KEEP OUT OF REACH OF CHILDREN
CAUTION
SEE NEXT PAGE FOR ADDITIONAL PRECAUTIONARY STATEMENTS.
FIRST AID
If swallowed: Call a poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to by a poison control center or doctor. Do not give anything by mouth to an unconscious person.

HOT LINE NUMBERS
Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact 800-335-4473 for emergency medical treatment information.

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS & DOMESTIC ANIMALS
CAUTION
Harmful if swallowed.

PERSONAL PROTECTIVE EQUIPMENT (PPE)
All mixers, loaders, applicators and other handlers must wear:
• Long-sleeved shirt and long pants, shoes plus socks and chemical-resistant gloves such as barrier laminate, butyl rubber > 14 mils, nitrile rubber > 14 mils, neoprene rubber > 14 mils, natural rubber > 14 mils, polyethylene, polyvinyl chloride > 14 mils or Viton > 14 mils. Follow the manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

USER SAFETY RECOMMENDATIONS
Users should:
• Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet.
• Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
• Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS
This product is toxic to aquatic invertebrates. Do not apply when weather conditions favor drift from treated areas. Drift and runoff may be hazardous to aquatic organisms in neighboring areas. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment washwaters or rinsate.

This product is toxic to bees exposed to treatment and for more than 5 days following treatment. Do not apply this product to blooming, pollen-shedding or nectar-producing parts of plants if bees may forage on the plants during this time period.

In the State of Florida: The properties of this chemical suggest it may leach into ground water if used in areas where soils are permeable and where the water table is very shallow. Do not apply within 25-feet of lakes, reservoirs, rivers, permanent streams, marshes, natural ponds, estuaries or commercial fish farm ponds.

PROTECTION OF POLLINATORS
APPLICATION RESTRICTIONS
EXIST FOR THIS PRODUCT BECAUSE OF RISK TO BEES AND OTHER INSECT POLLINATORS. FOLLOW APPLICATION RESTRICTIONS FOUND IN THE DIRECTIONS FOR USE TO PROTECT POLLINATORS

Look for the bee hazard icon in the Directions for Use for each application site for specific use restrictions and instructions to protect bees and other insect pollinators.

This product can kill bees and other insect pollinators.

Bees and other insect pollinators will forage on plants when they flower, shed pollen or produce nectar.

Bees and other insect pollinators can be exposed to this pesticide from:
• Direct contact during foliar applications, or contact with residues on plant surfaces after foliar applications.
• Ingestion of residues in nectar and pollen when the pesticide is applied as a seed treatment, soil, tree injection, as well as foliar applications.

PROTECTION OF POLLINATORS (continued)
WHEN USING THIS PRODUCT TAKE STEPS TO:
• Minimize exposure of this product to bees and other insect pollinators that are foraging on pollinator attractive plants around the application site.
• Minimize drift of this product onto beehives or to off-site pollina
tor attractive habitat. Drift of this product onto beehives or off-site to pollinator attractive habitat can result in bee kills. Infor
tation on protecting bees and other insect pollinators may be found at the Pesticide Environmental Stewardship website at: http://pesticidestewardship.org/pollinatorprotection/Pages/
default.aspx.

Pesticide incidents (for example, bee kills) should immediately be reported to the State/Tribal lead agency. For contact infor
mation for your State/Tribe, go to: www.aspo.org. Pesticide incidents should also be reported to the National Pesticide Infor
mation Center at: www.npic.orst.edu or directly to EPA at: bee.kill@epa.gov.

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsis
tent with its labeling.

READ ENTIRE LABEL. USE STRICTLY IN ACCORDANCE WITH PRECAUTIONARY STATEMENTS AND DIRECTIONS AND WITH APPLI
CABLE STATE AND FEDERAL REGULATIONS.

Do not apply this product in any way that will contact workers or other persons either directly or through drift. Only protected han
dlers may be in the area during application. For any requirements speciﬁc to your State/Tribe, consult the agency responsible for pesticide regulation.

BEE HAZARD
See individual crops for speciﬁc pollinator protection application restrictions. If none exist under the speciﬁc crop, for falli
ar applications, follow these application directions for crops that are con
tracted to have pollinator services or for food/feed that are attrac
tive to pollinators:

FOR CROPS UNDER CONTRACTED POLLINATION SERVICES
Do not apply this product while bees are foraging. Do not apply this product until flowering is complete and all petals have fallen unless the following condition has been met.

If an application must be made when managed bees are at the treatment site, the beekeeper providing the pollination services must be notified no less than 48 hours prior to the time of the planned application so that the bees can be removed, covered or otherwise protected prior to spraying.

