BACKED by BAYER
FIRST AID

If on skin:
- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15 to 20 minutes.
- Call a poison control center or doctor for treatment advice.

If in eyes:
- Hold eye open and rinse slowly and gently with water for 15 to 20 minutes.
- Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
- Call a poison control center or doctor for treatment advice.

If swallowed:
- Call a poison control center or doctor immediately for treatment advice.
- Have person sip a glass of water if able to swallow.
- Do not induce vomiting unless told to do so by a poison control center or doctor.
- Do not give anything to an unconscious person.

Have the product container or label with you when calling a poison control center or doctor or going for treatment. The Bayer Environmental Science Emergency Response Telephone No. is 1-800-334-7577.

Note To Physician: No specific antidote is available. Treat the patient symptomatically.

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION

Harmful if absorbed through skin. Harmful if swallowed. Causes moderate eye irritation. Avoid contact with skin, eyes or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum or using tobacco. Wear long-sleeved shirt and long pants, socks, shoes, and gloves. Remove contaminated clothing and wash before reuse.

ENVIRONMENTAL HAZARDS

This pesticide is extremely toxic to wildlife, fish and aquatic invertebrates. Do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean high water mark. Drift and run-off from treated areas may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment wash waters. Care should be used when spraying to avoid fish and reptile pets in/around ornamental ponds. This product is highly toxic to bees exposed to direct treatment or residues on blooming crops or weeds. Do not apply this product or allow it to drift to blooming crops if bees are visiting the treatment area.

PRO FACTS

- Two modes of action
- Contact activity & systemic action
- Quick knockdown & residual control
- Low odor
- Non-staining
- No phytotoxicity on a wide range of ornamentals

Tempri$$ SC Insecticide

- Tempri$$ SC Insecticide is a suspension concentrate formulation of two insecticide active ingredients, imidacloprid and β-cyfluthrin. One gallon of this product contains 2 lbs of imidacloprid and 1 lb of β-cyfluthrin.
- Shake well before using.

PRO FACTS (Cont)

Controls
- Indoor or General Household Pests
- Outdoor/Perimeter Pests
- Wood-Infesting Pests
For list of specific insects, see inside.

Where To Apply
- Apply where pests have been seen or found, or can find shelter.
- In and around buildings and structures
- On established landscape ornamentals around residential and commercial properties

Dilution Rates
- When 0.27 fl oz (8 milliliters) is diluted in one gal of water, the combined active ingredient concentration (0.07%) contains 0.05% imidacloprid and 0.025% β-cyfluthrin.
- When 0.54 fl oz (16 milliliters) is diluted in one gal of water, the combined active ingredient concentration (0.15%) contains 0.10% imidacloprid and 0.05% β-cyfluthrin.

Mixing Information
- Mix the appropriate amount of Tempri$$ SC insecticide with water.
- Acid product when filling spray tank with water; shake or agitate mixture.
- Diluted spray mixture can be stored overnight. Agitate before using.

How To Apply
- General surface (outdoors only), spot treatment, and void applications by mist, foam or crack & crevice sprays.
- Foliar application to established landscape ornamentals.

Re-Apply
- Every 7 to 10 days, if needed.

Re-Entry
- Do not contact treated surfaces until dry.
- People and pets may re-enter after the treated area is dry.

Questions
For questions or comments, call toll-free 1-800-331-2967

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not formulate this product into other end-use products.

INDOOR PESTS

FOR RESIDUAL PEST CONTROL IN BUILDINGS, STRUCTURES, AND MODES OF TRANSPORT
Use Tempri$$ SC Insecticide as a spot spray or crack and crevice treatments inside buildings and structures. This includes schools, factories, stores, warehouses, hospitals, food processing facilities (non-food/feed areas), and modes of transport. For a list of common facilities where this product may be used, see Appendix.

Where To Apply:
- Treat where pests have been seen or found, or can find shelter.
- Use only as a spot spray or crack and crevice or void treatments inside buildings and structures.
- Treat entry points such as around water pipes, doors, windows, and eaves.
- Treat areas where pests normally feed or hide such as baseboards, corners, around water pipes, behind or under refrigerators, cabinets, sinks, and stoves.
- Mist or foam applications can be made behind veneers, piers, and chimney bases, into rubble foundations, into block voids or structural voids, wall voids, under slabs, stoops, porches, or to the soil in crawlspace, and other similar voids.
- Spot treat floor or rags beneath furniture, in closets, and storage areas, but do not apply to entire floor area.

Use Rate:
- 0.075% -- 0.27 fl oz (8 milliliters) per gallon of water
- 0.15% -- 0.54 fl oz (16 milliliters) per gallon of water
- Use high rate for severe infestations, faster knockdown, and longer residual.

