Sequence®
Herbicide

Foliar systemic herbicide with residual weed control for corn

Active Ingredient:
*Glyphosate: N-(phosphonomethyl) glycine ............................................................. 21.8%
**S-metolachlor (CAS No. 87392-12-9) ................................................................. 29.0%
Other Ingredients: .................................................................................................... 49.2%
Total: ................................................................................................................. 100.0%

*Contains 2.25 pounds of glyphosate acid per U.S. gallon.
**Contains 3 pounds of S-metolachlor per U.S. gallon.

KEEP OUT OF REACH OF CHILDREN.

CAUTION

EPA Reg. No. 100-1185

All applicable directions, restrictions and precautions on the EPA-registered label are to be followed. Before using Sequence as permitted according to this supplemental label, read and follow all applicable directions, restrictions, and precautions on the EPA registered label on or attached to the pesticide product container. This Supplemental Labeling contains revised use instructions and or restrictions that may be different from those that appear on the container label. This Supplemental Labeling must be in the possession of the user at the time of pesticide application. It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

DIRECTIONS FOR USE

CORN – FOR USE IN AZ, ID, NC, NV, OR, ND, SD, SC, GA, FL, AL, MS, AR, TN, LA, TX, NM, OK, CA, CO, NE, WA, AND WY, MI, MN, VA, MD, DE, WV, PA, NJ, CT, NY, MA, RI, VT, NH, ME, MT, ID, UT; KS, WI

Sequence can be applied to corn preplant and preemergence. It can also be applied postemergence over-the-top to glyphosate tolerant corn, including Roundup Ready® varieties only. Read and follow all directions for use for corn.

Preplant and Preemergence Applications for Corn (Including Glyphosate Tolerant Corn Such as Roundup Ready Corn)

When to Apply: Apply before, during, or after planting, but before crop emergence.

Follow directions in the APPLICATION AND MIXING PROCEDURES, SPRAY ADDITIVES, and APPLICATION EQUIPMENT AND METHODS sections. Refer to WEED CONTROL section (Tables 1-3) for weeds controlled and application rates.

Use Precautions for Preplant and Preemergence Applications in Corn

- On coarse soils apply a maximum of 3.5 pt/A of Sequence.
- On medium or fine soils apply a maximum of 4.0 pt/A of Sequence.
- Do not exceed 4.0 pt/A of Sequence per year as a preplant or preemergence application.
- Injury may occur following the use of Sequence under abnormally high soil moisture conditions during early development of the crop.
- Do not apply Sequence to emerged conventional corn, as severe crop injury will occur.
- In preplant or preemergence applications, control of weeds may be improved by adding dry ammonium sulfate at 8.5-17.0 pounds/100 gallons of water.
Tank Mixtures for Corn (Preplant and Preemergence Applications Only)

Sequence can be tank mixed with the following herbicides and insecticides:

AAtrex® (atrazine)  Dual II Magnum®
Aim™  Frontier®
Ambush®  Guardsman®
Axiom®  Harness®
Balance® Pro  Harness® Xtra
Basis®  Hornet™
Bicep Magnum®  Karate® Insecticide with Zeon™ Technology
Bicep II Magnum®  Lasso®
Bicep Lite II Magnum®  Lightning®
Bullet®  Lexar™
Callisto®  Lumax®
Camix®  Marksmen®
Clarity®  Micro-Tech®
Degree™  Princep®
Degree Xtra™  Prowl®
Dicamba  Touchdown®
Distinct®  Warrior® Insecticide with Zeon™ Technology
Dual Magnum®  2,4-D

Refer to this label and the labels of tank mix partners for application methods and timings, precautionary statements, restrictions, rates, and weeds controlled.

Broad spectrum insecticide in tank mixes can cause flare-ups of secondary pests under certain conditions and should be used only when pest populations have reached economic threshold.

Postemergence Over-the-Top Applications for Glyphosate Tolerant Corn, Including Agrisure™ GT and Roundup Ready Varieties

When to Apply: Postemergence in Roundup Ready corn.

Follow directions in the APPLICATION AND MIXING PROCEDURES, SPRAY ADDITIVES, and APPLICATION EQUIPMENT AND METHODS sections. Refer to WEED CONTROL section (Tables 1-3) for weeds controlled and application rates.

Use Precautions for Postemergence Over-the-Top Use on Glyphosate Tolerant Corn, Including Roundup Ready Varieties

- Make postemergence applications from emergence through the V8 stage or until corn reaches 30 inches, whichever comes first.
- Applications may be made to corn from 30 to 48 inches in height using ground
equipment and drop nozzles only.

- Avoid application of spray into whorls of corn plants.

- Do not exceed 3.5 pints/A of Sequence in a single application.

- Do not exceed 5.0 pints/A of Sequence per season.

- Do not exceed 3.9 pints/A per season from this product and Dual Magnum. Each pint of Sequence contains approximately 0.4 pint of Dual Magnum.

- Do not exceed 1.5 lbs. on an acid equivalent basis per acre of glyphosate per season from all postemergence applications. Each pint of Sequence contains approximately 0.3 lb. glyphosate acid.

- Apply in water as the carrier for postemergence applications in glyphosate tolerant corn.

- Make postemergence applications at least 50 days before harvest.

- Do not graze or feed forage from treated areas for 30 days after application. Do not harvest sweet corn ears from treated areas for 30 days following application.

- Sequence treated corn leaves may exhibit necrotic spotting. This does not affect normal plant growth and crop yield.

- Do not use Sequence postemergence on glyphosate tolerant corn if plants are under any type of stress including but not limited to drought, insect, disease, or injury from cultivation.

Sequence can be tank mixed with the following herbicides and insecticides:
