Avicta® Duo 250 Corn

Nematicide/Insecticide
A Seed Treatment Product to Protect Corn Seedlings from
Early-Season Nematode and Insect Damage

For use only in Syngenta-certified corn seed treatment
facilities and only in seed treatment equipment with closed
transfer and application systems. Not for use in hopper box,
planter box, slurry box, or other farmer-applied applications.

Active Ingredients:
Abamectin (CAS No. 71751-41-2) . . . . . . . . . . . . . . . . . . . . . . 11.3%
Thiamethoxam (CAS No. 153719-23-4) . . . . . . . . . . . . . . . . . . 14.2%

Other Ingredients: 74.5%
Total: 100.0%

*1 fluid ounce of Avicta Duo 250 Corn is a flowable concentrate containing
3.72 grams of abamectin and 4.65 grams of thiamethoxam.

KEEP OUT OF REACH OF CHILDREN.
WARNING/AVISO
Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en
detalle. (If you do not understand the label, find someone to explain it to you in detail.)

See additional precautionary statements and directions for use in booklet.

<th>FIRST AID</th>
</tr>
</thead>
</table>
| **If inhaled** | • Move person to fresh air.  
  • If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible.  
  • Call a poison control center or doctor for further treatment advice. |
| **If swallowed** | • Call poison control center or doctor immediately for treatment advice.  
  • Have person sip a glass of water if able to swallow.  
  • Do not induce vomiting unless told to do so by the poison control center or doctor.  
  • Do not give anything by mouth to an unconscious person. |
| **If in eyes** | • Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.  
  • Call a poison control center or doctor for treatment advice. |
| **If on skin or clothing** | • Take off contaminated clothing.  
  • Rinse skin immediately with plenty of water for 15-20 minutes.  
  • Call a poison control center or doctor for treatment advice. |

Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

PRECAUTIONARY STATEMENTS

Hazards to Humans and Domestic Animals

WARNING/AVISO

May be fatal if inhaled. May be fatal if swallowed. Harmful if absorbed through skin. Causes moderate eye irritation. Do not breathe vapor. Avoid contact with skin, eyes, or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco, or using the toilet. Remove and wash contaminated clothing before reuse.

The following personal protective equipment and clothing are required when using this product:

Personal Protective Equipment (PPE)

Seed Treatment Workers

Workers involved with treating the seed (e.g., connecting and disconnecting hoses and transfer pumps, mixing, equipment calibration, etc.) must wear:

- Chemical-resistant gloves made of: barrier laminate, butyl rubber ≥ 14 mils, nitrile rubber ≥ 14 mils, neoprene rubber ≥ 14 mils, polyvinyl chloride (PVC) ≥ 14 mils, or Viton® ≥ 14 mils
- Protective eyewear
- Coveralls worn over long-sleeved shirt and long pants
- Chemical-resistant apron
- Shoes and socks
- NIOSH-approved respirator with any N, R, P filter with NIOSH approval number prefix TC-84A; or a NIOSH approved power air purifying respirator with HE filter with NIOSH approval number prefix TC-21C

Workers filling Seed Containers/Baggers and Bag Sewers must wear:

- Chemical-resistant gloves made of: barrier laminate, butyl rubber ≥ 14 mils, nitrile rubber ≥ 14 mils, neoprene rubber ≥ 14 mils, polyvinyl chloride (PVC) ≥ 14 mils, or Viton ≥ 14 mils
- Protective eyewear
- Coveralls worn over long-sleeved shirt and long pants
- Shoes and socks
- NIOSH-approved respirator with any N, R, P filter with NIOSH approval number prefix TC-84A; or a NIOSH approved power air purifying respirator with HE filter with NIOSH approval number prefix TC-21C

Workers involved with the clean-up and maintenance of seed treatment equipment must wear:

- Chemical-resistant gloves (minimum length 12 inches) made of: barrier laminate, butyl rubber ≥ 14 mils, nitrile rubber ≥ 14 mils, neoprene rubber ≥ 14 mils, polyvinyl chloride (PVC) ≥ 14 mils, or Viton ≥ 14 mils. Important: Tape gloves down to the sleeves of the coveralls.
- Protective eyewear
- Chemical-resistant, hooded coveralls worn over long-sleeved shirt and long pants
- Shoes and socks
- NIOSH-approved respirator with an organic vapor (OV) cartridge or canister with a combination N, R, or P filter with NIOSH approval number prefix TC-84A; OR NIOSH approved gas mask with an organic vapor canister with NIOSH approval number prefix TC-14G; OR a NIOSH approved powered air purifying respirator with organic vapor (OV) cartridge and combination HE filter with NIOSH approval number prefix TC-23C

**Multiple Task Workers must wear:**
(Multiple task workers perform multiple tasks in one day such as mixing, product application, filling seed containers/bagging, bag sewing, and clean-up.)

- Chemical-resistant gloves made of: barrier laminate, butyl rubber ≥ 14 mils, nitrile rubber ≥ 14 mils, neoprene rubber ≥ 14 mils, polyvinyl chloride (PVC) ≥ 14 mils, or Viton ≥ 14 mils. Important: When performing seed treatment equipment clean-up procedures, gloves must be at least 12 inches long and taped down to the sleeves of the coveralls.
- Protective eyewear
- Long-sleeved shirt and long pants
- When performing seed treatment equipment clean-up procedures, chemical-resistant, hooded coveralls over long-sleeved shirt and long pants are required.
- Shoes and socks
- NIOSH-approved respirator with any N, R, P filter with NIOSH approval number prefix TC-84A; or a NIOSH approved powered air purifying respirator with HE filter with NIOSH approval number prefix TC-21C

**Environmental Hazards**

This pesticide is toxic to fish and wildlife and highly toxic to aquatic invertebrates. Treated seeds exposed on the soil surface may be hazardous to wildlife. Cover or collect seeds spilled during loading. Do not contaminate water when disposing of equipment washwater or rinsate.

**Pollinator Precautions**

Thiamethoxam is highly toxic to bees exposed to direct treatment, and effects may be possible as a result of exposure to translocated residues in blooming crops.

**Groundwater Advisory**

This product contains thiamethoxam which has properties and characteristics associated with chemicals detected in groundwater. This chemical may leach into groundwater if used in areas where soils are permeable, particularly where the water table is shallow.
# CONDITIONS OF SALE AND LIMITATION OF WARRANTY AND LIABILITY

**NOTICE:** Read the entire Directions for Use and Conditions of Sale and Limitation of Warranty and Liability before buying or using this product. If the terms are not acceptable, return the product at once, unopened, and the purchase price will be refunded.

The Directions for Use of this product must be followed carefully. It is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as manner of use or application, weather or crop conditions, presence of other materials or other influencing factors in the use of the product, which are beyond the control of SYNGENTA CROP PROTECTION, LLC or Seller. To the extent permitted by applicable law, Buyer and User agree to hold SYNGENTA and Seller harmless for any claims relating to such factors.

SYNGENTA warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use, subject to the inherent risks referred to above, when used in accordance with directions under normal use conditions. To the extent permitted by applicable law: (1) this warranty does not extend to the use of the product contrary to label instructions, or under conditions not reasonably foreseeable to or beyond the control of Seller or SYNGENTA, and (2) Buyer and User assume the risk of any such use. TO THE EXTENT PERMITTED BY APPLICABLE LAW, SYNGENTA MAKES NO WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE NOR ANY OTHER EXPRESS OR IMPLIED WARRANTY EXCEPT AS WARRANTED BY THIS LABEL.