Bees must be removed, covered or otherwise protected for 5 days following application.

FORAGE CROPS AND COMMERCIALLY GROWN FUNDAMENTALS NOT UNDER CONTRACT FOR POLLINATION SERVICES BUT ARE ATTRACTIVE TO POLLINATORS

This product is toxic to bees exposed to treatment for more than 5 days following treatment. Do not apply this product to blooming, pollen-shedding or nectar-producing parts of plants if bees may forage on the plants during this time period.

AGRICULTURAL USE REQUIREMENTS
Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 190. This standard con
tains requirements for the protection of agricultural workers on farms, forests, nurseries and greenhouses and handlers of agri
cultural pesticides. It contains requirements for training, decon
amination, notification and emergency assistance. It also con
tains specific instructions on this label about personal protective equipment (PPE), notification to workers and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow entry into treated areas during the restrict
ed entry interval (REI) of 12 hours.

PPE required for entry into treated areas that is permitted under the Worker Protection Standard and that involves contact with any
thing that has been treated, such as plants, soil or water is: cover
alls, shoes plus socks, chemical-resistant gloves made of any water
proof material.
Belay Insecticide contains clothianidin, which is classified in the Group 4A of insecticide classes. Insect biotypes that have developed insensitivity to Group 4A (neonicotinoid) insecticides can eventually dominate the insect population in the same field. That is most likely to happen when Group 4A insecticides are used repeatedly in the same field or in successive years as the primary method of control for targeted species. This may result in partial or total loss of control of those species by Belay Insecticide or other Group 4A insecticides.

To delay insecticide resistance consider:

- Avoiding the consecutive use of Belay Insecticide or other Group 4A insecticides that have a similar target site of action on the same insect species and/or insect species inadvertently exposed to the applications (non-target pests).
- Using tank mixes or premixes with insecticides from a different class of chemistry, which must be registered products for the same commodity and use pattern, with different sites of action to help reduce the generation of resistance.
- Do not make foliar applications of neonicotinoid insecticides or other Group 4A insecticides that have a similar target site of action in partial or total loss of control of those species by Belay Insecticide or other Group 4A insecticides.

Insecticide is an insecticide for broad spectrum control of insects infesting cotton, cucurbits, fig, grape, leafy vegetables (including brassica vegetables), peach, pome fruit, pomegranate, rice, soybean, and/or manufacturer for insecticide resistance management.

RESTRICTIONS

Belay Insecticide is an insecticide for broad spectrum control of insects infesting cotton, cucurbits, fig, grape, leafy vegetables (including brassica vegetables), peach, pome fruit, pomegranate, rice, soybean, and/or manufacturer for insecticide resistance management.

ROTATIONAL CROP PLANT-BACK INTERVALS

* For states of AR, CA, LA, MO, MS and TX only

Spray Drift Management

Observe the following requirements when spraying in the vicinity of aquatic areas such as, but not limited to, lakes, reservoirs, rivers, permanent streams, marshes or natural ponds, estuaries and commercial fish ponds.

DRIPET USE: Size: Use the largest droplet size consistent with acceptable efficacy. Formation of very small droplets may be minimized by appropriate nozzle selection, by orienting nozzles away from the air stream as much as possible, and by avoiding excessive spray boom pressure. For groundboom and aerial application, use medium or coarser spray nozzles according to ASAE (S353) definitions for standard nozzles, or a volume mean diameter (VMD) of 380 microns or greater for spinning atomizer nozzles. In conditions of low humidity and high temperatures, applicator should use a coarser droplet size.

Wind Direction and Speed: Track the wind direction and speed, and spray only in line with the wind's direction.

Temperature Inversion: Do not make aerial or ground applications into areas of temperature inversions. Inversions are characterized by stable air and increasing temperatures with increasing distance above the ground. Mist or fog may indicate the presence of an inversion in humid areas. Where permissible by local regulations, the applicator may detect the presence of an inversion by producing smoke and observing a smoke layer near the ground surface. In conditions of high humidity and high temperature, applicators should use a coarser droplet size.

Additional Requirements for Ground Applications: Spray should be released at the lowest height consistent with pest control and flight safety. Avoid applying more than 10 feet above the crop canopy should be avoided. For groundboom applications, apply with nozzle height no more than 4 feet above the ground or crop canopy.

