14 days before or after a captafol application. Do not apply more than 20 fl. oz. Timectin 0.15 EC Ag Insecticide/Miticide per application, and no more than 40 fl. oz. per growing season. Make only 2 applications per growing season 21 days or more apart. Do not allow livestock to graze in treated orchards. Preharvest Interval: 28 days
**PLUMS AND PRUNES**

Timedin 0.15 EC Ag Insecticide/Miticide will control the following pests in plums and prunes:

- European red mite
- Pacific spider mite
- Two-spotted spider mite

<table>
<thead>
<tr>
<th>Rate of Timedin 0.15 EC Ag Insecticide/Miticide</th>
<th>Directions for Application</th>
<th>Restrictions</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>For Ultra Sprayer:</strong> 2.5 - 5.0 fl. oz/100 gals</td>
<td>Apply Timedin 0.15 EC Ag Insecticide/Miticide using conventional dilute or concentrate sprays using ground application equipment</td>
<td>Do not apply by air.</td>
</tr>
</tbody>
</table>

**Rate of Timedin 0.15 EC Ag Insecticide/Miticide**

- For Concentrate Sprays: 10 - 20 fl. oz/A
  - PLUS VINTRE
  - OR A Horticultural Spray OR that is not a dormant oil
- For Dilute Sprays: 0.25% or 1 gal/A
- For Concentrate Sprays: Minimum of 1 gal/A
  - Nonionic surfactant (at the manufacturer’s recommended label rate)

Calibrate equipment prior to application to ensure sufficient water is used for thorough coverage. The size and number of trees per acre as well as foliage density will determine the gallons of spray required. Apply only in 40 gals. or more of water/A. Control of these mite species requires a thorough coverage of the spray solution on the tree foliage.

Always use Timedin 0.15 EC Ag Insecticide/Miticide with VINTRE, a nonionic surfactant or a horticultural spray oil (not a dormant oil). The combination of Timedin 0.15 EC Ag Insecticide/Miticide and the nonionic surfactant helps to provide an even coverage of spray on the foliage and to improve the wetting and penetration of leaves for better insect control. Not all combinations of nonionic surfactants and Timedin 0.15 EC Ag Insecticide/Miticide have been tested on every plum/prune variety or under all types of growing conditions. Before using a nonionic surfactant, carefully read and follow the surfactant product’s label.

Do not apply more than 20 fl. oz. Timedin 0.15 EC Ag Insecticide/Miticide per application, and no more than 40 fl. oz. per growing season. Make only 2 applications per growing season 21 days or more apart. Do not allow livestock to graze in treated orchards. Preharvest interval: 21 days
Rate of Timectin 0.15 EC Ag Insecticide/Miticide | Directions for Application | Restrictions
--- | --- | ---
Efficacy may be improved with a combination of Timectin 0.15 EC Ag Insecticide/Miticide and a horticultural spray oil (not a dormant oil). However, the chances of phytotoxicity to fruit and foliage increase with this combination. Apply at the recommended rates in this table.

Time Timectin 0.15 EC Ag Insecticide/Miticide applications to occur when berries first appear. Repeat applications following the directions in the Restrictions column of this table.

* Dilute Spray Rate is based on a volume of 400 gals/acre of dilute spray.
* Concentrate Spray Rate: Determine the amount of Timectin 0.15 EC Ag Insecticide/Miticide required in a full cover dilute spray. Then use the same amount of product per acre in concentrate sprays that would be required for the dilute sprays to the same orchard/zone. Note that for small trees, the amount may be less than 10 fl. oz./A.

Spray Drift Precautions: Observe the following precautions when spraying in the vicinity of aquatic areas such as lakes, rivers, permanent streams, marshes or natural ponds, estuaries, and commercial fish farms:
- Spray last 3 rows upwind of aquatic areas using nozzles on one side only, with spray directed away from aquatic areas.
- Avoid spray going over tops of trees by adjusting or turning off top nozzles. Shut off nozzles on the side away from the grove/field while spraying the outside row. Shut off nozzles when turning at ends of row and passing tree gaps in rows.

