CAUTION:
Harmful if swallowed or absorbed through skin. Causes moderate eye irritation. If inhaled, remove to fresh air. If breathing is difficult, call a physician. If on skin or clothing: Wash thoroughly with soap and water. If in eyes: Rinse eyes with running water for at least 15 minutes. If on skin: Wash thoroughly with soap and water. If swallowed: Do not induce vomiting unless told to do so by the poison control center. If vomiting occurs, call a physician or poison control center. Have the container or label with you. See side panels for First Aid, additional precautionary statements, and Directions for Use.

NOTE TO VETERINARIAN
For animals ingesting bait and/or showing poisoning signs (bleeding or elevated prothrombin times), give Vitamin K1, if needed, check prothrombin times every 3 days until values return to normal (up to 30 days). In severe cases, blood transfusions may be needed.

NOTE TO PHYSICIAN
If an animal eats this bait, call a veterinarian or 1-877-854-2494. TREATMENT FOR PET POISONING
• Call a poison control center, doctor, or veterinarian immediately for advice.
• Have the container or label with you.
• Remove any unused bait from animal contact and place away from pet access. Norwe rats, roof rats, and house mice may consume a lethal dose in one night's feeding with the first dead rodents appearing four or five days after feeding begins.

STORAGE AND DISPOSAL
Do not contaminate water, food, or feed by storage or disposal. Pesticide Storage: Do not store this product in a manner inconsistent with its labeling. READ THIS LABEL: Read this entire label and follow all use directions and use precautions. Use only for sites, pests and application methods described on this label. IMPORTANT: Do not expose children, pets, or nontarget animals to rodenticides. To help prevent exposure:
1. Store unused product out of reach of children and pets.
2. Apply bait in locations out of reach of children, pets, domestic animals and nontarget wildlife, or in tamper-resistant bait stations. These stations must be resistant to destruction by dogs and by children under six years of age, and must be used in a manner that prevents such children from reaching into bait compartments and obtaining bait. If bait can be shaken from bait stations when they are lifted, units must not be used. Replacement stations must be used wherever children, pets, non-target mammals, or birds may have access to the bait placement location.

USE RESTRICTIONS: This product may only be used to control the following rodent pests in and around man-made structures: House mouse (Mus musculus), Norway rat (Rattus norvegicus), Roof rat (Rattus rattus), Cotton rat (Sigmodon hispidus), Eastern harvest mouse (Reithrodontomys humulis), Golden mouse (Otomys ornatus), Polynesian rat (Rattus exulans), Meadow vole (Microtus pennsylvanicus), White-throated woodrat (Neotoma albigula), Southern plains woodrat (Neotoma micropus), and Mexican woodrat (Neotoma mexicana). This product must be used in and within 100 feet of man-made structures constructed in a manner so as to be vulnerable to commensal rodent invasions and/or to harboring or attracting rodent infestations. Examples of such structures include homes and other permanent or temporary residences, food processing facilities, industrial and commercial buildings, trash receptacles, agricultural and public buildings, transport vehicles (ships, trains, aircraft), docks and port or terminal buildings and related structures around and associated with these sites. Fence and perimeter baiting, beyond 100 feet from a structure as defined above, is prohibited. This product must not be applied directly to food or feed crops. Do not broadcast bait.

DIRECTIONS FOR USE (Continued from other panel)
Be secure or otherwise immobilized. Stronger bait stations are needed in areas open to hooved livestock, raccoons, bears, or other potentially destructive animals, or in areas prone to vandalism. 3. Dispose of product container and unused, spoiled, or un consumed bait as specified on this label.

Bait stations are mandatory for outdoor, above-ground use. Tamper-resistant bait stations must be used wherever children, pets, non-target mammals, or birds may have access to the bait placement location.

 cănenting rodent invasions and/or to harboring or attracting rodent infestations. Examples of such structures include homes and other permanent or temporary residences, food processing facilities, industrial and commercial buildings, trash receptacles, agricultural and public buildings, transport vehicles (ships, trains, aircraft), docks and port or terminal buildings and related structures around and associated with these sites. Fence and perimeter baiting, beyond 100 feet from a structure as defined above, is prohibited. This product must not be applied directly to food or feed crops. Do not broadcast bait.

Do not apply this product directly to food or feed crops. Do not contaminate water, food, feedstuffs, food or feed handling equipment, or milk or meat handling equipment or surfaces that come into direct contact with food. When used in USDA inspected facilities, this product must be applied in tamper-resistant bait stations. Do not use this product in sewers.

Do not sell this product in individual containers holding less than 14 pounds of bait.

SELECTION OF TREATMENT AREAS: Determine areas where rats, mice or meadow voles will most likely find and consume bait. Generally, these areas are along walls, by grated openings, in corners and concealed places, between floors and walls, or in locations where rats, mice, or meadow voles”, or their signs have been observed. Remove as much alternative food as possible.

APPLICATION DIRECTIONS: Rate: Apply 3 to 16 ounces per placement, usually spaced 15 to 30 feet apart. Maintain a constant supply of fresh bait for 10 days or until signs of rat activity cease.

Nicke and Meadow Voles**: Apply 1/4 to 1/2 oz. (1-2 tablet) suspensions of bait per placement at 6 to 12 foot intervals. Larger placements (up to 2 oz.) may be needed at points of very high activity. Maintain an uninterrupted supply of fresh bait for at least 15 days or until signs of mice or meadow voles activity cease.

Follow-up: Replace contaminated or spoiled bait immediately. Wearing waterproof gloves, collect and properly dispose of all viable dead animals and leftover bait. To discourage reinfestation, limit sources of rodent food, water, and harborage as much as possible. If reinfestation occurs, repeat treatment. For a continuous infestation, set permanent bait stations and replenish bait as needed.

*Not permitted for use against the following species in California: Cotton rat, Eastern harvest mouse, Golden mouse, Polynesian rat, Meadow vole, White-throated woodrat, Southern plains woodrat, and Mexican woodrat.