Additional Requirements for Aerial Applications: For aerial applications, the spray boom should be mounted on the aircraft as to minimize drift caused by wingtip or rotor vortices. The minimum practical boom length should be used and must not exceed 75% of the Boom.
wing span or 90° rotor diameter. Aerial applicators must consid-
er flight speed and nozzle orientation in determining droplet size. When applications are made with a cross-wind, the swath will be displaced downwind. The applicator must compensate for this dis-
placement at the downwind edge of the application area by adjust-
ing the path of the aircraft upward.

**APPLICATION PROCEDURES**

**Fertilizer Application**

Select spray nozzles which will provide accurate and uniform spray deposition. Use spray nozzles which provide medium sized droplets and reduce drift. To help ensure accuracy, calibrate sprayer before each use. For information on spray equipment and calibration, con-
sult nozzle manufacturers and/or State and County Extension Service.

Apply Belay Insecticide using sufficient water volume to provide thorough and uniform coverage. In situations where a dense canopy exists and/or pest pressure is high, use greater water volumes. The use of a spray admixture may improve spray coverage. Do not make applications under conditions where uniform coverage cannot be obtained or where excessive spray drift may occur.

**Aerial Application for Cotton, Potato, Rice and Soybean Only**

Apply Belay Insecticide with the required amount of carrier to pro-
vide thorough coverage of the crop’s foliage. Applications by air-
way to be done using a minimum of 3 gallons per acre. Do not apply Belay Insecticide when the risk of excessive drift is expected due to

temperatures, wind patterns and humidity. To prevent drift into

Applications of water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 people.

Belay Insecticide may be applied through irrigation systems which may be supplied by a public water system only if the water from the public water system is discharged into a reservoir, tank, ditch or other water purification or water treatment.

There shall be a complete physical break (air gap) between the out-

edge of the fill pipe and to top or overflow rim of the reservoir.

No application system using water supplied from a public water system shall be designed to operate with water supplied by a public system only if the water from the public water system is cleared all of the injection period. (See “Mixing Instructions” section of this label.)

Insecticide under the schedule specified in the specific

crop rates/ratios, not including the irrigation schedule, unless the events coincide. In general, the equipment to apply

the minimum amount of water per acre. Run the system at 88 to 90%

of the manufacturer’s maximum rated travel speed.

The following calibration and application techniques are provided for user reference, but do not constitute a warranty of fitness for appli-
cation of the equipment.

1. The system must be calibrated to uniformly apply the rates specified.

Belay Insecticide per acre contin-

ners, and sufficient water to meet the injection time requirements to the

solution tanks. (See "Mixing Instructions" section of this label.)

7. Systems must use a metering pump, such as a positive displace-
matic pressure switch which will stop the water pump motor when

the water pressure decreases to the point where pesticide distrib-
utes the injection pump from the system interlock.

4. Add the required amount of Belay Insecticide, and any tank mix part-

ners, to the sprayer tank with water as a separate application not associ-
ated with a regular irrigation system. (See “Mixing Instructions” section of this label.)

20 to 40 minute period at the end of a regular irrigation set, or as

on a 20 to 40 minute period at the end of a regular irrigation set, or as

injection equipment after treatment is completed. Contin-

the system and injection equipment is either automatically or manually shut down.

5. The system must contain functional interlocking controls to auto-
matically shut off the pesticide injection pump when the water

water pump motor stops.

6. The injection pump and connected to the system interlock to prevent

fertilizer drift into neighboring crops and bodies of water.

Drift into neighboring crops and bodies of water must be monitored and control measures taken to prevent drift.

Do not apply Belay Insecticide where wind speeds exceed 10 mph and consider droplet size. Smaller droplets,

Do not apply Belay Insecticide under the schedule specified in the specific

RESTRICTIONS
• Do not apply more than 0.075 lb ai/A as a foliar treatment per year.
• Regardless of the application method, do not apply more than 0.2 lb active ingredient clothianidin per acre per year.
• Do not apply Belay Insecticide after third tillering has initiated.
• Do not apply Belay Insecticide following a clothianidin seed treatment application.
• Do not use Belay Insecticide treated rice fields for the aquaculture of edible fish and crustaceans.
• Belay Insecticide is not to be used on rice crops that contain or support crawfish or any form of aquaculture operation.
• Belay Insecticide is not to be used on rice crops near fish farm, shrimp, prawn or crab pond (or nursery) operations - particularly when weather conditions are conducive to drift. Exercise caution with air and ground applications near those operations to avoid product drift.