---

Do not apply Timectin 0.15 EC Ag Insecticide/Miticide when weather conditions favor drift to aquatic areas.
Do not apply within 100 feet upwind of aquatic areas or when wind speed is above 8 miles per hour.
Do not apply during a temperature inversion.

---

**POTTED PLANTS**

Timectin 0.15 EC Ag Insecticide/Miticide will control the following pests in potables:
- Colorado potato beetle
- Lonthryza leonina
- Spider mites

---

Rate of Timectin 0.15 EC Ag Insecticide/Miticide | Directions for Application | Restrictions
--- | --- | ---
Apply Timectin 0.15 EC Ag Insecticide/Miticide using ground or air application equipment. Although aerial application is permitted, best control of pests is achieved with ground applications which provide better spray coverage. The user accepts all liability for mix level and duration of control if Timectin 0.15 EC Ag Insecticide/Miticide is applied by air.
Calibrate equipment prior to application to ensure sufficient water is used for thorough coverage. Control of these pests is achieved through thorough coverage of the spray solution on the crop foliage.

Refer to the section on Spray Drift Precautions of this label.
Do not apply Timectin 0.15 EC Ag Insecticide/Miticide by air in the State of New York.
Do not apply more than 32 fl. oz./A Timectin 0.15 EC Ag Insecticide/Miticide to control spider mites or Colorado potato beetle, or more than 48 fl. oz./A to control leonina.
Make only 2 sequential applications 7 days or more apart.

</tr>
</tbody>
</table>

**STORAGE AND DISPOSAL**

Do not contaminate water, food, or feed by storage or disposal. Open dumping is prohibited. Do not reuse empty container.

**Pesticide Storage**
Store in a tightly closed container in a cool, dry place.

**Pesticide Disposal**
Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility. Pesticide spray mixtures or rinse water that cannot be used should be disposed of in a landfill approved for pesticides. Improper disposal of excess pesticide spray mixtures or rinse water is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency or the Hazardous Waste representative at the nearest EPA Regional Office for guidance.

**Container Disposal**
Nonrefillable container. Do not reuse or refill this container. Offer for recycling if available. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container ¾ full with water and recap. Shake for 10 seconds. Pour rinse into application equipment or a mix tank or some rinseate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times.

**LIMITED WARRANTY AND DISCLAIMER**

Tide International USA warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated on the label when used in strict accordance with the directions, subject to the inherent risks set forth below.

Our directions for use of this product are based upon tests believed to be reliable. The use of this product beyond control of the manufacturer, no guarantee, expressed or implied, is made as to the effects of such use or the results to be obtained if not used in accordance with printed directions and established safe practice. To the extent consistent with applicable law, buyer's exclusive remedy and manufacturer's or seller's exclusive liability for any and all claims, losses, damages or injuries resulting from the use or handling of this product, whether or not based in contract, negligence, strict liability in tort or otherwise shall be limited, at the manufacturer's option to replacement of, or the repayment of the purchase price for, the quantity of product with respect to which damages are claimed.

Inherent Risks of Use
It is impossible to eliminate all risks associated with use of this product. Crop injury, lack of performance, or other unintended consequences may result because of such factors as use of the product contrary to label instructions (including conditions noted on the label, such as unfavorable temperatures, soil conditions, etc.), abnormal conditions (such as excessive rainfall, drought, tomatoes, hurricanes), presence of other materials, the manner of application, or other factors, all of which are beyond the control of Tide International USA or the seller. All such risks shall be assumed by buyer.
Terms and Conditions of Use
If terms of the Limited Warranty & Disclaimer and Inherent Risks of Use are not acceptable, return unopened package at once to the seller for a full refund of purchase price paid. Otherwise, use by the buyer or any other user constitutes acceptance of the terms under Warranty Disclaimer and Inherent Risks of Use.
