DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

BUCSAN 1264 is an effective preservative in many aqueous compositions. The concentration required to give protection depends on several factors. These include the susceptibility of the composition, the temperature, the type and amount of bacterial growth, the extent to which recirculation can be used to perform secondary treatments, and the extent to which recirculation can be used after the initial treatment. The final concentration should be determined by the preserver.

In general, the recommended range of concentrations for BUCSAN 1264 can be found in the technical data sheet.