How To Apply (Cont.)
- Remove or tightly cover fish tanks and disconnect aerators during application.
- Keep people and pets away from sites of application until treated surfaces are completely dry.
- Do not contact treated surfaces until dry.
- When treating overhead areas, wear safety glasses, goggles, or face shield and a dust/mist respirator.

#### APPLICATION FOR INDOOR PESTS

**Crawling Insects**
- Cockroaches
- Crickets
- Silverfish
- Spiders
- and other listed pests

Use a coarse, low-pressure spray (do not exceed 50 psi at nozzle tip).

Treat entry points such as around water pipes, doors, windows, and eaves. Treat areas where pests normally feed or hide such as baseboards, corners, around water pipes, under refrigerators, cabinets, sinks, and stoves, being sure to spray cracks & crevices. Spot treat floor or rags beneath furniture, in closets, and storage areas, but do not apply to entire floor area.

For more difficult to control pests, like certain spiders, direct contact spray is required for effective control.

**Bed bugs**

Use Rate: 0.075% - 0.27 fl oz (8 milliliters) of Temprid SC per gal of water.

Controls bed bug populations that are resistant to pyrethroid insecticides. Spray bugs and eggs directly wherever possible following site directions below.

For infested mattresses, remove linens and wash before reuse. Apply to tufts, seams, folds, and edges until moist. Allow to dry before remaking bed.

Apply to bedsprings, box springs, and the interior of bed frames or headboards, including all cracks and joints.

When bed bugs are found in upholstered furniture, apply only to the infested tufts, seams, folds, edges, after not applying to flat surfaces where prolonged human contact will occur. If bugs heavily infest furniture (inside cushions and/or batting) apply a labeled insecticide dust or consider fumigation.

Apply a crack and crevice treatment to all baseboards, moldings, beneath floor coverings and carpets, closets, shelves, curtains, furniture and picture frames that may provide harborage to bed bugs.

Re-apply every 7 to 10 days, as needed, until infestation is eliminated.
APPLICATION FOR INDOOR PESTS (Cont)

**Ants**
Apply to ant trails on walls, tile, basboards, around pipes, under cabinets, and other places where ants are active.
Treat entry points such as windows, doors or sites where utilities enter the structure; also see directions for use in Outdoor/Perimeter Pests section.
Treat nests when possible.

**Listed Flying Insects**
Apply to surfaces where pests collect or rest.

OUTDOOR/PERIMETER PESTS

</table>

**Where To Apply**
- Apply to surfaces on buildings, porches, patios and other structures, around doors and windows, eaves and attic vents, utility entry points, soffit areas and other exterior openings (including foundation cracks or drilled holes) where these pests enter the structure or where they have been seen or found, or can be found.
- To prevent infestation, treat the outside of the structure, to include walls (to a height of 2 to 3 feet) around doors, windows, and soffits where pests are active or may enter or hide. Treat the soil, turf or other ground covering adjacent to the structure (in a band up to 10 feet wide) where pests are seen, have been found, or can be found.
- In ant management programs, apply to flower, shrub or ornamental plant beds where ants may find food or forage.

**Use Rate**
- 0.075% -- 0.27 fl oz (8 milliliters) per gal of water
- 0.15% -- 0.54 fl oz (16 milliliters) per gal of water
- Always use the 0.15% rate for fire ants, hornets, wasps and yellow jackets.

**How To Apply (also see Applications For Outdoor/Perimeter Pests)**
- Apply enough dilution to adequately cover the area without excessive dripping or run-off. Volume can vary depending on the surface type treated. For example, mulch requires more spray than bare soil.
- For high volume applications, Temprid SC Insecticide may be diluted at lower concentrations and applied in greater volumes of water.
- When treating overhead areas, wear safety glasses, goggles, or face shield and a dust/mist respirator.
- Do not contact treated surfaces until dry.

APPLICATION FOR OUTDOOR/PERIMETER PESTS

**When To Apply**
- When pests are seen or found
- Re-apply every 7 to 10 days if needed.

**Ants**
Locate and treat ant nests, if possible. Follow trails of foraging workers, check under objects near the structure, and inspect other likely nest sites. If ants are nesting in the soil, thoroughly drench or inject the nest and surrounding soil. Treat ant trails around windows and doors, along sidewalks, or other areas where seen. Apply perimeter treatment as described above.
Temprid SC Insecticide contains a systemic insecticide (imidacloprid), so foliar application to landscape ornamentals provides locally systemic control of aphids, scale insects, and other plant-sucking insects and limit the production of honeydew (an important food source for ant populations).
Apply a very light mist of the dilute spray, and do not allow excess run-off. Treat thoroughly for good coverage including the underside of leaves. As these pests often feed or nest there.
Aerial Nests: If ant nests are located in trees, hollows or non-structural wooden construction (e.g., posts, fences, decks) treat the interior cavity and/or the nest site by injecting a spray, mist, or sufficient volume of foam.
It is recommended to remove or prune away any shrubbery, bushes, and tree branches touching the structure. Vegetation touching the structure may offer a route of entry for ants into the structure. This may allow ants to inhabit the structure without coming in contact with the treatment.