TUBEROUS AND CORM VEGETABLES

Arrachcha; Arrowroot; Artichoke (including Chinese and Jerusalem); Edible Canna; Cassava (including Bitter and Sweet); Root Chayote; Chufa; Dasheen; Ginger; Leren; Potato; Sweet Potato; Tanier; Turmeric and Yam

FOLIAR APPLICATION

Pests
Aphids
Colorado Potato Beetles
Flea Beetles
Leaffoppers
Potato Psyllids
(Suppression)*
Scarab Beetle (adults)*

Belay Insecticide Application Rates
2 to 3 fl oz/A (0.033 to 0.05 lb ai/A)

Rates/Instructions
Apply Belay Insecticide when target pest(s) threshold populations are observed. Do not wait until population beyond threshold has been established.
Apply Belay Insecticide by ground or air in sufficient water to ensure uniform and thorough coverage of foliage. Use a minimum of 3 gallons per acre for aerial applications.
Colorado Potato Beetles: Belay Insecticide will not control Colorado Potato Beetles in regions where insensitivity to neonicotinoid insecticides has been reported.
Choose the lower rate for light infestation and the higher rate for heavy infestation.

RESTRICTIONS
• Do not apply treatment between 50% row closure and petal fall.
• Do not make more than one application per year prior to 50% row closure.
• Do not apply treatments less than 7 days apart.
• Do not apply within 14 days of harvest.
• Do not apply by air except for potato.

*Except California (continued)

TUBEROUS AND CORM VEGETABLES (continued)

IN-FURROW OR SIDE DRESS APPLICATIONS

Pests
Aphids
Colorado Potato Beetles
Flea Beetles
Leaffoppers
Sugarcane Beetle
Wireworms (except for Corn, Southern Potato and Tobacco Wireworm) (Suppression)*

Belay Insecticide Application Rates
9 to 12 fl oz/A (0.15 to 0.2 lb ai/A)

Rates/Instructions
Broadcast Applications: Broadcast application by ground pre-plant or at planting. Incorporate the Belay Insecticide into the soil. Apply specified rate in sufficient carrier volume to ensure uniform application and incorporate into the soil prior to planting or transplanting.
Directed Applications: As an in-furrow at planting side-dress on both sides of the row at ground-crack during hilling. With ground-crack/hilling application make certain product is covered with at least 3 inches of soil.
Apply specified rate in sufficient carrier volume to ensure uniform application and incorporate into the soil using one of the following methods:
1. In a narrow band centered on the plant row in the bedding operation just prior to planting or transplanting.
2. In-furrow spray at planting or transplanting. Target the application to the bottom part of the furrow. Plant seed pieces, whole potatoes or place transplants immediately after the application.
3. As a side-dress to both sides of the row or as a spray at ground crack directly over the row during hilling. Cover immediately with soil.
4. Chemigation into root zone through drip, trickle or custom made systems that target the watering of the root zone of the plant.
Chemigation from plant emergence to 50 percent row cover. Applications via chemigation targeting above ground pests after 50 percent row cover could result in limited plant uptake via the root system.
Use at least 0.15 inches of water when chemigating Belay Insecticide. For control of aphids, Colorado potato beetle, flea beetles, leafhoppers and psyllids (suppression) apply Belay Insecticide at 9-12 fl oz/A from plant emergence to hilling. Use the highest rate for maximum residual control. Apply in 0.15 to 0.25 inches of water per acre. Use at least 0.16 inch of water when chemigating Belay Insecticide.
Colorado Potato Beetle: Belay Insecticide will not control Colorado Potato Beetles in regions where insensitivity to neonicotinoid insecticides has been reported.
Choose the lower rate for light infestation and the higher rate for heavy infestation.

RESTRICTION
• Regardless of the application method, do not apply more than 0.2 lb active ingredient clothianidin per acre per year.

*Except California (continued)
STORAGE AND DISPOSAL
Do not contaminate water, food or feed by storage and disposal.

PESTICIDE STORAGE
Store in a dry place away from excessive heat.
Do not store near food or feed.
Store in original container only.

PESTICIDE DISPOSAL
To avoid waste, use all material in this container by application according to label directions. If waste cannot be avoided, offer remaining product to a waste facility or pesticide disposal program (often such programs are run by state or local governments or by industry).

CONTAINER HANDLING
Nonrefillable container. Do not reuse or refill this container. Clean and puncture the container and drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Offer for recycling, if available; otherwise dispose of in a sanitary landfill or by incineration.

RECYCLING
Once cleaned, some agricultural plastic pesticide containers can be taken to a container collection site or picked up for recycling. To find the nearest site, contact your chemical dealer or manufacturer, or contact the Ag Container Recycling Council (ACRC) at 877-952-2272 (toll free) or www.acrecycle.org.

