**FOR ORGANIC PRODUCTION**

Active Ingredient: *Paecilomyces lilacinus* strain 251* ...................................................6.0%

Other Ingredients: ..........................................................................................................94.0%

Total: .........................................................................................................................100.0%

*Contains a minimum of 1 X 10¹⁰ viable spores/gram

**KEEPS OUT OF REACH OF CHILDREN**

**CAUTION**

**First Aid**

If Swallowed:
- Call a poison control center or doctor immediately for treatment advice.
- Have person sip a glass of water if able to swallow.
- Do not induce vomiting unless told to do so by a poison control center or doctor.
- Do not give anything by mouth to an unconscious person.

If On Skin Or Clothing:
- Take off contaminated clothing.
- Rinse skin immediately with plenty of water for 15-20 minutes.
- Call a poison control center or doctor for treatment advice.

If Inhaled:
- Move person to fresh air.
- If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible.
- Call a poison control center or doctor for further treatment advice.

**Hot Line Number**

Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

For emergency information, call a local poison control center at 1-800-222-1222.

**DIRECTIONS FOR USE**

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and for pesticide regulation.

Read the entire label before using.

**AGRICULTURAL USE REQUIREMENTS**

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval. The requirements in this box only apply to uses of this product that are not within the scope of the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries or greenhouses.

**ENVIRONMENTAL HAZARDS:**

For terrestrial uses: Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment wash waters or rinsate.

**USER SAFETY RECOMMENDATIONS**

**Non-agricultural use requirements**

The requirements in this box apply to uses of this product that are not within the scope of the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries or greenhouses.

Keep unprotected persons out of treated areas until sprays have dried.

**Non-agricultural use requirements**

The requirements in this box apply to uses of this product that are not within the scope of the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries or greenhouses.

Keep unprotected persons out of treated areas until sprays have dried.
PRODUCT INFORMATION:
MeloCon® WG is a water dispersible granule formulation containing spores of a soil fungus that parasitizes many species of plant-parasitic nematodes. MeloCon® WG is intended for use as part of an Integrated Pest Management (IPM) system. When used as part of a complete pest management program, MeloCon® WG reduces crop damage by plant-parasitic nematodes.

FOR CONTROL OF CROP DAMAGE CAUSED BY THE FOLLOWING PESTS:
- Awl nematodes (Dolichodorus species)
- Bursrowing nematodes (Tylenchulus semipenetrans)
- Citrus nematode (Tylenchulus semipenetrans)
- Cyst nematodes (Heterodera and Globodera species)
- False root-knot nematodes (Nacobbus species)
- Lance nematodes (Hoplolaimus species)
- Lesion nematodes (Pratylenchus species)
- Reniform nematode (Rotylenchulus reniformis)
- Ring nematodes (Criconemoides, Criconemella and Mesocriconema species)
- Root-knot nematodes (Meloidogyne species)
- Spiral nematodes (Helicotylenchus and Rotylenchus species)
- Stem nematode (Ditylenchus dipsaci)
- Sting nematode (Belonolaimus longicaudatus)
- Stubby root nematodes (Trichodorus and Paratrichodorus species)
- Stunt nematodes (Tylenchorhynchus species)

MIXING DIRECTIONS:
- Determine the total volume of water needed for application according to the application tables below.