**Hornets, wasps, and yellow jackets**
Use Rate: 0.15% -- 0.54 fl oz (16 milliliters) of Temprid SC Insecticide per gal of water.
Make pin stream applications directly to the nests. To help avoid stings treat nests in the evening when the insects are inside the nest. Remove and destroy treated nests to prevent emergence of newly hatched insects. If removal is not possible, retreat nests if necessary.

**Occasional invaders**
Boxelder bugs, elm leaf beetles, and other listed pests
Apply directly to insects that have congregated around doors and windows and similar areas where they may enter structures. Apply perimeter treatment as described above.
For best results, treat infested trees and shrubs early in the season. Tree spraying may require ornamental license -- check with your local regulator.

**Centipedes, millipedes, pill bugs, sow bugs, springtails, etc.**
Apply perimeter treatment to reduce the number of insects from entering the structure. Thoroughly treat mulched areas. Correcting moisture problems around the structure will reduce pest pressure.

(continued)
**APPLICATION FOR OUTDOOR/PERIMETER PESTS (Cont)**

<table>
<thead>
<tr>
<th>Fire Ants</th>
<th>Use Rate: 0.15% - 0.54 fl oz (16 milliliters) of Temprid SC Insecticide per gal of water. Thoroughly drench or inject the entire mound. When using injection treatment, you must treat the bottom of the mound. Apply dilution or foam using a downward and upward motion of the injector tool. For complete distribution, inject in several points throughout the mound. Treat new mounds as they appear. Do not use in pastures or areas of food crop production.</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>Fleas &amp; ticks (Including ticks that may transmit Lyme Disease and Rocky Mountain Spotted fever)</th>
<th>For ticks, treat likely harborage areas like along paths, tall grass and other vegetation. For fleas, concentrate treatments in areas where pets are known to rest, as these areas are larval breeding hot spots. Treat the entire area where these pests could be present. Fleas and ticks may be reintroduced from surrounding areas by host animals.</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>House flies and Cluster flies</th>
<th>Apply low-volume mist or spray to outside surfaces of buildings, porches, patios, garages, fences, and other areas where house flies rest. Cluster flies: Treat in late summer or fall, just before cluster flies begin looking for winter shelter. Spray siding, eaves, around windows and doors, window screens, and attics. To help reduce infestations, treat cracks and crevices, attics and other indoor winter hiding places.</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>Mosquitoes</th>
<th>Treat with spray or mist around landscape plants, turf and ground cover, under decks, around building foundations and other places where mosquitoes may rest.</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>Scorpions</th>
<th>Treat around piles of firewood and other areas where scorpions may hide. When possible, remove piles of materials that can harbor the pests. Apply a perimeter treatment. Do not treat firewood with this product.</th>
</tr>
</thead>
</table>

---

**WOOD-INFESTING PESTS**

**When To Apply**
- When pests are seen or found.
- Re-apply every 7 to 10 days if needed.

**Foam Applications**
- Mix end-use dilution with manufacturer's specified volume of foaming agent.

---

**WOOD-INFESTING PESTS (Cont)**

**Drywood termites & wood-infesting beetles**

| Galleries and structure voids: Treat by applying sprays, mists, or foams. Locate galleries by using visual signs (frass or pellets, blistered wood, emergence or clean out holes), the presence of live insects, mechanical sounding techniques, or listening devices (e.g., stethoscopes, acoustic emission detectors). Penetrate the gallery system by drilling holes to receive the injector tip or treatment tool. Distribute drill holes to adequately cover the gallery system. Apply as a low pressure spray (do not exceed 50 psi at nozzle tip) or by misting or, where appropriate, by foaming. It is not necessary to treat the point where runoff is detected from adjacent holes. Avoid drilling where electrical wiring, plumbing lines, etc. are located. Do not apply where electrical shock hazards exist. Drill holes in commonly occupied areas must be sealed after treatment. Wood surfaces: Treat by spray or mist or, where appropriate, foam applications. For inaccessible surfaces, drill and treat the interior of structural voids. Surfaces treated may include exposed wooden surfaces in crawl spaces, basements, or attics, wooden exterior surfaces such as decks, fencing, or siding, structural voids, channels in damaged wood. Spaces between wooden members of a structure, and junctions between wood and foundations. Apply by brushing or as a coarse, low pressure spray (do not exceed 50 psi at nozzle tip) to the wood surface; apply sufficient volume to cover the surface to the point of wetness, but avoid applying to the point of runoff. When spraying wood surfaces overhead in living areas, cover surfaces below the treated area with plastic sheeting or similar material. Do not contact treated surfaces until spray deposits have dried. |
| --- | --- |

