PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

WARNING

Causes substantial but temporary eye injury. Harmful if swallowed, inhaled or absorbed through the skin. Prolonged or frequently repeated skin contact may cause allergic skin reactions in some individuals. Do not get in eyes or on clothing. Avoid contact with skin. Avoid breathing dust or spray mist.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Some materials that are chemical-resistant to this product are listed below. If you want more options, follow the instructions for category A on an EPA Chemical Resistance Category Selection Chart.

Mixers, loaders, applicators and other handlers must wear:
- Long-sleeved shirt and long pants,
- Chemical-resistant gloves made of any waterproof material,
- Shoes plus socks,
- Use goggles or face shield.

Remove and wash contaminated clothing before reuse. Follow the manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

Engineering Controls Statement:

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR 195.40(d)(4)), the handler PPE requirements may be reduced or modified as specified in the WPS.

USER SAFETY RECOMMENDATIONS

Users should:
- Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet.
- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS

This pesticide is toxic to estuarine and marine invertebrates. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Drift and runoff may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment washwater or rinsewater.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply Repar Tebucon 45 DF Fungicide in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulations.

AGRICULTURAL USE REQUIREMENTS

Use Repar Tebucon 45 DF Fungicide only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 195. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific requirements for mixing, application, and storage of agricultural pesticides. These requirements are specified in the standard and are intended to protect the health and safety of agricultural workers.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours. PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:
- Long-sleeved shirt and long pants,
- Chemical-resistant gloves made of any waterproof material,
- Shoes plus socks,
- Protective eyewear.

GENERAL INFORMATION

Spray Volume: Apply Repar Tebucon 45 DF Fungicide in 50 gallons or more of spray solution per acre by ground spray equipment or in 15 gallons or more per acre by aircraft equipment except as noted under "REMARKS" for each crop. Increase spray volume to crop growth increases to ensure thorough coverage of foliage and fruit. Check equipment calibration frequently. Complete coverage and uniform application are essential for the most effective results, especially when lower spray volumes are applied.

Aerial application is not allowed in Long Island, New York.

Chemoirrigation: Do not apply Repar Tebucon 45 DF Fungicide through any type of irrigation system.

Mixing: Add recommended amount of Repar Tebucon 45 DF Fungicide into the spray tank while filling with water to the desired level. While mixing, maintain agitation. Repar Tebucon 45 DF Fungicide should be thoroughly dispersed in the spray tank prior to the addition of any other materials.

Compatibility: The following procedure should be followed when determining the compatibility of Repar Tebucon 45 DF Fungicide with other products: Pour the recommended proportions of the products into a suitable container of water. Mix thoroughly and allow to stand at least five (5) minutes. If the combination remains mixed or can be re-mixed readily, the mixture is considered physically compatible. For further information, contact your local Repar Corporation representative.

Rotational Crops: Any crop not specified on this label may be planted in treated areas 120 days after last application.

OBSERVE THE FOLLOWING PRECAUTIONS WHEN SPRAYING IN THE VICINITY OF AQUATIC AREAS SUCH AS LAKES, RESERVOIRS, RIVERS, PERMANENT STREAMS, MARSHES OR NATURAL PONDS, ESTUARIES AND COMMERCIAL FISH FARM PONDS.

Spray Drift Management: The interaction of many equipment and weather related factors determine the potential for spray drift. The applicator is responsible for considering all of these factors when making application decisions. Avoid areas where fish are known to be present.

Compatibility: The following procedure should be followed when determining the compatibility of Repar Tebucon 45 DF Fungicide with other products: Pour the recommended proportions of the products into a suitable container of water. Mix thoroughly and allow to stand at least five (5) minutes. If the combination remains mixed or can be re-mixed readily, the mixture is considered physically compatible. For further information, contact your local Repar Corporation representative.

Rotational Crops: Any crop not specified on this label may be planted in treated areas 120 days after last application.

Observe the following precautions when spraying in the vicinity of aquatic areas such as lakes, reservoirs, rivers, permanent streams, marshes or natural ponds, estuaries, and commercial fish farm ponds.