<table>
<thead>
<tr>
<th>Crop group, crop or use site</th>
<th>Application type/timing</th>
<th>Application rates and instructions</th>
</tr>
</thead>
</table>
| Fruiting vegetables, including Tomato, Tomatillo, Peppers (all types) and Eggplant | Application to field soils before planting or transplanting | Apply 2 to 4 pounds of MeloCon® WG per acre. Applications can be made by the following methods:  
  - Drenching, drip (trickle) or sprinkler application (see “Instructions for MeloCon® WG Application through Irrigation Systems”). To enhance penetration of spores into the root zone, consider mixing MeloCon® WG with a soil wetting agent.  
  - Surface spray on moist soil with 40-100 gallons water per acre followed by incorporation using light tillage.  
  - Surface spray with 20-40 gallons water per acre followed by overhead irrigation. Use enough irrigation water to wet the soil into the root zone.  
  - Direct injection to anticipated root depth using shank or other soil injection equipment. Apply with 30-40 gallons water per acre. |
| Leafy Vegetables, including Arugula, Head and Leaf Lettuce, Spinach (all types), Celery (all types), Corn salad (Mâche), Cress (all types), Endive, Radicchio and RHubarb | Application to transplants just before transplanting into the field | Mix 0.5 pound (1 3/4 cup) of MeloCon® WG with 5 gallons of water, and apply as a drench spray to 100 cubic feet of soil or other growth media in transplant flats, pots or other rooting containers. Follow the application with sufficient additional water (such as by drenching or overhead irrigation) to saturate the soil or rooting medium. As needed, follow up with applications at 4- to 6-week intervals at or after transplanting, as described in the section that follows. |
| Brassica (cote) leafy vegetables, including Broccoli (all types), Brussels Sprouts, Cabbage (all types), Cauliflower, Collards, Kale and Mustard Greens (all types) | Application to field soils at or after planting or transplanting | Apply 2 to 4 pounds of MeloCon® WG per acre by one of the following methods:  
  - Drip (trickle) application (see “Instructions for MeloCon® WG Application through Irrigation Systems”).  
  - Banded spray 4" to 6" wide, in-furrow at planting (over or under the seed line).  
  - Surface spray on moist soil with 40-100 gallons water per acre followed by incorporation using light tillage.  
  - Surface spray with 20-40 gallons water per acre followed by overhead irrigation. Use enough irrigation water to wet the soil into the root zone.  
  - Direct injection to anticipated root depth using shank or other soil injection equipment. Apply with 30-40 gallons water per acre. Pre-plant applications may be either broadcast over an entire field or concentrated (banded) into planting rows. If the soil has been fumigated recently (within 2 weeks), make the initial MeloCon® WG application to transplants just before transplanting into the field, as described in the section that follows. Alternatively, apply MeloCon® WG to fumigated soil at or after planting or transplanting (see third section below). |
| Cucurbit vegetables, including Watermelon, Cantaloupe, Muskmelon (including Honeydew Melon and other melons), Cucumbers (including pickling), Edible Gourds, Pumpkins and Squash (all types) | Application to field soils before planting or transplanting | Apply 2 to 4 pounds of MeloCon® WG per acre by one of the following methods:  
  - Drenching, drip (trickle) or sprinkler application (see “Instructions for MeloCon® WG Application through Irrigation Systems”).  
  - Banded spray 4" to 6" wide, in-furrow at planting (over or under the seed line).  
  - Surface spray on moist soil with 40-100 gallons water per acre followed by incorporation using light tillage.  
  - Surface spray with 20-40 gallons water per acre followed by overhead irrigation. Use enough irrigation water to wet the soil into the root zone.  
  - Direct injection to anticipated root depth using shank or other soil injection equipment. Apply with 30-40 gallons water per acre. Pre-plant applications may be either broadcast over an entire field or concentrated (banded) into planting rows. If the soil has been fumigated recently (within 2 weeks), make the initial MeloCon® WG application to transplants just before transplanting into the field, as described in the section that follows. Alternatively, apply MeloCon® WG to fumigated soil at or after planting or transplanting (see third section below). |
| Leafy Vegetables, including Broccoli (all types), Brussels Sprouts, Cabbage (all types), Cauliflower, Collards, Kale and Mustard Greens (all types) | Application to field soils at or after planting or transplanting | Apply 2 to 4 pounds of MeloCon® WG per acre by one of the following methods:  
  - Drenching, drip (trickle) or sprinkler application (see “Instructions for MeloCon® WG Application through Irrigation Systems”).  
  - Banded spray 4" to 6" wide, in-furrow at planting (over or under the seed line).  
  - Surface spray on moist soil with 40-100 gallons water per acre followed by incorporation using light tillage.  