**Carpenter ants**

Homes and other structures: Apply around doors and windows and other places where carpenter ants may enter. Spray or foam into cracks & crevices, or spray, mist or foam through small drilled holes into voids where ants or nests are present. Use enough spray or foam to cover the area. Inside trees, utility poles, fencing and deck materials and similar structural members, drill to find the interior infested cavity and inject spray, mist or foam using a treatment tool with a splashback guard. Tunnelling in soil: Apply as a soil drench or inject the dilution or foam in the soil at intervals of 8 to 12 inches. Use 1 gal of dilution per 8 sq ft. Treat along the edge of walls, driveways or other hard surfaces where ants are tunnelling beneath the surface. |
### APPLICATION FOR WOOD-INFESTING PESTS (Cont)

- Protecting firewood from carpenter ants: Treat soil beneath firewood before stacking at 1 gal of dilution per 8 sq ft. 
- Do not treat firewood with this product.
- It is recommended to remove or prune away any shrubbery, bushes, and tree branches touching the structure. Vegetation touching the structure may offer a route of entry for ants into the structure. This may allow ants to inhabit the structure without coming in contact with the treatment.

### Carpenter bees

- In or on structures: Apply as a spray or mist, or sufficient volume of foam, directly into gallery entrance holes. Leave entrance open to be sure that returning adult bees are killed. When there is no longer any insect activity, the entrance hole may be sealed with a suitable sealant.
- Exterior wood surfaces may be treated by general surface application to prevent nest cavity excavation by adult carpenter bees.

### STORAGE AND DISPOSAL

- Do not contaminate water, food or feed by storage or disposal.
- **PESTICIDE STORAGE**: Mix as needed. Store in original container in a secured dry storage area. Avoid extremes in temperatures. Prevent cross-contamination with other pesticides and fertilizers. If the container is leaking and/or material is spilled, on floor or paved surfaces, absorb on sawdust or other commercially available absorbing material, sweep up and remove to chemical waste area for your disposal. Concentrate is stable at normal storage temperatures.
- **PESTICIDE DISPOSAL**: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.
- **CONTAINER DISPOSAL**: Non-refillable container. Do not reuse or refill this container. Offer for recycling, if available. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat these procedure two more times. If recycling is not available, puncture and dispose of in a sanitary landfill or by incineration, or if allowed by state and local authorities, by burning. If burned stay out of smoke. If partially filled: Call your local solid waste agency for disposal instructions. Never place unused product down any indoor or outdoor drain.

### APPENDIX

Use Temprid SC Insecticide as a general surface (outdoors only), spot, mist, or crack and crevice treatment. Permitted areas of use include the following buildings, structures, and modes of transport:

- apartment buildings
- barns
- bottling facilities
- breweries
- buses
- cafeterias
- candy plants
- cereal processing and manufacturing plants
- correctional facilities,
- dairy and dairy products
- processing plants
- frozen foods plants
- grain mills
- granaries
- greenhouses (structures only)
- hospitals
- hotels
- houses
- industrial buildings
- kitchens
- laboratories
- livestock housing
- pet kennels
- manufacturing establishments
- mausoleums
- meat and produce canneries
- nursing homes
- piggery factories
- poultry houses
- processing and packing plants
- restaurants
- schools
- spice plants
- stores
- warehouses
- wineries and similar structures
- transportation vessels such as buses, trucks, trailers, rail cars, and marine vessels

### IMPORTANT: READ BEFORE USE

Read the entire Directions for Use, Conditions, Disclaimer of Warranties and Limitations of Liability before using this product. If terms are not acceptable, return the unopened product container at once.

By using this product, user or buyer accepts the following Conditions, Disclaimer of Warranties and Limitations of Liability.

**CONDITIONS**: The directions for use of this product are believed to be adequate and must be followed carefully. However, it is impossible to eliminate all risks associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or the manner of use or application, all of which are beyond the control of Bayer CropScience LP. All such risks shall be assumed by the user or buyer.