Spray drift management: The interaction of many equipment and weather related factors determine the potential for spray drift. The applicator is responsible for considering all of these factors when making application decisions. Avoiding spray drift is the responsibility of the applicator.

Buffer Zone Requirements: For soil or foliar applications, do not apply by ground within 25 feet, or by air within 150 feet of lakes, reservoirs, rivers, permanent streams, marshes or natural ponds, estuaries, and commercial fish farm ponds.

Recommendations For Aerial Applications: The spray boom should be mounted on the aircraft so as to minimize drift caused by wing tip vortices. The minimum practical boom length should be used and must not exceed 75% of the wing span or rotor diameter.

Importance of Droplet Sizes: An important factor influencing drift is droplet size. Small droplets (<100 - 200 microns) drift to a greater extent than large droplets. Within typical equipment specifications, applications should be made to deliver the largest droplet spectrum that provides sufficient control and coverage. Formation of very small droplets may be minimized by appropriate nozzle selection by orienting nozzles away from the air stream as much as possible and avoiding excessive spray boom pressure.

Spray should be released at the lowest possible height consistent with good pest control and flight safety. Applications more than 10 feet above the crop canopy should be avoided.

Wind Speed Restrictions: Drift potential increases at wind speeds of less than 3 mph (due to inversion potential) or more than 10 mph. However, many factors, including droplet size, canopy and equipment specifications determine drift potential at any given wind speed. Do not apply when winds are greater than 15 mph and avoid gusty and windless conditions. Avoiding applications when wind direction is toward the aquatic area can reduce risk of exposure to sensitive aquatic areas.

Restrictions During Temperature Inversions: Do not make aerial or ground applications during temperature inversions. Drift potential is high during temperature inversions. Temperature inversions restrict vertical air mixing, which causes small suspended droplets to remain close to the ground and move laterally in a concentrated cloud. Temperature inversions are characterized by increasing temperature with altitude and are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present the movement of smoke from a ground source can also identify inversions. Smoke that stays near the ground in a concentrated cloud under low wind conditions indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical mixing.

Aerial (Air Assisted) Specific Recommendations for Tree Crops and Vineyards: Airblast sprayers carry droplets into the canopy of trees/vines via a radially or laterally directed air stream. The following specific drift management practices should be followed:

- Adjust deflectors and aiming devices so that spray is only directed into the canopy;
- Block off upward pointed nozzles when there is no overhanging canopy;
- Use only enough air volume to penetrate the canopy and provide good coverage;
- Do not allow the spray to go beyond the edge of the cultivated area (i.e. turn off sprayer when turning at end rows);
- Only spray inward, toward the orchard or vineyard, for applications outside rows.

Runoff Management: Do not cultivate within 10 feet of the aquatic area to allow growth of a vegetative filter strip. When used on erodible soils, best management practices for minimizing runoff should be employed. Consult your local Soil Conservation Service for recommendations in your use area.

### CROP-SPECIFIC USE DIRECTIONS

</thead>
<tbody>
<tr>
<td>Cherry, Peach, Nectarine</td>
<td>General Information</td>
<td></td>
<td>Do not apply more than 3 pounds (4 lbs) of product per acre per</td>
</tr>
<tr>
<td></td>
<td></td>
<td>2 oz/100 gal*</td>
<td>4 to 8 oz/acre**</td>
</tr>
<tr>
<td>Cherry, Peach, Nectarine</td>
<td>Brown Rot (Blossom Blight, Fruit Rot)</td>
<td>2 oz/100 gal*</td>
<td>Blueeem Blight: Begin application at white bud on cherry or pinic bud on peach and nectarine. Apply again at 50% bloom and at petal fall if conditions continue to be favorable for disease development. Fruit Rot: Begin application at two to three weeks before harvest and continue at 7-day intervals through the day of harvest. The blossom and fruit stages must be protected for optimum control of brown rot. If Repar Tebucon 45 DF Fungicide is applied during only one of these stages, apply another registered fungicide during the other stage to provide optimum protection. Additional cover sprays during the early post bloom period are also important for preventing quiescent fruit infections in sweet cherry and peach.</td>
</tr>
</tbody>
</table>

* When using the 2 oz/100 gal rate, use at least 4 oz of Repar Tebucon 45 DF Fungicide per acre.