DISCLAIMER, RISKS OF USING THIS PRODUCT, LIMITED WARRANTY AND LIMITATION OF LIABILITY

IMPORTANT: Read the entire Label including this Disclaimer, Risks of Using this Product, Limited Warranty, and Limitation of Liability before using this product. If the terms are not acceptable THEN DO NOT USE THE PRODUCT; rather, return the unused product within 15 days of purchase for a refund of the purchase price.

RISKS OF USING THIS PRODUCT
The Buyer and User (referred to collectively herein as ‘Buyer’) of this product should be aware that there are inherent unintended risks associated with the use of this product which is impossible to eliminate. These risks include, but are not limited to, injury to plants and crops to which this product is applied, lack of control of the target pests or weeds, resistance of the target pest or weeds to this product, injury caused by drift, and injury to rotational crops caused by carryover in the soil. Such risks of crop injury, non-performance, resistance or other unintended consequences are unavoidable and may result because of such factors as weather, soil conditions, disease, moisture conditions, irrigation practices, condition of the crop at the time of application, presence of other materials either applied in the tank mix with this product or prior to application of this product, cultural practices or the manner of use or application, (or a combination of such factors) all of which are factors beyond the control of Valent. The Buyer should be aware that these inherent unintended risks may reduce the harvested yield of the crop in all or a portion of the treated acreage, or otherwise affect the crop such that additional care, treatment and expense are required to take the crop to harvest. If the Buyer chooses not to accept these risks, THEN THIS PRODUCT SHOULD NOT BE APPLIED. By applying this product Buyer acknowledges and accepts these inherent unintended risks AND TO THE FULLEST EXTENT ALLOWED BY LAW, AGREES THAT ALL SUCH RISKS ASSOCIATED WITH THE APPLICATION AND USE ARE ASSUMED BY THE BUYER. Valent shall not be responsible for losses or damages (including, but not limited to, loss of yield, increased expenses of farming the crop or such incidental, consequential or special damages that may be claimed) resulting from use of this product in any manner not set forth on the label. Buyer assumes all risks associated with the use of this product in any manner or under conditions not specifically directed or approved on the label.
TANK MIXES

NOTICE: Tank mixing or use of this product with any other product which is not specifically and expressly authorized by the label shall be the exclusive risk of user, applicator and/or application advisor.

Read and follow the entire label of each product to be used in the tank mix with this product.

LIMITED WARRANTY

Valent warrants only that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the label, under average use conditions, when used strictly in accordance with the label and subject to the Risks of Using This Product as described above. To the extent consistent with applicable law and as set forth above, VALENT MAKES NO OTHER WARRANTIES, EITHER EXPRESSED OR IMPLIED. No agent or representative of Valent or Seller is authorized to make or create any other express or implied warranty.

LIMITATION OF LIABILITY

To the fullest extent allowed by law, Valent or Seller is not liable for any incidental, consequential, indirect or special damages resulting from the use or handling of this product. The limitation includes, but is not limited to, loss of yield on all or any portion of the treated acreage, increased care, treatment or other expenses required to take the crop to harvest, increased finance charges or altered finance ratings, emotional or mental distress and/or exemplary damages. TO THE FULLEST EXTENT ALLOWED BY LAW, THE EXCLUSIVE REMEDY OF THE BUYER, AND THE EXCLUSIVE MAXIMUM LIABILITY OF VALENT OR SELLER FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR OTHERWISE) RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT SHALL BE THE RETURN OF THE PURCHASE PRICE OF THIS PRODUCT OR, AT THE ELECTION OF VALENT OR SELLER, THE REPLACEMENT OF THE PRODUCT.

PROMPT NOTICE OF CLAIM

To the extent consistent with applicable law allowing such requirements Valent must be provided notice as soon as Buyer has reason to believe it may have a claim, but in no event later than twenty-one days from date of planting, or twenty-one days from the date of application, whichever is later, so that an immediate inspection of the affected property and growing crops can be made.

To the extent consistent with applicable law if Buyer does not notify Valent of any claims, in such period, it shall be barred from obtaining any remedy.

NO AMENDMENTS

Valent and Seller offer this product, and Buyer accepts it, subject to the foregoing Disclaimers, Risks of Using This Product, Limited Warranty and Limitation of Liability, which may not be modified by any oral or written agreement.
For control of listed sucking and chewing insects infesting cotton, cucurbits, fig, grape, leafy vegetables (including Brassica vegetables), peach, pome fruit, pomegranate, rice, soybean, tobacco, tree nuts and tuberous and corm vegetables (including potato and sweet potato).