  - Surface spray with 20-40 gallons water per acre followed by overhead irrigation. Use enough irrigation water to wet the soil into the root zone.  
  - Direct injection to anticipated root depth using shank or other soil injection equipment. Apply with 30-40 gallons water per acre. Pre-plant applications may be either broadcast over an entire field or concentrated (banded) into planting rows. If the soil has been fumigated recently (within 2 weeks), make the initial MeloCon® WG application to transplants just before transplanting into the field, as described in the section that follows. Alternatively, apply MeloCon® WG to fumigated soil at or after planting or transplanting (see third section below). |
| Indoor- or outdoor-grown cut flowers and ornamental bulbs | Application to field soils at or after planting or transplanting | Apply 2 to 4 pounds of MeloCon® WG per acre by one of the following methods:  
  - Drenching, drip (trickle) or sprinkler application (see “Instructions for MeloCon® WG Application through Irrigation Systems”).  
  - Banded spray 4" to 6" wide, in-furrow at planting (over or under the seed line).  
  - Surface spray on moist soil with 40-100 gallons water per acre followed by incorporation using light tillage.  
  - Surface spray with 20-40 gallons water per acre followed by overhead irrigation. Use enough irrigation water to wet the soil into the root zone.  
  - Direct injection to anticipated root depth using shank or other soil injection equipment. Apply with 30-40 gallons water per acre. Pre-plant applications may be either broadcast over an entire field or concentrated (banded) into planting rows. If the soil has been fumigated recently (within 2 weeks), make the initial MeloCon® WG application to transplants just before transplanting into the field, as described in the section that follows. Alternatively, apply MeloCon® WG to fumigated soil at or after planting or transplanting (see third section below). |
| Root and tuber vegetables, including Beets (except Sugar Beets), Carrot, Cassava, Ginger, Horseradish, Parsnips, Radish, Rutabaga, Taro, Yams and Turnip | Application to field soils before planting or transplanting | Apply 2 to 4 pounds of MeloCon® WG per acre. Applications can be made by following methods:  
  - Drenching, drip (trickle) or sprinkler application (see “Instructions for MeloCon® WG Application through Irrigation Systems”).  
  - Banded spray 4" to 6" wide, in-furrow at planting (over or under the seed line).  
  - Surface spray on moist soil with 40-100 gallons water per acre followed by incorporation using light tillage.  
  - Surface spray with 20-40 gallons water per acre followed by overhead irrigation. Use enough irrigation water to wet the soil into the root zone.  
  - Direct injection to anticipated root depth using shank or other soil injection equipment. Apply with 30-40 gallons water per acre. Pre-plant applications may be either broadcast over an entire field or concentrated (banded) into planting rows. If the soil has been fumigated recently (within 2 weeks), make the initial MeloCon® WG application to transplants just before transplanting into the field, as described in the section that follows. Alternatively, apply MeloCon® WG to fumigated soil at or after planting or transplanting (see third section below).  
  - Apply to nematode-infested (non-fumigated) soil up to 14 days before planting or transplanting. Follow up with applications on the field soil at or after planting or transplanting (see third section below).  
  - Apply when soil temperature at 4-inch depth is 60ºF or higher. Bioactivity of MeloCon® WG is greatest at soil temperatures between 70º and 90ºF.  
  - If the soil has been fumigated recently (within 2 weeks), make the initial MeloCon® WG application to transplants just before transplanting into the field, as described in the section that follows. Alternatively, apply MeloCon® WG to fumigated soil at or after planting or transplanting (see third section below).  
  - Apply 2 to 4 pounds of MeloCon® WG per acre. Applications can be made by the following methods:  
  - Drenching, drip (trickle) or sprinkler application (see “Instructions for MeloCon® WG Application through Irrigation Systems”).  
  - Banded spray 4" to 6" wide, in-furrow at planting (over or under the seed line).  
  - Surface spray on moist soil with 40-100 gallons water per acre followed by incorporation using light tillage.  
  - Surface spray with 20-40 gallons water per acre followed by overhead irrigation. Use enough irrigation water to wet the soil into the root zone.  
  - Direct injection to anticipated root depth using shank or other soil injection equipment. Apply with 30-40 gallons water per acre.  
  - Pre-plant applications may be either broadcast over an entire field or concentrated (banded) into planting rows. If the soil has been fumigated recently (within 2 weeks), make the initial MeloCon® WG application to transplants just before transplanting into the field, as described in the section that follows. Alternatively, apply MeloCon® WG to fumigated soil at or after planting or transplanting (see third section below). |

(continued)
### INSTRUCTIONS FOR MeloCon® WG APPLICATION THROUGH IRRIGATION SYSTEMS

**Application through Drip (Trickle) or Sprinkler Irrigation:**

- Apply MeloCon® WG only through sprinkler, including center pivot, lateral move, end tow, side (wheel) roll, travelor, big gun, solid set, or handmove, and drip (trickle), including micro-irrigation, systems and either before planting or to the planted crop/use site at the appropriate rates indicated in the previous table. If applied in this manner, irrigate with enough water to saturate the soil to the depth of the root zone. Addition of an approved soil wetting agent at the manufacturer’s specified mix rate may enhance penetration of spores into the rooting zone. For information on which adjuvants and pesticides can be mixed with MeloCon® WG without harming the beneficial fungus it contains, contact your Technical Sales Representative or the Manufacturer.

- Do not apply MeloCon® WG through any irrigation systems other than those specified above.

- Crop injury or lack of effectiveness can result from non-uniform distribution of treated water.

- If you have questions about calibration of your irrigation system, you should contact State Extension Service specialists, equipment manufacturers or other experts.

- Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.

**A person knowledgeable of the pesticide application system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and operate a functional, reduced-pressure zone, back flow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the flow outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.**

**Pesticide Application Using Public Water Systems:**

1. Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.

2. Pesticide application systems connected to public water systems must contain a functional, reduced-pressure zone, back flow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. This shall be a complete physical break (air gap) between the flow outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.

3. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

4. The pesticide injection pipeline must contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

<td>(cont.) Root and tuber vegetables, including Beets (except Sugar Beets), Carrot, Cassava, Ginger, Horseradish, Parsnips, Radish, Rutabaga, Taro, Yams and Turnip</td>
<td>Application to transplants just before transplanting into the field</td>
<td>Mix 0.5 pound (1 3/4 cup) of MeloCon® WG in water (20-100 gallons per acre). Apply as a drench spray to 100 cubic feet of soil or other growth media in transplant flats, pots or other rooting containers. Follow the application with sufficient additional water (such as by drenching or overhead irrigation) to saturate the soil or rooting medium.</td>
</tr>
<tr>
<td>Onions, Garlic and other Bulb vegetables</td>
<td>Application to field soils at planting or transplanting</td>
<td>Apply 2 to 4 pounds of MeloCon® WG per acre by one of the following methods: • Drip (trickle) application (see “Instructions for MeloCon® WG Application through Irrigation Systems”). • Band spray 4” to 6” wide, in-furrow at planting (over or under the seed row). Apply sufficient water during or immediately after applications to thoroughly wet the soil into the root zone. MeloCon® WG can also be mixed with water and injected directly into the rooting zone using a shank or other injection equipment, preferably on both sides of the plant row. To enhance penetration of spores into the root zone, consider mixing MeloCon® WG with a soil wetting agent.</td>
</tr>
<tr>
<td>Grapevines (Wine Grapes, Table Grapes and Raisins) Berries, including Blackberries, Blueberries, Cranberry, Currants, Elderberry, Gooseberry, Huckleberry, Loganberry, Lingonberry and Raspberries</td>
<td>For multiple trees or vines (full or partial orchard or vineyard application)</td>
<td>Apply 2 to 4 pounds of MeloCon® WG per acre by one of the following methods: • Drip (trickle) application (see “Instructions for MeloCon® WG Application through Irrigation Systems”). • Micro-irrigation application (see “Instructions for MeloCon® WG Application through Irrigation Systems”). Apply through micro-irrigation only when the irrigation is soil directed, the heights of the nozzles are below the canopy and irrigation water does not come into contact with above ground harvestable food commodities. DO NOT use mist sprayers, which produce small droplets likely to drift. • Injection with 30-40 gallons water per acre directly into the root zone using a shank or other injection equipment. • Soil-directed spray with 30-100 gallons per acre from stem to drip line (outer reaches of the branches or vines), ensuring foliage and aboveground harvestable food commodities are not contacted by the spray. Apply sufficient water during or immediately after application to thoroughly wet the soil into the root zone. Alternatively, applications can be made before or during rainfall to assist in movement to the roots. To enhance penetration of spores into the root zone, consider mixing MeloCon® WG with a soil wetting agent. Repeat applications every 2-4 months or during root flush, as needed.</td>
</tr>
<tr>
<td>Citrus fruits Pome fruits, including Apple, Loquat, Pear and Quince Stone fruits, including Apricot, Cherries, Nectarine, Peach, Plums and Plumcot</td>
<td>For individual trees or vines</td>
<td>Mix 4.5 ounces (1 cup) of MeloCon® WG in 5 gallons of water, and apply as a drench or spray to the soil from stem to drip line (outer reaches of the branches or vines), ensuring foliage and aboveground harvestable food commodities are not contacted by the spray. Five gallons of mix will treat up to 500 square feet of soil, or the area under approximately 5 mature trees or vines. Apply sufficient water during or immediately after application to thoroughly wet the soil into the root zone. Alternatively, applications can be made before or during rainfall to assist in movement to the roots. To enhance penetration of spores into the root zone, consider mixing MeloCon® WG with a soil wetting agent. Repeat applications every 2-4 months or during root flush, as needed.</td>
</tr>
<tr>
<td>Tree nuts, including Almond, Beech Nut Cashew, Chestnut, Hazelnut, Macadamia Nut, Pecan and Walnut Avocado, Coffee, Pistachio, Pomegranate</td>
<td>At planting</td>
<td>For 250 plants: Mix 1 pound (3 1/2 cups) of MeloCon® WG in water (20-100 gallons per acre), and apply as a drench or coarse spray in the planting hole just before placing the plant in the hole and then around the base of each plant immediately after planting. Use conventional ground application equipment, backpack sprayers or hand-held dippers for these soil-directed applications. Water in with standard (quantity and equipment) irrigation to wet the soil into the root zone, or apply before rainfall.</td>
</tr>
<tr>
<td>Banana and Plantain</td>
<td>Established plants, every 4 months</td>
<td>For 250 plants: Mix 1 pound (3 1/2 cups) of MeloCon® WG in water (20-100 gallons per acre), Apply suspension in a 6-inch radius to the soil around daughter suckers using conventional ground application equipment or backpack sprayers. Alternatively, apply through micro-irrigation (see “Instructions for MeloCon® WG Application through Irrigation Systems”). Apply through micro-irrigation only when the irrigation is soil directed, the heights of the nozzles are below the canopy and irrigation water does not come into contact with aboveground harvestable food commodities. DO NOT use mist sprayers, which produce small droplets likely to drift. Water in with standard (quantity and equipment) irrigation to wet the soil into the root zone, or apply before rainfall.</td>
</tr>
<tr>
<td>Sugar beet</td>
<td>In-furrow application at planting</td>
<td>Apply 6 – 9 pounds of MeloCon® WG in a minimum of 20 gallons of water per acre into the seed furrow and cover with soil.</td>
</tr>
<tr>
<td>Potato / Sweet potato (Choose the most appropriate treatment method to fit your operation and management)</td>
<td>Pre-planting application</td>
<td>Apply 6 – 9 pounds of MeloCon® WG per acre to potatoes / sweet potatoes planted in 42- to 48-inch rows. Apply in a 14-inch banded or broadcast spray of 20 – 40 gallons water per acre while forming the rows / planting hills and incorporate thoroughly into the top 4-10 inches of moist soil. Can be applied up to 21 days prior to potato / sweet potato transplant. Drench at transplanting</td>
</tr>
</tbody>
</table>
Pesticide Application Using Micro-irrigation:
1. The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from back flow.
2. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
3. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
4. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
5. The irrigation line or water pump must include a functional pressure switch, which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump), effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
7. Apply only when the irrigation is soil directed, the heights of the nozzles are below the area to be treated.
8. Apply the entire treatment during the first 1/3 of the total irrigation.
9. Mix MeloCon® WG in the supply tank to a concentration appropriate to cover the area to be treated.
10. Agitation is required for mixing and maintaining the suspension of the spores of the active agent in the injection solution. Apply all MeloCon® WG within 24 hours after mixing with water.