** The amount of Repar Tebucon 45 DF Fungicide required per acre will depend on tree size and volume of foliage present. The rate per acre is based on a standard of 400 gallons of dilute spray solution per acre for large trees. For smaller trees, multiply 3 oz times the number of 100 gallons of spray solution required to thoroughly wet the point of runoff one acre of trees being treated. For concentrate sprays, apply the same amount of product per acre as would be applied in a dilute spray based on tree size and foliage volume, but not less than 4 ounces of Repar Tebucon 45 DF Fungicide per acre. Apply 6 to 8 ounces per acre of Repar Tebucon 45 DF Fungicide when severe disease conditions exist.

<tbody>
<tr>
<td>Black Leaf Streak; Yellow Sigatoka</td>
<td>3.2 oz per acre</td>
<td>Apply specified dosage as a foliar spray in a minimum of 30 gallons or more of water per acre to assure thorough coverage of the plants. Utilize a spray oil recommended for use on banana or plantain at 4.3 pints per acre in a tank-mix with Repair Tebucon 45 DF Fungicide. Thoroughly mix the Repair Tebucon 45 DF Fungicide in the spray solution prior to the addition of a spray oil. Make the first application before disease becomes established and repeat applications at 14-day intervals if necessary to maintain disease control. Do not apply Repair Tebucon 45 DF Fungicide to non-bagged bananas.  Apply a maximum of 1 pound (16 ounces) of Repair Tebucon 45 DF Fungicide per acre per harvest cycle.</td>
<td></td>
</tr>
</tbody>
</table>

**STORAGE AND DISPOSAL**

Do not contaminate water, food, or feed by storage or disposal.

Pesticide Storage: Store in a cool, dry, secure place and in such a manner as to prevent cross contamination with other pesticides, fertilizers, food, and feed. Store in original container and out of the reach of children, preferably in a locked storage area. Handle and open container in a manner as to prevent spillage. If container is leaking or material is spilled for any reason or cause, carefully sweep material into a pile. Refer to Precautionary Statements on label for hazards associated with the handling of this material. Do not walk through spilled material. Dispose of pesticide as directed below. In spill or leak incidents, keep unauthorized people away.

Pesticide Disposal: Wastes resulting from the use of Repair Tebucon 45 DF Fungicide may be disposed of on site or at an approved disposal facility.

Container Disposal: Completely empty container into application equipment. Then dispose of empty container in a sanitary landfill, or by incineration or, if allowed by state authorities, by burning. If burned, stay out of smoke.

**TEBUCON 45 DF**

**FUNGICIDE**

**ACTIVE INGREDIENT:**

Tebuconazole, alpha-C[(1-chlorophenyl)ethoxy]-alpha-
(1,1-dimethylethyl)-1H-1,2,4-triazole-1-ethyl

**OTHER INGREDIENTS**

**TOTAL**

100%

**Mosquito bites:**

if in the eyes:
- Wash eyes open and rinse slowly and gently with water for 15-20 minutes.
- Remove contact lenses, if present, after first 5 minutes, then continue rinsing eye.
- Call a poison control center or doctor for treatment advice.

if swallowed:
- Call a poison control center or doctor immediately for treatment advice.
- Have person drink several glasses of water if able to swallow.
- Do not induce vomiting unless told to do so by a poison control center or doctor.
- Do not give anything by mouth to an unconscious person.

if on skin or clothing:
- Take off contaminated clothing.
- Wash skin immediately with plenty of water for 15-20 minutes.
- Call a poison control center or doctor for treatment advice.

**FIRST AID**

**If inhaled:**
- Move person to fresh air.
- If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth, if possible.
- Call a poison control center or doctor for treatment advice.

**For immediate assistance:**

If you have questions about this product, call the National Pesticide Information Center at 1-800-858-7378.

**EPA Reg. No. 65651-18**

**See label booklet for additional precautionary statements and directions for use.**