To the extent permitted by applicable law, in no event shall SYNGENTA be liable for any incidental, consequential or special damages resulting from the use or handling of this product. TO THE EXTENT PERMITTED BY APPLICABLE LAW, THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE EXCLUSIVE LIABILITY OF SYNGENTA AND SELLER FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR OTHERWISE) RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT OR, AT THE ELECTION OF SYNGENTA OR SELLER, THE REPLACEMENT OF THE PRODUCT.

SYNGENTA and Seller offer this product, and Buyer and User accept it, subject to the foregoing Conditions of Sale and Limitation of Warranty and Liability, which may not be modified except by written agreement signed by a duly authorized representative of SYNGENTA.
**DIRECTIONS FOR USE**

Restricted Use Pesticide

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

- This product must be used only in seed treatment equipment with closed transfer application systems.
- Avicta Duo 250 Corn is only for use in Syngenta-certified seed treatment facilities: Use in hopper box, planter box, slurry box, or other farmer-applied applications is not permitted.
- Treatment of highly mechanically scarred or damaged seed or seed known to be of low vigor and poor quality may result in reduced germination and/or reduction of seed and seedling vigor. Conduct germination tests with a representative sample of the seed lot before committing the total seed lot to a selected seed treatment. Because seed quality and seed storage conditions are beyond the control of Syngenta, no claims are made to guarantee the germination of seed or propagating material for all crops.
- Seed treated with this product must be visually identifiable from untreated seed by the use of an approved colorant or dye to prevent accidental use of treated seed as food for humans or feed for animals. Refer to 21 CFR, Part 2.25. Any colorant or dye added to treated seed must be cleared for use in accordance with 40 CFR, Part 180.1001. Refer to the section on this label **REQUIRED SEED CONTAINER STATEMENTS** for language that must appear on the tag that is attached to the container of treated seed.

**PRODUCT INFORMATION**

Avicta Duo 250 Corn is a corn seed treatment nematicide/insecticide that contains the active ingredients abamectin and thiamethoxam. When Avicta Duo 250 Corn is applied to corn seed, seedlings are protected from early-season nematode damage and damage from the insect pests specified in the **Crop Use Directions**.

**REQUIRED SEED CONTAINER STATEMENTS**

The Federal Seed Act requires that the container of corn seed treated with Avicta Duo 250 Corn must be labeled with the following statements:

- This seed has been treated with abamectin nematicide and thiamethoxam insecticide.
- Do not use treated seed for feed, food, or oil purposes.
In addition, the U.S. Environmental Protection Agency requires the following statements on the container of corn seed treated with Avicta Duo 250 Corn.

- Store away from food and feedstuffs.
- Do not allow children, pets or livestock to have access to treated seeds.
- Wear long-sleeved shirt, long pants, and chemical-resistant gloves: barrier laminate, butyl rubber ≥ 14 mils, nitrile rubber ≥ 14 mils, neoprene rubber ≥ 14 mils, polyvinyl chloride (PVC) ≥ 14 mils, or Viton ≥ 14 mils when handling treated seed.
- Treated seed must be planted into the soil at a depth greater than 1 inch.
- Treated seeds exposed on soil surface may be hazardous to wildlife; cover or collect treated seeds that are spilled during loading and in areas such as row ends.
- Dispose of all excess treated seed by burying seed away from bodies of water.
- Dispose of seed packaging in accordance with local requirements.
- Do not contaminate bodies of water when disposing of planting equipment wash water.
- **Pollinator Precautions**: Thiamethoxam is highly toxic to bees and other pollinating insects exposed to direct treatment, and effects may be possible as a result of exposure to translocated residues in blooming crops.
- **Groundwater Advisory**: This product contains thiamethoxam which has properties and characteristics associated with chemicals detected in groundwater. This chemical may leach into groundwater if used in areas where soils are permeable, particularly where the water table is shallow.
- Do not apply a neonicotinoid insecticide to corn whose seed has been treated with Avicta Duo 250 Corn.
- Do not apply at a rate that will result in more than 0.165 lb of thiamethoxam/acre/calendar year (74.8 g) as a seed treatment application. This seed has been treated with x mg thiamethoxam per seed.
- Do not apply at a rate that will result in more than 0.033 lb of abamectin/acre/calendar year (15 g) as a seed treatment application. This seed has been treated with x mg abamectin per seed.
In the event of crop failure or after harvest of corn grown from Avicta Duo 250 Corn treated corn seed, the following crops may be replanted immediately:

<table>

</table>

For any other crop, the minimum plant back interval is 120 days from the date the Avicta Duo 250 Corn treated corn seeds were planted. A cover crop other than the crops listed above that is planted for erosion control or soil improvement may be planted sooner than the 120 day interval; however, the crop may not be grazed or harvested for food or feed.
In addition, include the following statements on containers of corn seed treated with Avicta Duo 250 Corn:

- Plant Avicta Duo 250 Corn treated corn seed based upon the local planting dates and soil temperatures that are recommended by your state agricultural extension agent.
- In limited areas birds, such as Sand Hill Cranes, have been known to damage early, developing corn seedlings.
  - Some seed-applied or hopper box-applied bird repellents have been shown to be effective in reducing this damage.
  - In fields where seedling damage is expected, use of an approved bird repellent should be considered.

**RESISTANCE MANAGEMENT**

<table>
<thead>
<tr>
<th>GROUP</th>
<th>4A</th>
<th>6</th>
<th>INSECTICIDES</th>
</tr>
</thead>
</table>

Avicta Duo 250 Corn contains thiamethoxam, a Group 4A insecticide, and abamectin, a Group 6 insecticide. Thiamethoxam is a systemic insecticide belonging to the neonicotinoid class of chemistry which includes nicotinic acetylcholine receptor (nAChR) agonists. Abamectin belongs to the avermectin class of chemistry which affects nerves and muscles.

Insect populations may contain individuals naturally resistant to Group 4A or 6 insecticides and if used repeatedly in the same fields, then resistant members may eventually dominate the population. Because resistance development cannot be predicted, use sound resistance management strategies established for the crop and use area.

Base seed treatment on an integrated pest management program that includes field sanitation, historical information related to pesticide use, careful selection of pest-tolerant crop varieties, scouting, and management practices which optimize populations of natural enemies of insect pests such as within-field refuge (untreated areas). Sound management programs also consider cultural and biological control practices.

**In order to maintain susceptibility to these classes of chemistry:**

- Use products at their full specified doses.
- Use appropriate, well-maintained equipment. Use specified water volumes and apply at optimal temperatures in order to obtain optimal treatment.
• When rate ranges are given, use the higher rate within the listed rate range when insect pressure is expected to be high.

• Avoid using a single active ingredient or mode of action (same insecticide group) exclusively for season long control of insect species with more than one generation per crop season.

• For insect species with successive or overlapping generations, use a treatment window approach. A treatment window is a period of time defined by the stage of crop development and the biology of the pests of concern. Within the treatment window, depending on the length of residual activity, single or consecutive applications may be made using seed, in-furrow, or foliar treatments unless otherwise excluded by product labels. Do not exceed the maximum amount of this insecticide’s mode of action allowed per growing season.

• Following a treatment window of this insecticide’s mode of action, rotate to a treatment window of effective products with a different mode of action before making additional applications of this insecticide.

If resistance to this product develops in your area, this product or other products with a similar mode of action may not provide adequate control. If poor performance cannot be attributed to improper application or weather conditions, a resistant strain of insect may be present. If you experience difficulty with control and resistance is a reasonable cause, immediately consult your local company representative or agricultural advisor for the best alternative method of control for the crop and use area.

Syngenta encourages responsible product stewardship to ensure effective long term control of the insect pests on this label.

For additional information on Insect Resistance Management:

• Contact Syngenta representatives at 1-800-334-9481

• Contact your local Cooperative Extension Service specialist, pest control advisor, or certified crop advisor.

