This product is applied in the final sanitization cycle of low temperature dishwashing machines. When to be applied must be clear before application of this product. 

Adjust dishwasher's chemical dispensing device to meter proper amount of product into dishwashing machine. 

For sanitizing tableware in low temperature dishwashing machine, inject SparClean Sanitizer 54 into final rinse water at a concentration of 150 ppm available chlorine. Do not go below this level, or allow concentration to fall below 50 ppm. Do not exceed 200 ppm. Test sanitizer frequently during operation with a chlorine test kit to ensure that solution does not drop below 50 ppm available chlorine.

When sanitization cycle is complete, remove sanitized tableware from the dishwashing machine. All items to be sanitized must be clean before application of this product. Local public health codes may vary with regard to the concentration of available chlorine permitted in this final rinse water of chemical sanitizing dishwashing machines. Check with your local public health department for regulations in your area. Note: Do not use on silver, silver plate or pewter as these metals may discolor. 

STORAGE AND DISPOSAL 

Do not contaminate water sources. Do not use on silver, silver plate or pewter as these metals may discolor.
