RESTRICTED USE PESTICIDE
Due to acute oral, dermal, and inhalation toxicity and also avian hazards.
For retail sale to and use only by Certified Applicators or persons under their direct supervision and only for uses covered by the Certified Applicator's certification.

FIFRA SECTION 24(c) SPECIAL LOCAL NEED LABEL
FOR DISTRIBUTION AND USE ONLY WITHIN CURRY COUNTY IN THE STATE OF OREGON

Thimet® 20-G
Lock'N Load®
SOIL & SYSTEMIC INSECTICIDE LOCK'N LOAD® CLOSED HANDLING SYSTEM

EPA Reg. No. 5481-530     EPA SLN No. OR-090015

For Control of Nematodes in Field-Grown Easter Lily Bulbs

THIS LABEL IS VALID UNTIL DECEMBER 31, 2024 OR UNTIL OTHERWISE AMENDED, WITHDRAWN, CANCELED, OR SUSPENDED.

The Easter Lily Research Foundation intends that this FIFRA Section 24(c) Special Local Need (SLN) label be distributed only by the Easter Lily Research Foundation and member(s) in Oregon, and only to end users and/or growers who agree in writing to the terms and conditions required by the Easter Lily Research Foundation.

ACTIVE INGREDIENT:
Phorate: O,O-diethyl S-[(ethylthio)methyl] phosphorodithioate ........................................... 20%

OTHER INGREDIENTS ........................................................................................................... 80%

TOTAL .................................................................................................................................... 100%

KEEP OUT OF REACH OF CHILDREN

DANGER / POISON / PELIGRO

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle.
(If you do not understand the label, find someone to explain it to you in detail.)

Phorate can cause cholinesterase inhibition in humans; that is, it can overstimulate the nervous system causing nausea, dizziness, confusion, and at very high exposures (e.g., accidents or major spills), respiratory paralysis and death.

Environmental Hazards

This pesticide is very highly toxic to fish and wildlife. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high-water mark. Runoff may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment wastewater or rinsate. Birds and mammals may be killed if granules are not properly covered with soil in all areas of the treated field and in loading areas.
DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

This Special Local Need (SLN) label and the Section 3 federal label for Thimet 20-G Lock’N Load, EPA Reg. No. 5481-530, must be in the possession of the user at the time of pesticide application. Read this SLN label and the entire product label for EPA Reg. No. 5481-530. All applicable directions, restrictions, Worker Protection Standard (WPS) requirements, and other precautions on the main EPA-registered product label and on this SLN label must be followed.

Target Pest and Crop: For control of root lesion nematodes in field-grown Easter lily bulbs.

Application Rate: Apply 40 lb. Thimet 20-G Lock’N Load (8.0 lb. active ingredient) per acre.

Method/Timing of Application: Make one application at planting time only. Apply only by ground application. Apply granules evenly in furrow over the set bulbs and cover completely with soil. Final hilling of bulbs as soon as practical will enhance control. Precise placement of material over bulbs before covering with soil will enhance control.

Field Reentry Interval: Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 48 hours.

Restrictions and Precautions:

- This product is extremely toxic to birds. Cover or incorporate granules which are visible on soil surface. Do not allow Thimet 20-G Lock’N Load granules to be exposed on soil surface.
- Do not apply this product by air.
- Do not apply this product to saturated soils. Do not apply in wet soil conditions that may prevent the equipment from covering pesticide granules. Do not apply while precipitation conducive to runoff is occurring or while conditions favor runoff from the treated area. Do not apply when forecasted precipitation event favors runoff from treated area.
- Under some conditions, phorate may have a high potential for runoff into surface water for several days post application. Do not apply in the following situations:
  - Frequently flooded areas
  - Areas where intense or sustained rainfall is forecasted to occur within 48 hours
- Use Best Management Practices (BMPs) for minimizing surface runoff in the following areas:
  - Poorly draining or wet soils with readily visible slopes toward adjacent surface water
  - Areas over-lying extremely shallow ground water
  - Areas with in-field canals or ditches that drain to surface water
  - Areas not separated from adjacent surface waters with vegetated filter strips
  - Areas over-lying tile drainage systems that drain to surface water
- When used on erodible soils, BMPs for minimizing runoff should be followed. Consult your local soil conservation service for recommendations in your use area.
- In particular, where highly erodible land (HEL) is adjacent to aquatic bodies, leave a 66-foot buffer/setback area in grass or other natural vegetation.
- Do not apply within 50 feet of any drinking water well to minimize potential contamination.
- Do not wash, load, or empty application equipment near any well, as this practice is a potential source of ground water contamination.
