1" BROMINATING TABLETS
Bactericide • Algaecide • Disinfectant

ACTIVE INGREDIENT: Sodium bromate, Sodium hypobromite

CONTAINER HANDLING:
- Keep out of reach of children
- Do not break or crush tablets and avoid exposure to dust
- Store in a cool, dry place
- Do not store in the presence of chlorine
- Do not break or crush tablets
- Do not store in the presence of chlorine

DIRECTIONS FOR USE:
- When water clarification can not be achieved, drain, clean, and refill the spa.
- To a great extent, defoamers, clarifiers, as well as shock treatments will improve water clarity.
- Cloudiness is due to the accumulation of suspended particles in the water.
- Maintain spa by adding 3 tablets per 300 gallons every 5-7 days or as needed to maintain an active bromine residual of between 3 and 5 ppm at all times.
- Apply a weekly treatment through the use of a floating brominator or by adding 31 tablets per 10,000 gallons every 5-7 days or as needed to maintain a active bromine residual of 2-3 ppm at all times.
- The same treatment must be followed each time you drain and refill your spa or hot tub with fresh water.
- Introduce 3 tablets per 300 gallons of spa water.
- Sodium bromide for each 100 gallons of water.
- Active bromine residual of between 3 and 5 ppm at all times.
- In newly filled pools, shock the pool if necessary. Follow directions for use on label and adjust the flow rate through the brominator if necessary.
- Maintain pool by adding 3 tablets per 300 gallons every 5-7 days or as needed to maintain an active bromine residual of 2-3 ppm at all times.
- The same treatment must be followed each time you drain and refill your pool or spa with fresh water.
- Sodium bromide for each 100 gallons of water.
- Active bromine residual of between 3 and 5 ppm at all times.
- In newly filled pools, shock the pool if necessary. Follow directions for use on label and adjust the flow rate through the brominator if necessary.
- Maintain pool by adding 3 tablets per 300 gallons every 5-7 days or as needed to maintain an active bromine residual of 2-3 ppm at all times.
- The same treatment must be followed each time you drain and refill your pool or spa with fresh water.
- Sodium bromide for each 100 gallons of water.
- Active bromine residual of between 3 and 5 ppm at all times.

HAZARDS TO HUMANS AND DOMESTIC ANIMALS
- Causes irreversible eye damage and skin burns. Eye contact may cause loss of vision.
- Inhalation of aerosol or dust may cause respiratory distress.
- Swallowed: Do not induce vomiting, rinse the mouth, and seek medical attention immediately.
- Do not smoke or handle tobacco, or use the toilet.
- Remove contaminated clothing and wash before reuse.
- Use with caution, and wash hands thoroughly after exposure.
- Persons with asthma, or those who are allergic to bromine, should avoid exposure.
- Keep away from children and pets.

PESTICIDE STORAGE:
- Keep this product dry in the tightly closed, original container when not in use.
- Store this product in a well-ventilated area, away from food and feed.
- Keep out of reach of children.

PESTICIDE DISPOSAL:
- The product must be emptied into the waste stream or treated as hazardous waste.
- If drum contents are contaminated or decomposing, do not reseal container;
- Follow local, state, or federal disposal requirements.
- Contact your State Pesticide or Environmental Protection Agency for disposal instructions.

PREVENTION OF PROPERTY DAMAGE:
- Contact between this product in its undissolved state and metal, aluminum, stainless steel, brass, copper, or other metal should be avoided.
- Be aware that this product may cause staining or discoloration of metal surfaces.
- Use caution when handling this product, as it may cause staining or discoloration of metal surfaces.

PREFERRED FIRST AID:
- For skin contact, remove contaminated clothing and wash immediately.
- For eye contact, flush with plenty of water for at least 15 minutes.
- Call a poison control center or doctor for treatment advice.
- Have this material available for the poison control center: Lot No: 12000265

NOTE TO PHYSICIAN:
- Refer to the product label and the current edition of the Poison Control Center Manual.
- If the patient is known to be allergic to bromine, refer to the Poison Control Center for advice on treatment.