STORAGE AND DISPOSAL
Do not contaminate water, food or feed by storage and disposal.

PESTICIDE STORAGE
Store in a cool, dry place (at 35-40°F or below), out of direct sunlight, and away from heat sources for up to 6 months. Product is stable for up to 12 months when stored frozen. Keep from overheating.

PESTICIDE DISPOSAL
To avoid wastes, use all material in this container by application according to label directions. If wastes cannot be avoided, offer remaining product to a waste disposal facility or pesticide disposal program (often such programs are run by state or local governments or by industry).

CONTAINER HANDLING
Nonrefillable container. Do not reuse or refill this container. Completely empty bag into application equipment. Then offer for recycling if available or dispose of empty bag in a sanitary landfill or by incineration. Do not burn, unless allowed by state and local ordinances. If burned, stay out of smoke. If outer box is contaminated, dispose of it in the same manner as required for the bag.

Manufactured by PROPHYTA Biologischer Pflanzenschutz GmbH, Inselstrasse 12, D-23999 Malchow/Peel, GERMANY

WARRANTY - PROPHYTA Biologischer Pflanzenschutz GmbH warrants that this product conforms to the description on this label and is reasonably fit for the purposes set forth on this label, when used according to directions under normal use conditions. Neither this warranty nor any other warranty of merchantability or fitness for a particular purpose, expressed or implied, extends to the use of this product contrary to the label instructions; the buyer assumes the risk of any such uses.