• Visit the Insecticide Resistance Action Committee (IRAC) on the web at: http://www.irac-online.org/
In the event of crop failure or after harvest of corn grown from Avicta Duo 250 Corn treated corn seed, the following crops may be replanted immediately:

For any other crop, the minimum plant back interval is 120 days from the date the Avicta Duo 250 Corn treated corn seeds were planted. A cover crop other than the crops listed above that is planted for erosion control or soil improvement may be planted sooner than the 120 day interval; however, the crop may not be grazed or harvested for food or feed.
MIXING AND APPLICATION INSTRUCTIONS

• Consult the Syngenta Seed Treatment representative or the manufacturer of the application equipment you plan to use regarding the suitability of this application and equipment calibration and operating instructions.

• Always treat seed in a well-ventilated area. Refer to the Precautionary Statements section of this label for personal protective equipment requirements and other safety precautions.

• Prepare no more mixture than is needed for the immediate operation.

• Avicta Duo 250 Corn must be thoroughly recirculated in its original container before using. (See Mixing Instructions.)

• Apply Avicta Duo 250 Corn as a water-based slurry utilizing standard slurry seed treatment equipment that will provide uniform seed coverage. Uneven or incomplete seed coverage may not give the desired level of nematode and insect control.

• Thoroughly mix the required amount of Avicta Duo 250 Corn and other seed treatment products desired with the amount of water required for the slurry treater and the dilution rate. (See Avicta Duo 250 Corn in Tank Mixtures.)

• Use an EPA-approved dye or colorant that imparts an unnatural color to the seed.

• Allow seed to dry before bagging /filling containers, and store treated seed away from feed and foodstuffs.

Avicta Duo 250 Corn in Tank Mixtures:
It is the pesticide user’s responsibility to ensure that all products in a tank mix are registered for the intended use. Read and follow the applicable restrictions, limitations, and directions for use on all product labels involved in tank mixing. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

To add early-season disease protection, the seed treatment fungicides specified in the Crop Use Directions are approved for use on corn seed and may also be mixed with Avicta Duo 250 Corn.
Compatibility:
Before mixing Avicta Duo 250 Corn with other seed treatment products, determine if all of the products are compatible by conducting a compatibility test:

1. In a clear glass container thoroughly mix all of the intended seed treatment products with the appropriate amount of water, and allow the mixture to sit for one hour.
2. Remix the solution and observe for incompatibility.
3. If compatibility is acceptable, follow the mixing instructions in the Mixing Instructions section on this label.

Mixing Instructions:
A. Avicta Duo 250 Corn Alone:
   1. To dispense Avicta Duo 250 Corn into a mix tank, first attach a pump with fittings (example: Micro Matic) that match the fittings on the Avicta Duo 250 Corn container.
   2. Recirculate product. Recirculation time should be calculated based upon the ability of the pump to completely recirculate the volume of the tank 5-10 times within a 30-minute time period.
   3. After the initial recirculation, a short recirculation period of 5 minutes per day is recommended.
   4. Attach the dispensing hose to a dry-lock type of fitting that is permanently attached to the mix tank lid.
   5. Add 1/4-1/2 of the required amount of water to the mix tank.
   6. With the agitator running, add the Avicta Duo 250 Corn to the tank.
   7. Continue agitation while adding the remainder of the water.
   8. Begin application of the solution after the Avicta Duo 250 Corn has completely dispersed into the mix water.
   9. Maintain agitation until all of the mixture has been applied.