HAZARDS TO DOMESTIC ANIMALS:
- If ingested, consult a veterinarian or contact the nearest poison control center.
- If skin contact occurs, wash the affected area with soap and water.
- If eye contact occurs, flush with water for at least 15 minutes.
- Call a veterinarian or the nearest poison control center for treatment advice.

Note:
- This product is not a Food Additive and does not contain any of the chemicals listed in Food Additive Amendment No. 1.

WARRANTY:
- The manufacturer warrants that this product conforms to its chemical description and is reasonably fit for the purposes stated on the label when used in accordance with label directions.
- Seller warrants that this product conforms to its chemical description and is reasonably fit for the purposes stated on the label when used in accordance with label directions.
- Seller warrants that this product conforms to its chemical description and is reasonably fit for the purposes stated on the label when used in accordance with label directions.
- Seller warrants that this product conforms to its chemical description and is reasonably fit for the purposes stated on the label when used in accordance with label directions.
- Seller warrants that this product conforms to its chemical description and is reasonably fit for the purposes stated on the label when used in accordance with label directions.
- Seller warrants that this product conforms to its chemical description and is reasonably fit for the purposes stated on the label when used in accordance with label directions.

WARNING:
- This product contains sodium bromate, a neurotoxin.
- Exposure to this material may cause adverse health effects.
- Avoid contact with eyes, nose, and mouth.
- Wear a respirator and protective clothing.
- Do not use on wet, painted surfaces, or other property that may be damaged by this material.
1" Brominating Tablets

Bactericide - Algaecide - Disinfectant

Active Ingredient:
Bromochloro-5, 6-dichloroindan-4-one

Technical Grade:
3354 Superior Ave.
3/9/10
P.O. Number:
White

PRECAUTIONARY STATEMENTS AND FIRST AID

DIRECTIONS FOR USE

Bromine tablets are supplied in Waddington cell paper. Tablets are supplied in premeasured quantities for 1" models. The active bromine residual is between 3 and 5 ppm at all times. Erosion of active bromine is dependent on the amount of chlorine and pH of the water. At pH levels greater than 7.3, the active bromine residual will be eroded by chlorine and the sodium bromide content of the product. The higher the pH, the more rapidly the active bromine residual will be eroded.

Add 1 tablet for each 1000 gallons of water. The amount of bromine required in the pool will depend upon the filtration cycle. The length of filtration cycle will vary depending on the amount of usage of the pool or spa. Each time the pool or spa is drained and refilled with fresh water, the amount of bromine required will be increased. The amount of bromine required will be increased with the increase of filtration cycles. The amount of bromine required will be decreased with the decrease of filtration cycles. The amount of bromine required will be increased with the increase of bather load. The amount of bromine required will be decreased with the decrease of bather load. The amount of bromine required will be increased with the increase of water temperature. The amount of bromine required will be decreased with the decrease of water temperature. The amount of bromine required will be increased with the increase of pH of the water. The amount of bromine required will be decreased with the decrease of pH of the water.

Add 1 tablet for each 1000 gallons of water. The amount of bromine required in the pool will depend upon the length of filtration cycle. The length of filtration cycle will vary depending on the amount of usage of the pool or spa. Each time the pool or spa is drained and refilled with fresh water, the amount of bromine required will be increased. The amount of bromine required will be increased with the increase of filtration cycles. The amount of bromine required will be decreased with the decrease of filtration cycles. The amount of bromine required will be increased with the increase of bather load. The amount of bromine required will be decreased with the decrease of bather load. The amount of bromine required will be increased with the increase of water temperature. The amount of bromine required will be decreased with the decrease of water temperature. The amount of bromine required will be increased with the increase of pH of the water. The amount of bromine required will be decreased with the decrease of pH of the water.

Add 1 tablet for each 1000 gallons of water. The amount of bromine required in the pool will depend upon the length of filtration cycle.
