Directions For Use

Refer to the Sharpen™ herbicide main label, EPA Reg. No. 7969-278, for complete Directions For Use and all applicable restrictions and precautions. When following the instructions on this supplemental label, the user must have this label and the entire Sharpen container label in possession at the time of pesticide application.

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

Use Information

Sharpen may be applied in the fall as a burndown application in reduced or no-till soybeans for broadleaf weed control (refer to Table 1 in product container label for list of weeds controlled). An adjuvant system (refer to Additives section in product container label for details) is required for optimum burndown activity.

Fall Applications

Apply Sharpen at 1.0 to 2.0 fl ozs/A for burndown broadleaf weed control after the prior crop is harvested. Applications must be made prior to first killing frost. Fall applications can be made to all soil types.

Crop-specific Restrictions and Limitations

- DO NOT apply more than a maximum cumulative amount of 0.089 lb ai/A of safufenacil per cropping season in soybean from all product sources.
- Always use the most restrictive preplant interval of all inclusive herbicides when applying Sharpen as part of a tank mix.
- Refer to Table 4 on the product container label for crop rotation intervals.

Tank Mixtures

Broad-spectrum burndown control of grasses and/or additional broadleaf weeds will usually require a tank mix with a herbicide such as glyphosate. Sharpen may be tank mixed with or applied sequentially with one or more of, but not limited to, the following herbicide products:

- Clarity® herbicide
- Extreme® herbicide
- Prowl® H2O herbicide
- Pursuit® herbicide
- Scepter® herbicide
- glyphosate (e.g. Roundup® herbicide)