B. Avicta Duo 250 Corn - Tank Mixing Instructions:
   1. Add 1/2 of the required water to the mix tank and turn on the agitation. Mechanical agitation is preferred.
   2. If using wettable powders and/or products in water-soluble packaging, add water-soluble packages first to clean water and allow them to completely disperse before adding Avicta Duo 250 Corn or other products.
   3. Allow each tank mix partner to completely disperse before adding the next product.
   4. Add the remaining amount of water and agitate.
   5. Maintain agitation until the entire slurry mixture has been used.
**CROP USE DIRECTIONS**

**Avicta Duo 250 Corn on Corn Seed (includes corn grown for seed, field corn, popcorn, and sweetcorn)**

Avicta Duo 250 Corn is a seed treatment for corn grown for seed, field corn, popcorn, and sweetcorn. Avicta Duo 250 Corn contains the active ingredients abamectin and thiamethoxam. Avicta Duo 250 Corn alone will provide corn seedlings early-season protection from damage caused by nematodes and the insects specified in the *Application* table. Tank mixing Avicta Duo 250 Corn with additional thiamethoxam (Cruiser® 5FS) will provide protection from damage caused by additional insects. Tank mixing Avicta Duo 250 Corn with seed treatment fungicides will add early-season disease protection. Refer to the following table for application directions.

</tbody>
</table>
| Additional Insects: | In addition to the amount of Avicta Duo 250 Corn specified above, to protect corn seedlings from billbug and corn rootworm damage, apply Cruiser 5FS to the corn seed to achieve a total of 1.25 mg of thiamethoxam per seed.  
1) Apply Avicta Duo 250 Corn at a rate to achieve:  
0.2000 mg abamectin/0.25 mg thiamethoxam per seed  
0.2500 mg abamectin/0.3125 mg thiamethoxam per seed  
NOTE:  
• 1 fl oz of Avicta Duo 250 Corn contains 3.72 grams of abamectin and 4.65 grams of thiamethoxam.  
• The typical density of Avicta Duo 250 Corn is 9.25 lb per gallon.  
2) Then add the amount of Cruiser 5FS to achieve: a total of 1.25 mg of thiamethoxam per seed.  
NOTE:  
One fl oz of Cruiser 5FS contains 17.7 grams of thiamethoxam. | Avicta Duo 250 Corn contains the active ingredients abamectin and thiamethoxam. Cruiser 5FS is a seed treatment insecticide that contains only the active ingredient, thiamethoxam. To add protection from billbug and corn rootworm damage to Avicta Duo 250 Corn treated corn seed, Cruiser 5FS must be mixed with Avicta Duo 250 Corn to increase the amount of thiamethoxam per seed. |
| Disease Protection – Early Season | For the amount of fungicide to apply, refer to the EPA-approved label for the corn seed treatment fungicide. | To add early season and broad spectrum disease protection for corn seedlings, treating corn seed with a mixture of Avicta Duo 250 Corn plus seed treatment fungicides registered for use on corn seed, such as Apron XL®, Dynasty®, Maxim® Quattro, Vibrance® and Maxim® XL, is highly recommended. |

**Restriction:** Do not apply at a rate that will result in more than 0.165 lb of thiamethoxam/acre/calendar year (74.8 g) as a seed treatment application.  
Do not apply at a rate that will result in more than 0.033 lb of abamectin/A/ calendar year (15.0 g ai) as a seed treatment application.
CLEANING SEED TREATMENT EQUIPMENT

Do not use compressed air hoses to remove the dust from the seed treating equipment or the area around the equipment; use a central vacuum system or a HEPA filter portable vacuum cleaner.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

Pesticide Storage
Store in a cool, dry place.

Pesticide Disposal
Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture or rinsate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste Representative at the nearest EPA Regional Office for guidance.

Container Handling
Nonrefillable container. Do not reuse or refill this container. Syngenta’s authorized agent will pick up the empty container and handle its disposal. Contact Syngenta or its authorized agent to make arrangements for this service and store empty container in a secure area until pick up.

Triple rinse container promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two more times. Then contact Syngenta or its authorized agent for disposal.

For minor spills, leaks, etc., follow all precautions indicated on this label and clean-up immediately. Take special care to avoid contamination of equipment and facilities during cleanup procedures and disposal of wastes.

CONTAINER IS NOT SAFE FOR FOOD, FEED, OR DRINKING WATER!
